*** Pain * Pins and Needles Sensation * Numbness * Weakness ***

- General Arthritis • Osteoarthritis - Knee, Shoulder, Hips, Ankles, Wrist, Hands
- Bursitis • Tendinitis • Peripheral Neuropathy

The Neuropathy Solution.

Have you been told that medication is your only option for your painful Neuropathy? Are you tired of sleepless painful nights? Are you concerned you might lose the ability to walk, use of hands and fingers, or even lose your limbs? There is now an option that can cure your problem and give you relief from the pain - Stem Cell Therapy! Stem Cells are natural cells found in your body and their job is to heal and repair damaged tissue. Stem Cells can transform into any type of tissue in your body including blood vessels and nerve tissue, both of which contribute to neuropathy. Stem Cell Therapy can heal the damaged blood vessels and heal the damaged nerves, offering a treatment that is curative in nature and not just mask your symptoms like pills do.

Get back to a better quality of life.

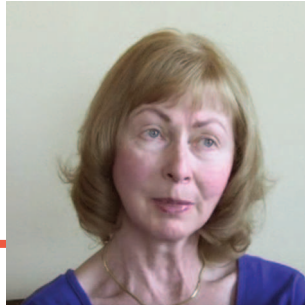

Stop missing out on life, live more pain free and with more mobility and start enjoying the activities you miss: your family, work, gardening, sports and travel. Stem Cell Therapy is a viable option to get you back to loving life.

Scientists have discovered amazing things Stem Cells can do:

- Turn into and create cells that grow cartilage, tendons, discs, and virtually any other tissue in your body.
- Prevent your body's own cells from dying prematurely.
- Communicate with the abnormal cells of your body and "switch" them into behaving normally.
- Prevent and break down Fibrotic/Scar tissue.
- Regulate your immune system, with the potential to turn off Auto-Immune Diseases

"We went to the seminar and decided to have it done and I'm really impressed. I walked a mile the other day and I haven't been able to do that for several years. I would really advise it to anyone who has joint problems."
- Jerry

"I'm 62 and another Doctor told me I need a partial replacement of the knee. I wasn't excited about that and went to Stem Cell Centers. My pain level was between 4 - 5, and now pretty much none. I am very happy!"
- Judy

"Before, the pain would wake me up and I would have to get up and take more pills. The pain has gone from an 8 to a 2, and my blood sugar seems to be a lot improved. I'm a different person. I feel better; when you feel better, you have a different attitude."
- Bill

The Stem Cell Centers Difference.

Stem Cell Centers is a national network of surgeons and top doctors who all collaborate on important research studies on numerous conditions. The results from these ongoing studies help us to determine the best protocols to use to treat patients throughout our network. Our doctors are trained to utilize all the available types of stem cells currently allowed for clinical use in this country. Research indicates that different types of stem cells may have better success in treating different conditions.

What this means for You!

When you come to any of our many Stem Cell Centers across the country, you can expect to receive the proper treatment with the right type of stem cell, AND the correct dosage, giving you the highest chance of getting back to the quality of life you deserve. If you suffer from any of the above conditions, please call today to schedule a free consultation and free medical examination with our medical provider for you or a loved one. We will answer all your questions and provide ample information so that you can make an informed decision on whether this is the right treatment for you.

*Stem cell therapy is still considered experimental by the FDA.
