IDEAS FOR HOUSEWIVES

HOME DEMONSTRATION

Milk has been making water.

Sal in it. The lime and phosphorus of meat are in the bones and these are thrown away.

They occur in solution in milk and we eat them.

The hardness and strength of bones and teeth are due to lime and phosphorus. Once formed they are not necessarily permanent.

The food taken by an adult in a year must contain three-fourths of a pound of lime and more than a pound of phosphorus to keep up bone and teeth repair. Many families suffer from lack of phosphorus lime.

Milk is a food. It contains more lime than does lime water. Eat all you will of other foods and it is not likely that you will get enough lime for the bones and teeth. Add one pint of milk per day to the diet and there is sure to be enough of both lime and phosphorus.—E. V. D.

THE FOOD TAKEN BY AN ADULT IN A YEAR MUST CONTAIN THREE-FOURTHS OF A POUND OF LIME AND MORE THAN A POUND OF PHOSPHORUS TO KEEP UP BONE AND TEETH REPAIR. MANY FAMILIES SUFFER FROM LACK OF PHOSPHORUS LIME.
