

# TRIO ISOLATED CLOSE TO CITY

## Brothers Live on Crib Far Out in Lake

## Cleveland Water Intake Is Visited by Few in Course of Year

Cleveland (AP)—The Holzworth brothers live only five miles from the center of this bustling city of a million and in view of its full sweep, but are isolated almost completely from the contacts and excitements of metropolitan life.

The brothers—Harry, Art, and Eddie—live lonesomely upon the "crib" which perches atop the intake of the city's water system in Lake Erie.

Each "gets to town" seldom oftener than once every six months.

Their only companions are a flock of chickens, numerous flies and spiders, and a radio.

As their only duties are to turn on the beacon at night, sound the fog horn when the weather is thick, and in general keep ships from hitting the crib, the brothers have much time on their hands. They read detective stories, play cribbage, and scan the outdated papers brought them by the harbor boat, visiting them twice a month with supplies.

Living quarters for the brothers are several large, barn-like rooms. They have an old-fashioned stove in the kitchen—and an electric refrigerator.

"Not that we would object to an old fashioned ice box," Eddie said, swatting a fly on his shirtless back, "but the ice man just doesn't come out this way."

On the wall of the room where the nightly cribbage game is played, the brothers have hung a picture of the late Jean Harlow, a tinted picture of St. Cecilia, a photograph of the Dionne quintuplets.

Tending the crib is a family tradition with the Holzworths. Their father kept the beacon burning and the fog horn sounding its warning for fifteen years. When he died, Art came out to the crib to carry on. Then Harry joined his brother in 1917, and Eddie started in 1929.

The big yearly event for the brothers is Christmas, for it is then that their long isolation ends, and they come to the mainland for a big Christmas dinner. For a few months—until the shipping starts and the big ore boats move again toward Lake Superior—they remain ashore.

Only one Christmas have they missed. That was in 1928, when a gale made it impossible for the tug to bring them ashore for turkey and presents.

The waves, whipped by a strong winter northwester, broke over the 60-foot structure, coating it with ice. The crib, to most Clevelanders, is just a squat, orange-colored structure on the northern horizon. They judge the visibility by it, but most of them have little knowledge of its purpose or inhabitants.

"But we do get some visitors," Harry said. "Some of 'em are just curious, and a few yachtsmen sail out their boats. And every so often a swimmer, with a boat, comes out, to see whether he can go the distance to shore. But mostly there's just Eddie, Art and I—and the chickens and spiders, of course."

When Christmas comes around again, the brothers will pack up and go ashore as usual, back to the city, bright lights, shows, and people.

"And what are their plans for the few months among the glittering attractions of urban life?" "We'll play some cribbage, I guess," Eddie said. "And maybe listen to the radio."

## Oregon State College to Issue History of School

Corvallis, Ore. (AP)—A historical survey of Oregon State college, to be called the "Orange and Black" will start rolling off the presses here about November 1.

The book will be the first of its kind ever printed in Oregon, and will contain a complete history of the school since its founding in 1928. Similar books have been published by only three Pacific coast schools—Stanford, University of California and University of Southern California. Dick Gearhart is editor.

**MARITAL PACIFIER READY**  
Omaha, Neb. (AP)—Juan Valencia, 28, and Doris Haden, 23, are sure they will live happily. The couple was married in a radio studio and an electrical transcription was made of the ceremony—including an audible kiss. When trouble brews in the Valencia household, the record reminds them of "love, honor and obey."

## Dudrey Motor Co. Offers Models for 1939

## NEW OLDSMOBILES DISPLAYED TODAY

Three smart new Oldsmobiles for 1939, two sixes and an eight, were placed on display today. In Bend the new cars are being shown by the Dudrey Motor company.

Among the high points of interest in the cars with which Oldsmobile starts its 42nd model year are:

1—Addition to the line of a brand-new six cylinder car which brings Oldsmobile quality to the low price field.

2—Introduction on all models of the "rhythmic ride," a new perfection of roadability and riding comfort resulting from quadri-coil springing in combination with four separate stabilizing factors built into the chassis.

3—Attainment of perfect steering geometry through a new hook-up employing a relay link with twin tie-rods of equal length, termed "dual center-control steering."

4—Introduction of handi-shift as standard equipment—a replacement of the conventional gear shift lever by a short, horizontal manual shift arm on the steering column.

5—Continuation as an optional extra on all models of Oldsmobile's automatic safety transmission which provides important added advantages in performance, operating economy and ease of control.

## JUSTICE IN INDIA

## U. S. TO BUY PRUNES

Cleveland (AP)—A 300-page "memorandum" suggesting ways to eliminate "unnecessary and rest-disturbing city noises" has been compiled by directors of the university center board of commerce.

New Delhi (AP)—A woman told a magistrate at Sarh, India, that her husband knocked her out by hitting her on the head with a live chicken. The husband was ordered to pay his wife 10 rupees (\$3.75) compensation.

San Jose, Cal. (AP)—Local prune growers have been notified the federal government will purchase 50,000 tons of California's surplus dried prune crop for \$2,750,000.

## U. S. Produces Fourth of World's Oranges

Berkeley, Cal. (AP)—Out of a total world production of 200,000,000 boxes of oranges annually, the United States is now producing slightly more than one-fourth of this amount, a survey of the orange industry by the University of California reveals.

Approximately 97 per cent of the more than 50,000,000 boxes produced annually in the United States are from California and Florida, the former producing 62 per cent of the total and the latter 35 per cent. Texas, Arizona, Louisiana, Alabama and Mississippi are the other orange producing states.

In California, oranges are produced on approximately 46,000 farms, comprising 238,000 acres of orange trees in more than 30 counties.

The survey said that consumption of oranges in the United States has increased steadily with the rise in production. During the decade following 1925 the consumption increased from 19 to 26 pounds per capita.

On the other hand, the consumption of other fresh fruits decreased on a per capita basis. Apples, especially, appear to be losing ground to oranges, the survey said.

London (AP)—A picture of a smell was the sensation of the annual exhibition of the Royal Photographic Society of Great Britain here.

Actually there are two pictures, "portraits" of the perfume of a lily and the smell of camphor. They look like nothing on earth, but that they are actually photographs of odors is vouched for by the catalogue, by officials of the society, by the French exhibitor, F. Breitenback, and by Prof. H. Devereaux, the French scientist whose investigations are thus represented.

This is the official explanation: "The emission of an odor involves volatilization of material. If an odoriferous material is enclosed in a cell close to a clean mercury surface, it is possible to collect on the surface of the mercury a monomolecular layer of the volatilizing or odoriferous substance.

If the mercury surface initially is covered with tale powder, the gradual formation of the monomolecules lay-
