Don't Give Your Children Ice Water to Drink

Deliciously Cold, Safe Water In Cooler of Automatic Refrigerator

Ice cannot "give off" cold air and properly refrigerate your foods if wrapped in burlap or covered up with newspapers, any more than coal can give heat if banked up with sand.

Do not cover your ice. Permit it to do its work, which is to keep your foodstuffs cold and in a wholesome condition.

We are demonstrating the automatic, a wonderful refrigerator, and showing how cold, dry air circulates constantly; how to prevent food odors from mixing; how an honestly-built refrigerator will save ice, save foods and save doctor bills.

Welcome to the demonstration, whether you need a refrigerator or not.
