Literature.

I do not wish to be understood as condemning the training that helps the student to distinguish between good and bad literature, but I do mean to say that if the reader has not that within which interprets to him the indefinable something which we call genius, it will never be revealed to him by catechisms and anatomical processes. "I hate to be tied down," Tennyson once said, "to say that 'this means that,' because the thought within the image is much more than any one interpretation." — Martha Baker Dunn.

Wireless phones for the boats were successfully demonstrated during the recent Coast Guard meeting in Atlantic City. They were invented and perfected by the Bureau of Standards, which developed the wireless telephones used by American submarines during the war.
