Surely there must be better glasses for near and far vision

If you are tired of scowling over reading glasses; if you are tired of fussing with two pairs of glasses (one for near vision and one for far vision); or if you dislike to wear ordinary conspicuous bifocals that make you look old, you should investigate Kryptoks.

KRYPTOK GLASSES
THE INVISIBLE BIFOCALS

Kryptoks (pronounced Crip-tocks) are made for people whose eyes need help for both near and far vision. The Kryptok lens combines near and distance vision in one pair of glasses, yet you cannot distinguish them from single vision glasses. Kryptoks represent the best that science can do to give back to eyes that are growing old the perfect vision of youth.

Call and let us tell you more about Kryptoks.
