

RECORD IS SET IN RADIO TALK

14,000 Miles Achieved Without Relay

London Amateur Uses Short Wave In Effecting Com- munication With Ship

By Keith Jones
(United Press Staff Correspondent)
(Copyright 1925 by the United Press)
LONDON, Aug. 21.—The world's record long distance radio press interview was held today when I conversed across 14,000 miles of space with Commander Cross of the United States battleship Seattle at Wellington, N. Z.

This feat of aerial communication and journalism was made possible through the courtesy of the famous radio amateur, Gerald Marcuse, who without any pre-arrangement, established in 50 seconds a link by air with the battleship more than half way around the world from here.

The commander aboard the visiting United States battleship in far away New Zealand could hear my voice plainly but he gave his answers in Morse code. The connection was made at 6:30 this morning and I asked the commander:

"Is there any truth in reports of fighting between the American sailors and the New Zealand police?"

"The reports are absurd," came his reply. "There has been no fighting and no rioting whatsoever. The sailors are doing the best they can to enjoy all the festivities bestowed upon them by the people of Wellington."

My next inquiry was as to when the fleet would leave for America, and to this the commander answered:

"Monday."

"Is New Zealand dry or wet?" I then asked him across the miles.

"Wellington is wet both inside and outside; it's been raining all day," came his quick reply, as our interview ended.

Establishment of clear communication across such a tremendous span was viewed by Marcuse as a forerunner of a vast extension in the use of short wave transmission. Marcuse is a veteran experimenter in both short and long wave radio transmission.

For this unique interview with the other side of the world, he used a pole of 75 feet with an aerial of approximately the same length. This required one-half kilowatt power, compared with the 25 kilowatts used by the big stations. Marcuse used a 45 meter wave length for this test.

Mountain Town in Path Of Raging Forest Fire

points in the fire zone.

Spread Is Rapid

Although spreading rapidly in area, the blaze was held from sweeping further in the direction of Pasadena. Dense clouds of smoke hov-

ered over the outskirts of the city. Additional truckloads of volunteers left here for the fire zone this morning to relieve those who have been on duty for 24 hours or longer. Several pump engines and long lines of fire hose were trucked to the scene.

The blaze has already burned a section of the Arroyo Seco, an important water shed on which Pasadena relied for much of its domestic water supply. A number of back fires were started in a desperate effort to prevent further damage in this area.

Hundreds of resorters have fled from their cabins in the path of the flames, taking their possessions with them. Thus far, however, the blaze has been confined to the west section of chaparral and some undergrowth lining the ridge.

DISTANCE IN RADIO MADE AIM OF TEST

Fifty Kilowatts to be Used Beginning Tomorrow

Radio fans of Bend have been invited by the supervisor of the seventh radio district, with headquarters in Seattle, to take part in an experiment which is to be conducted over all parts of North America on the evenings of August 22, 24 and 25.

The experiments will consist of broadcasting by station WGY of 50 kilowatts, the greatest amount of power ever used in the history of regular broadcasting. The highest power now in use in the United States is five kilowatts. Station WGY is located at Schenectady, N. Y.

The purpose of the experiment is to obtain more satisfactory and definite information than is at present available concerning the effect of increased power on the intensity and quality of signals, distances and areas covered, interference caused by other stations, overcoming of summer static, modulation, fading and possible blanketing.

Secretary Hoover of the department of commerce is anxious that all radio listeners report their observations. These observations will be checked with the official findings of the department of radio inspectors, stationed throughout the country, and with the reports of the technical experts of the bureau of standards.

La Pine Private Walks Encroach Upon Highway

Much of the business district of the unincorporated town of La Pine encroaches on the county road, according to information which has been obtained by District Attorney A. J. Moore.

This state of affairs came to light when a La Pine resident petitioned the county court to have a gasoline pump operated by E. L. Clark, removed from the roadway.

The investigation showed that the stores and other business structures were built bordering on the road, which is supposed to be 80 feet wide. After that the sidewalks were built in front of the buildings, and therefore upon the roadway.

Clark states, according to the district attorney, that he will move his gasoline pump when all of the other

THE "WHITE HOUSE SPOKESMAN" SAYS:

Meeting reporters of the various news organizations is one of the daily tasks of the President of the United States. The upper photo shows President Coolidge meeting newspaper reporters on the lawn at the summer "White House" at Swampscott, Mass. In the center of the group and facing the President is Dale Van Every, United Press Correspondent at Swampscott. Inset is President Coolidge walking with W. J. Losh, manager of the Washington United Press Bureau.

When the "White House Spokesman" speaks the whole world listens.

The President of the United States is perhaps the foremost news producer. What the government is doing, to do to all farmers, to collect foreign debts, to relieve taxes—all is news not only along the highways of this nation but also along the highways of every civilized country.

So it is that busy file correspondents of American and foreign press associations and newspapers eagerly await at the press conferences of the President. They are held twice each week, whether he is in Washington or at the summer White House in Swampscott, Mass.

The greatest care is taken to protect the President against evasive questions and misinterpretation because his utterances "for guidance" carry tremendous import.

Pat McKenna, for years the doorkeeper at the White House Executive office places on each correspondent who seeks to attend the conferences. Secret service men flank the President during the meetings.

Nothing he says can be quoted directly, unless he specifically authorizes it. The correspondents submit their questions in writing, in advance of the conferences. The President reads them, ignores those he doesn't wish to consider and answers those he selects for discussion.

Then the President, through the press, speaks to the people and the people, through representative correspondents, question the President that they may learn the government viewpoint on pending issues.

The accompanying pictures reveal United Press correspondents obtaining news from the chief executive head their dispatches appearing in this newspaper and keep informed on what the "White House Spokesman" says.

private property in town is also moved out of the road.

Wasn't Kelly at All, Just Drunk, Say Cops

(U. P. Leased Wire to The Bend Bulletin)
PORTLAND, Aug. 21.—Police continued to watch for traces today of Tom Murray, Elsworth Kelly and James Wilcox, escaped Oregon convicts, with no definite clues to guide them.

It has been definitely established that the man who yesterday posed as Kelly and forced a motorist to drive him all over the city at the point of a gun, was nothing but an impersonator of that desperate individual.

A young fellow, they learned, fortified with moonshine and a gun, made T. T. Herrald haul him about for several hours. There was no motive for the act except an overdose of moonshine.

Police said they know the identity of this man and hope to arrest him.

Hood Forest Fire Seen By Deschutes Lookout

Forest service lookouts this morning reported a forest fire on the north slope of Mount Wilson, in the Mount Hood national forest. Mrs. Hazel McKinney, lookout on Black butte, telephoned to the forest headquarters in Bend that this blaze was "smoking up" considerably.

The fire which broke out in Shevlin-Hixon timber about five miles

the wagon when an electric wire pole was struck. The horses passed in front of the C. D. Brown home, dumping some of the lumber on the Brown lawn. The name of the driver of the team was not learned. He received several scratches when he was thrown from the wagon. The team was caught east of the river.

Team on West Side Runs, Leaves Lumber on Lawns

Frightened by the rattle of lumber on the running gears of a wagon which they were drawing, a team of horses yesterday afternoon raced down West Fifth street to Newport avenue, finally breaking loose from

Your
Work.

The Zenith Saves Clothes

The Zenith will wash an ordinary tubful of clothes in from four to five minutes, or the greatest dirt-caked overalls in eight to ten minutes. Why do you want a washer that will wash in four minutes? Because a fast washer means a clean washer. Because you save the clothes by saving three-fourths the wear in the tub. The quicker the clothes come out of the washer, the less they will be worn by rubbing against each other and the metal parts of the machine, and the less they will deteriorate from the prolonged effects of soapy water. You can prove that this is an actual saving by comparing the amount of lint in the water which is drained off from the Zenith and from any other washer. The Zenith washes the dirtiest lazes gently and safely.
