INCUBATORS ARE USED IN HATCHING FISH

MARSHFIELD, Mass., June 12.—(A. P.)—Incubators are being used by the division of fisheries and game of the state department of conservation to provide sport for the hunters and food for the people.
 On a farm here pheasants, which in recent years have been growing scarce, have been hatched in large numbers by machine and are being cared for in steam heated brooders until they are strong enough to smelt for themselves. Then they will be turned loose in various sections of the state.
 Experiments ascertain the feasibility of raising pheasants by artificial means, have been underway here for the past two years and this year the work was started in earnest. About 7,500 eggs, some obtained from the station's brood stock and others from private dealers, were placed in the incubators at various intervals. In the course of time 5,889 chicks were hatched and transferred to brooders. As they gain strength they are gradually moved from one house to another, or of lower temperature until finally they reach a pen without any artificial heat.
 To overcome the familiarity with human beings developed during the ten days or two weeks in the brooding houses the last pen is trimmed thickly with small trees and heaps of boughs to provide hiding places. On being introduced into this pen, officials say, the young birds show no inclination whatever to tuck to the underbrush, but after a few days they learn to work their way into the brush, to take cover when startled and to roost at night. About five weeks is required for the birds to become properly feathered ready to take their chances in the woods against hunters.
 The stocking of the woods together with the natural spread of the bird in a few years, officials believe, will go a long way toward meeting the shortage of fowl for human consumption in this state. It is estimated that shippers in the south and west now send \$30,000,000 worth of poultry into Massachusetts annually.

OFFICE CAT

By JUNIUS
 Comes now Jim Sturges, authority on hay stocks, with a suggestion for renaming Cabbage H.H. Jim says the famous eminence should be called Ka-baa-go, with all the "a's" pronounced in the Bostonese fashion; the accent on the second syllable and the last syllable merely sneezed, as in "influenza."

ABOUT THIS TIME 'O YEAR.
