Critical fire danger noted

Foresters today warned that Central Oregon woods face a critical weekend because of decreasing humidity and continued high temperatures, with no precipitation in sight.

Humidity readings as low as 11 per cent have been reported from parts of the Deschutes woods. Daytime temperatures have been high for more than a week and there has been little recovery of fuel moisture in the woods at night.

The result, foresters cautioned, is a highly inflammable condition, aggravated in some areas by tinder-dry grass.

The five-day forecast, received this morning from the Portland weather office, calls for above normal temperatures over the weekend, with the mercury expected to reach 90 or above daily.

The Central Oregon forecast calls for "little or no precipitation" in the five days.

Daytime temperatures in Central Oregon have been uniformly high this past week. Highs of 88 were recorded in Bend in the past three days.

Bend temperatures have reached 80 degrees or above daily for the past 13 days.

Young readers are given pins

The Library Club of America met in the children's library Wednesday morning with David Deeks presiding and 16 members present.

The president awarded membership pins to Mark Hughes and Karyl Yancey, and honor club pins to Dennis Koho and Karyl Yancey. Membership pins are awarded to those who read four books, while honor club pins are awarded to those who have read an additional six books.

To give the members of the club some idea of how the Indians ground corn, an old stone pestle and mortar from the library's Oregon Room were displayed. Also from the Oregon Room were displayed a stone hammer held to its wooden handle with leather fastenings, the handle decorated with bead work, and some Indian basketwork.

Perhaps the most interesting exhibit of Indian material displayed at any of the club meetings, was shown at the meeting this Wednesday. It was a framed exhibit under glass of Indian sandals made of woven sagebrush bark. The sandals were found in the Fort Rock country a few years ago, and according to tests by nuclear chemists, they are 9000 years old.

Thus they claim that the Indians who made them were among the very first shoemakers in history. The display was loaned to the Library Club by Mrs. Eugene Myers, who said that the sandals found in that Fort Rock cave were mentioned in an article in the National Geographic Magazine of August 1958 entitled "How Old Is It?"

This next week is the last week of the reading project about Indians. A new reading project will be announced at the next meeting to be held July 26 at 11 a.m. daylight time in the children's library. All boys and girls who will be in the fifth, sixth or seventh grades this fall are welcome to come to the meetings and enjoy the fun.
