You were taught at school that your body undergoes a complete change of structure every seven years.

This tearing down and building up process of body tissue continues without a moment's pause throughout life.

And when a man gets into a physical condition that the tissees keep breaking down and wasting away faster than Nature can replace them, right then he begins to grow "old".

This doesn't necessarily mean, however, that he has reached an advanced age. reached an advanced age. Thousands upon thousands of people begin to break down, their vital organs giving evidence of fast approaching decay, long before they reach middle age simply because they fail to give Nature, at the proper time, the needed help to rebuild.

If you are beginning to show the slightest sign of a physical 'let-down'—if you are losing your old time "pep" vim and vigor—if high tension energy and nervous atrain are begin-ning to tell on you—it's a sure sign that you are growing "old" sign that you are growing "old"
