# Can you average 42 good shaves from each razor blade?

—500 shaves from every dozen blades?

**H**OW many *satisfying* shaves do you get from one razor blade before it begins to pull and scrape?

On the first day, when the blade is fresh, your shave is smooth and cool. But very soon your beard begins to dull the edge. Soon the pulling and scraping become unbearable. You throw the old blade away — slip a new blade in your razor — and begin the same round again.

### The real reason that blades grow dull

Under a microscope, a razor edge is seen to consist of hundreds of tiny teeth. When these teeth are in alignment, the blade is sharp. But the very first shave with a new blade bends these teeth out of alignment, and the blade begins to lose its edge.

With most safety razors, there is no way to smooth the delicate teeth back into alignment. The original smooth, fine edge of the blade grows rougher with every shave.

Today there is *one* safety razor that gives you a fresh, keen edge for every shave. With the AutoStrop Razor you will get 500 cool, clean shaves from every dozen blades—an average of 42 *satisfying* shaves from each blade.
