

# Grand Special Sale of FURS

## Tomorrow Saturday

In our Women's Wear Dept. on our 2nd Floor

### Gordon and Fergusons

Entire line, from St. Paul will be on display at special prices.

It's one of the greatest and best lines of Furs in America and it will pay you to come and look whether you wish to buy or not.

### Save S. & H. Green Stamps

They offer you a saving of about 3 per cent on all of your cash purchases. They'll help to pay your shoe bill, your gas bill, your wood or coal bill, or if carefully saved they'll pay for the gifts you give at Christmas time.

Every new and wanted fur and style is included.

Coats, Coatees, Muffs, Scarfs, Chokers, etc. Don't overlook this opportunity to see the choicest of furs.

**The People's Warehouse**  
PENDLETON'S GREATEST DEPARTMENT STORE  
100 1000 GARDEN WHERE IT PAYS TO TRADE

### It Will Pay You to Trade

with Pendleton's greatest dept. store. We have everything to wear and eat. The best for the price no matter what the price; prompt, courteous, efficient service. Quality merchandise economically priced. Try us and see.

## UNITED STATES BUILDS MANY MILES OF ROADS

WASHINGTON, D. C., Oct. 13.—Fifteen to twenty years of building good roads lie ahead of the United States. Under the program which the country has adopted there will be built, during that time, 180,000 miles of improved highways which will constitute the federal-aid highway system and of equal or greater mileage of state and local roads. When the great job is done, the transportation facilities of the country will far exceed those of any other nation, past or present, in the world. The highways of the ancient Romans, whose name has come down through the centuries will pale by comparison.

Details of this vast road-building program are to be placed before the Highway Education Board at its conference in Washington October 26 to 28, inclusive, by state highway engineers and officials of the bureau of public roads, United States department of agriculture, to whom has been entrusted the work of planning and supervising the construction of federal-aid highways. The plan will be presented to enable the board to proceed authoritatively with its work of devising aids for schools and colleges to which road-builders of the country are turning for competent highway engineers.

Officials of the bureau place the aggregate cost of the federal-aid program alone at about \$3,000,000,000 spread over the twenty-year period. They base this estimate on an average cost of \$17,000 per mile. The average cost, in turn, takes into consideration all classes of improved roadways from the cheapest to the most expensive types. Approximately one-third of the proposed system, or 60,000 miles of improved highways, already are either built or building.

The program is a new one. Up to comparatively recent years, road-building in the United States had been conducted without special regard to a national system. Highways had been constructed where they would link up in the most effective manner with the whole network of roads to be spread over the nation. Engineers had sought more to meet immediate and local demands than the broader requirements of the states and nation.

The present federal-aid road-building program, officials of the bureau state, will contemplate the construction of only such roads as fit into the national program and contribute to the national system.

At the same time the roads will be so selected as to serve the most important local requirements. With backward modifications, the system adopted in building the railways of the country will be borne in mind in the construction of the country's new highways. There will be main lines of highway communication between centers and thousands of miles of feeder roads, reaching back into the more sparsely settled regions and into the rich agricultural sections, to tap areas whose population and products will flow over the new system.

New roads will be planned and built—thousands of miles of them—where they will fit in most advantageously with the entire program. The bureau is continuing its research work into most efficient methods of road-building, including the character and wearing power of materials, resisting qualities of varying soils, etc., and has amassed a considerable store of valuable information all of which will be available for the highway engineer of tomorrow, whom the board is seeking to have educated in practical and modern methods.

## FIREMAN GROOM IS ROUGHLY HANDLED

MANFIELD, Ohio, Oct. 13.—Fred Troll, a city fireman, stationed at No. 1 Engine House here, returned from a wedding trip lasting several days.

The boy at No. 1 Engine House handcuffed Troll, shackled his ankles, wound a one-inch rope around him, made him wear blue spectacles and a dilapidated cap, placed a tin cup in his hands and compelled him to essay the role of a street beggar, while they took snapshot pictures of him and the cards which they placed around him.

As the coins, contributed by passersby, fell into the tin cup the fireman took the money away from troll. One placard announced Troll's wedding. Another that he needed money to buy a baby buggy and a bird cage. The public, seemingly, derived the greatest amusement from a card which announced that "My personal liberty is shot!"

## DYE OLD DRESS OR DRAPERY IN DIAMOND DYES

Buy "Diamond Dyes" and follow the simple directions in every package. Don't wonder whether you can dye or not successfully, because perfect home dyeing is guaranteed with Diamond Dyes even if you have never dyed before. Worn, faded dresses, skirts, waists, coats, sweaters, stockings, draperies, hangings, everything, become like new again. Just tell your druggist whether the material you wish to dye is wool or silk, or whether it is linen, cotton, or mixed goods. Diamond Dyes never streak, spot, fade or run.

## CHRISTIAN SCIENCE LECTURE

By Bicknell Young, C. S. B. of Chicago

Member of the Board of Lectureship of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass.

I come here tonight to speak to you on a Science which rests upon the fundamental facts of being and which in the measure that it is understood is capable of improving, and even of transforming, the life of every man, woman and child. Because it can do this it follows that it can also reform the world, and I am prepared to show that it will do so, just as fast as you and the rest of mankind understand and accept it.

We have been taught to look out for our material needs, and we have been instructed in some of the sciences which are supposed to aid us in administering to those needs, but our thinking, which is the most important thing we ever do, has had no science to govern or exalt it, but has been based upon and fostered by education which assumed and inculcated the theory that matter governs man.

Christian Science reveals the facts and thought governs or misgoverns mankind, as the case may be, including the body, and that as we approach and attain a divine standard, the health and safety of the body are proportionately secure.

Such work is not less scientific than that of sciences which have to do with material phenomena. In fact, to investigate and understand thoughts and their nature and law is the highest kind of scientific research, and is the most interesting and instructive of all studies. Besides this, there are immediate results, visible and practical, to be attained by such a course.

They are often acknowledged by the general public, who do not hesitate to say that Christian Scientists are a happy and healthy class of people. In mentioning this I am not claiming that all that can be desired in these directions has been accomplished, but at any rate, thousands of people who are alive and well today testify that they were saved from death and their health restored through Christian Science.

The apostle says, "your life is hid with Christ in God." Christendom has accepted that saying, but it was not understood and could not be until the science of it was revealed, yet the whole Christian world agrees that God, the immutable creator of the universe, originates, sustains and perpetuates His own creation.

The assumption that life is primarily in matter is not basic enough to satisfy the faculty of reason in man. It limits life and at the same time calls it infinite, and fails to explain what life is, or how, according to such theories, it ever got into such forms. The only philosophy that satisfies in regard to life is found in Christian Science, because Christian Science is not a theory. It shows that life is and must be the self-existent Mind, intelligence, being, which we call God.

This real life, permanent, necessarily perfect, untouched by disease, sin or death, is the only life of man. He does not need any other and could not have any other. But beyond this and above it there is something still greater to be observed, and that is that the infinite Mind, God, which spake and all things were, expresses Himself forever in ideas. It is in the realm of thought that people learn to believe in God, and it is there also that they learn to understand God.

This being so, is there anything extraordinarily mysterious or at all mysterious, in the fact that Christian Science heals the sick through revealing, by means of thoughts or ideas, the nature, the power and the presence of God?

I have asked you to follow along in this course of reasoning for a certain purpose, and that purpose I believe now begins to appear. It is that you may learn the naturalness of health and life and the unnaturalness of disease and death. Perceiving, as I believe you must have done, as we have

gone on thinking this out together, that God does not and cannot include or conceive of a single destructive element or quality, you can see that a better understanding of God will mean more of the presence of God, and will tend to remove destructive elements and incidents from our lives. Thereby health and life will not only be more general, but more permanent.

To the old way of thinking it seems incredible that materially intangible facts should have actual value and influence. Yet the founder of the Christian religion proved beyond all question that diseases even of the most fatal nature could be absolutely healed by the power of the understanding. He taught, however, that such power can only be available to men in proportion to their righteousness, their rightness in every way. He knew and declared that the power to heal is wholly from God, the divine Mind, and he said and showed by his own works that this power is natural to men and women in the proportion of their understanding or enlightenment on the true nature of God and His law.

The Bible is the original revelation of the immortal relationship of God and man. Christian Science makes this relationship understood, and in doing this it removes condemnation and establishes redemption in its stead. It shows beyond all doubt that the only final or possible sequence to a mistake is loving and complete correction. Sometimes our own shortcomings may have retarded the fruition of the desire to have this Science universally understood, and we can only say to you that we hourly repent of them in sackcloth and ashes. But the Science itself, the Science of Christianity, discovered by Mary Baker Eddy, has no shortcomings. Its possibilities for good are immeasurable as its divine Principle, God, is, and we ourselves, though offering no excuses for our failure to be fully worthy, beg you to consider that we are moving in the right direction, that is, onward and upward. With arms extended to encompass mankind, in reverence and adoration to the God who is Love, and in devotion to His Christ, we give you this message of Life, of health, of peace, and we aim to express and make daily more practical in behalf of ourselves and for all mankind the compassion of Him who said, "I am come that they might have life, and that they might have it more abundantly."

## COUNTY FAIR VISITORS GET QUARTERS IN JAIL

MILLERSBERG, O., Oct. 13.—The county fair was on. The town was crowded. Two men applied for rooms at the hotel. The clerk informed them that all the rooms were filled but that they might get good sleeping quarters in the jail.

When they protested the clerk explained that the last prisoners had been released the week before and that the bastille was cleaned up so that, if the visitors to the fair could not obtain rooms elsewhere, they might have a safe place in the jail.

## IF STOMACH IS TROUBLING YOU Instantly! End Indigestion or Stomach Misery with "Pape's Diapepsin."

As soon as you eat a tablet or two of "Pape's Diapepsin" your indigestion is gone! Heavy pain, heartburn, flatulence, gas, palpitation, or any misery from a sour, acid stomach ends. Correct your stomach and digestion for a few cents. Each package guaranteed by druggist.

## Russian Disputes English Claim and Says He Invented War Tanks

MOSCOW, Oct. 13.—A trial court in England decided that Winston Churchill invented the military "tank." Later there was some proof that Kitchener thought of it first. And now comes a Russian, one A. A. Porohovshchikoff, claiming to have invented the tank, to have made a tank and to have operated it long before the date of either British claim.

The priority of Churchill bears the date March, 1916. The Kitchener claim is earlier—October, 1914—but his project was not realized. At the very outbreak of the war, in August, the principal of the tank was put forward in Russia, and before the end of the year 1914 a model was made. On May 18, 1915, a trial of a completed tank was made at Riga and was the subject of war military report (No. 4,563) bearing the date, June 20, 1915.

In the Izvestia office in Moscow are two documentary proofs of this claim. One is a photograph of the tank and the other is a newspaper clipping from Novo Vremya, No. 14, 572, dated September 29, 1914, quoting the military report which describes the tank and its operation. The military report (made June,

1915) is signed by General Kaulbars and reads as follows:

"It is proven that this machine, called 'Vendehol' (Going everywhere), goes over deep sand at the rate of twenty-five versts an hour. At the average rate of speed it has crossed a ravine three metres wide, one and one-fourth metres deep and with sides sloping at an angle of 45 degrees. All considerable roughness of territory it took at full speed. Its turning about was highly satisfactory. In general it could travel on roads where ordinary autos could not go." The report further states: "In view of our lack of technical means the project was sent to England."

Porohovshchikoff was the owner of an experimental laboratory and had previously made some inventions in aviation. In his initial proposal to make a machine which could go without roads he offered two variants, one with one chain and one with two. It is stated that his trial tank contained all the parts now found in the best kind of tank.

**BANDITS ROB MESSENGER**  
KANSAS CITY, Oct. 14.—(U. P.)—Two bandits boarded a crowded street car, held the passengers at the points of revolvers while they robbed a bank messenger of a satchel containing nine thousand five hundred dollars in cash.

## Color Line is Now Demanded By Englishmen

BY CHARLES MCCANN

(United Press Staff Correspondent.)  
LONDON, Oct. 13.—(U. P.)—Restriction of negro immigration into the United Kingdom is demanded by "John Bull," in an article which declares both that negroes are responsible for much of the crime in England and that white women in increasing numbers are associating with them.

American negroes who came over as "jazz" artists, as well as others who come to England to be educated, remain here, the article charges; some of them to become criminals, others to associate with white women.

"If there is one thing more than another about the West End—the white-light district—of London which strikes an Englishman recently returned from overseas with horror and disgust," the article states, "it is the enormous number of negroes and Asiatics of assorted tints to be found parading about, and the lighthearted fashion in which so many white girls enter into close relationship with them.

"Before the war, these gentlemen of color were few and far between. They were mostly to be found in the neighborhood of the docks, and the only white women who associated with them were drink-soaked creatures who had sunk to the lowest depths of degradation. Now, these people saunter about dressed up like dandies, and white girls hang on to their arms.

"Poorly paid London shop girls seem to fall an easy prey to some mysterious glamor which appears to surround a black man, but if they knew the truth, they would not have lost that healthy sense of shame at being seen in the company of a negro which was largely a protection to an older generation.

"Many of these negroes have been imported from America as jazz-drummers and exponents of the barbaric noises which the Yankees are pleased to call music. Others of the colored invaders have been brought here for educational purposes. A very large proportion of them to dot return to their homes.

"Some of them may be found in street markets selling quick nostrums. Others, having acquired a medical degree, set on in the poorer districts as cheap doctors, and many of them are under suspicion of making illegal operations their principal source of income. A large number have been convicted of being concerned in cocaine traffic, and there is scarcely a single apartment feature of the underworld in which they are not involved.

"It is high time restrictions were placed on this colored immigration, otherwise the country will be branded with an ever-increasing population of half-castes."
