

SOUTH AMERICA MAY CHALLENGE IN POLO

Argentina Will Be Brilliant Factor In Game In A Few Years, Is Prediction Made.

(By United Press to The Bend Bulletin.)
BUENOS AIRES, Sept. 28.—Mildly objecting because sports publications in the United States call attention to the fact that the Argentines and Filipinos did not compete for the Davis cup, a writer in Nacion, declares that this country will soon be able to show the world that it has no tennis champions, it can produce polo players without superiors.

SEE SMALL DAMAGE TO PRUNE HARVEST

Chief Harm Done Through Too Rapid Harvest Resulting In Fruit Being Left On The Ground.

(By United Press to The Bend Bulletin.)
SALEM, Sept. 28.—Small damage to this year's prune harvest is anticipated unless the rains of the past few days increase in precipitation and frequency, according to county fruit inspectors who have been through the orchards and drying establishments of Marion and Lane counties. Much damage to prunes on the ground was caused last week when growers were so anxious to harvest their crop before rains should commence that shakers far outstripped pickers, leaving quantities of the fruit on the ground. Much of this split open. Fruit still on the trees, particularly where protection is offered by heavy foliage, has suffered but little.

GILBERT BEGINS WORK FOR FIGHT

Fighter In First Class Condition, But Problem of Sweating Off 17 Pounds Is Causing Worry.

Although in the best of condition for his coming bout with Speck Woods on November 10, one point is causing Fred Gilbert no little worry. It's the question of weight, for Fred is signed to weigh in at 143 pounds. The fact that he has not fought for nearly a year, when he lost to Billy Huff of Klamath Falls has given Gilbert plenty of opportunity to take on weight, and it was learned last night that at the beginning of his training yesterday he tipped the beam at 160 pounds. Whether the sweating off of 17 pounds will not seriously weaken the fighter is a question which may cause Gilbert's backers to bet with extreme reluctance. Aside from the matter of weight Gilbert declared last night that he is in first class shape. He has been out of the ring long enough to give the bones of his hand, several times broken, a chance to knit permanently.

KILLED WIFE TO END AGONY

Briton Gassed Woman He Loved, Incapacitated, and Then Ended His Own Life.

"The doctor gives anesthesia to hopeless agony. The soldier spares a farrier or a shot to a writhing comrade. Any decent man shoots his women folk to save them from dishonor."
Such was the explanation made by E. R. Eardley for killing himself and his wife in their little cottage at Southborough, says an English exchange.
Mrs. Eardley was a hopeless invalid, and her disease had developed to the point where it became necessary to place her in a home for the mentally afflicted. In the letter from which the extracts above are made, Eardley said:
"For two years now my wife has lived in hourly torment. Her condition grows daily worse. I can do nothing more for her; my will to live and win is broken. There is nothing before her but the madhouse, without even the alleviation I have been able to bring.
"However human law may regard the matter, my conscience justifies me; indeed, I should live a coward in my own esteem if I failed her in this extremity."
Even in his sorrow Eardley thought of those who would discover the tragedy, and in the letter he wrote to the friend telling him of his determination, he added:
"The bodies of myself and my dear wife will be found together in the little dressing room. Great care must be taken in entering the house; the dressing room and communicating bedroom will be full of gas."
After hearing all the testimony and the reading of the letter the jury found that the dead man took his own life and that of his wife while he was temporarily of unsound mind and added an expression of sympathy with the relatives.

MAY COOL HOMES IN SUMMER

Hungarian Engineer Has Designed Evaporation Scheme to Regulate Temperature.

Americans may soon be living in "ice houses."
The houses will not be the kind in which ice is stored, but a new type of dwelling designed by Leopold Pollak, an engineer and constructor, of Budapest, Hungary. He is contemplating building a house manufacturing plant in Philadelphia so that the public will have a place to escape the sweltering heat without trekking shoreward or northward.
Mr. Pollak said that the houses will be made of insular earth and covered with porous bricks. In appearance they will be similar to those used by the natives of South America, who use "monkey jugs," or water bottles made of pottery, to cool their homes.
The South American natives place in each corner of a room a water jug, and in a few moments, the room is cooled by evaporation. Mr. Pollak does not go into detail about his new plan, but states that he can regulate the cooling of a house in summer in a similar manner as that of heating the same building in winter. He said he can make a home as cool as an ice cellar on the hottest day in the year at a cost of approximately 10 cents a day.—Philadelphia Public Ledger.

FINLAND'S CLIMATE HEALTHFUL

The climate of Finland is rigorous but healthful, marked by long winters and short, hot summers. It lies within the zone of cyclones and anticyclones, which pass over northern Europe from west to east at intervals of two or three days throughout the year, and give variability to the winds and weather. The mean annual temperature varies between the southern and the northern boundary from 49 to 34 degrees Fahrenheit, ranging from 20 to 8 degrees Fahrenheit in January, and from 64 to 62 degrees Fahrenheit in July. The extreme range of temperature is about 110 to 115 degrees Fahrenheit.
The prevailing winds in winter are from the south and southwest and in summer from the north, northwest and west. The amount of rainfall varies from 10 inches in the northern to 25 inches in the southern part, being greatest during August.

NOTICE

Notice is hereby given that the co-partnership heretofore existing between the undersigned under the firm name and style of Pierson & Coble, has this day been dissolved. Peter Pierson succeeds to the business of the firm and all obligations of the firm are to be paid by him and all obligations due the firm are payable to him.
Dated this 27th day of September, 1921.
PETER PIERSON.
ERNEST COBLE.

DOGS GUARD SICILIAN HOMES

"Italian Bulldogs," as They Have Been Nicknamed, Obviate Need for Locks on Doors.

In Sicily the inhabitants have trained dogs to protect their homes against brigands and other lawless characters. These Sicilians on leaving their homes seldom bother to lock doors or windows. They have trained their dogs so well that the animals can take care of the most cunning of criminals.
When a thief enters one of these homes the dog does not attack him. He receives him in silence, even wagging his tail sometimes in apparent friendliness.
But no matter where the thief may go, the dog follows, never losing sight of him for a moment. He follows the thief from room to room. The thief may load himself up with all the loot he likes, but the dog views his thieving with indifference.
It is not until the thief attempts to leave the place that the dog displays any real interest in him. He then becomes remarkably active. He jumps in front of the culprit, barring his way and defying him to attempt to leave.
If the thief makes a break for the door or window the dog is upon him. As a rule the animal springs for the throat, but wherever he sinks his teeth nothing short of death can make him release his hold.
If the intruder attempts to draw a weapon the dog is upon him like a flash of lightning. These dogs have been nicknamed Italian bulldogs, but they are of a mongrel breed with just a trace of the genuine bulldog in their blood. They more closely resemble wolfhounds.—North Clinton Herald.

HEAD BINDING IN SOUTH SEAS

Natives of Tomman Island Cling to a Curious Custom, Which Seems to Savor of Cruelty.

The old men of Tomman (an island of the New Hebrides, South Pacific) told me that heads nowadays are not what they were in olden times, writes Martin Johnson in Asia Magazine. They said what I found hard to believe—that the craniums of their ancestors were twice as long as those of present-day islanders.
Tommanites are not born with long heads, but the head of each baby is bound in order to make the shape of his cranium conform to local ideas of beauty. When he is a few days old, his mother puts on his head a bonnet woven from human hair, which she soaks with oil, until she thinks the little skull is softened. Over this bonnet goes a loose woven basket of coconut fiber. The fond mother pulls the strands of the basket tight, and each day a bit tighter, until the skull can be compressed no further.
When the little Tommanite is about a year old, he emerges from his wrappings with a beautifully elongated, pointed skull, the pride of his mother.

What makes a tire go bad when it looks as sound as new?

A COUNTRY road No garage or repair shop within call! A time perhaps when every minute counts! A blow-out comes! And you thought the tire was as sound as new!
What is it that causes such a tire to go bad? A few years ago four tire experts in the Thermoid Rubber Company decided to find out. They learned that the whole life of a tire hinges on the evenness with which the necessary strengthening materials are mixed with the pure rubber gum. If the resulting compound is filled with "lumpy" formations the tire rapidly weakens and "blows out." If the compound is blended evenly and smoothly, the result is greatly increased wear.
Knowing this, the Thermoid scientists then perfected Croliide—a rubber compound that reduces "lumpy" formations to a minimum—that eliminates premature tire troubles.
Croliide Compound is today used exclusively in the manufacture of Thermoid Tires.
You are invited to call and see these new tires for yourself—also the famous Croliide Compound Tubes.
