

WHAT WILL THE NEXT 15 YEARS OF CANCER CARE LOOK LIKE?

Shortly after her sixth birthday, Katie was diagnosed with cancer. Soon, she'll celebrate her 21st birthday - thanks to the world's first targeted cancer therapy, developed in 2001 by Brian Druker, M.D., now director of the OHSU Knight Cancer Institute.

Now, OHSU is finishing what we started. We're building an army to radically reinvent early detection. To find more kinds of cancer, earlier than ever. To prevent unnecessary treatment. And to save even more lives. Join our cause. Together, we'll help put an end to cancer.

JUNE 5 IS CANCER SURVIVORS DAY.
KATIE KNUDSON IS AMONG THOUSANDS WORLDWIDE LIVING HEALTHY LIVES, THANKS TO AMAZING BREAKTHROUGHS AT OHSU.
