SEATTLE, Nov. 27.—When Dartmouth college and University of Wash.

ton football eleven trot out on the gridiron at Washington stadium today for the first time the west coast of the year on the Pacific coast, the team will see two teams built almost on opposite lines. Dartmouth's forward line is light, supported by a heavy back field, while the Washington line is heavy, with light backs.

The Washington backfield averages only 142 pounds, which is topped by the Dartmouth backs by several pounds. The Dartmouth line averages 174 pounds and the backfield 172 pounds. Washington's line average is 184 pounds.

Both teams had a light workout today and the coaches declared all were in readiness for the contest which is expected to attract one of the greatest crowds ever seen at an athletic contest here.

Despite the fact that it has rained all day Friday, the football field at the stadium was reported to be firm and even with continued rain should be in fair condition for play. It was announced last night, nothing short of a deluge could cause postponement of the game.

At the side back is a square-cut panel of the white faced with black, while a satin sash is dropped from the waistline directly at the side, to be turned under with the hem.

### What Is the Secret of Long Life In a Tire, Anyhow?

It's the tread—and here is the reason:  
The tread of your tire is the part that takes all the wear, soaks up the road shock and keeps the bumps away from the fabric.

Entirely reasonable then that it should be broad and thick, isn't it?  
That's the idea back of the Super Tread Tire. It's important and it means a lot more miles to you.
