SAMSON

Heavy Draft Horsepower
 The Final Achievement In a Heavy-Duty Tractor at a Remarkable Price---\$1005

When the engineers and designers developed the SAMSON Model "M" Tractor, two things were uppermost in their minds: First, plenty of horse power at the draw bar for the lowest possible first cost and upkeep; second, an abundance of reliable, steady belt power that will do every heavy-duty belt power job on the farm or ranch.

They have accomplished both these things to perfection in the SAMSON Model "M." Here is a tractor that will take the place and perform the duty of a barn-full of horses, without costing you a fortune or a big part of your crop to buy or maintain.

The even distribution of weight, compact unit design, and low center of gravity, give to the SAMSON great stability, making it hug the ground and preventing all danger of rearing up or tipping over.

The SAMSON Model "M" is the last word in modern, down-to-the-minute tractor construction. It is not like the average I-beam and channel steel frame tractor that weighs so much that it takes a large percentage of its own power for self-propulsion.

It is a close-coupled power unit all by itself, from radiator to rear wheels. Every part is enclosed and protected against dust, mud or rain.

For further details about the wonderful SAMSON Model "M," see or write us for FREE booklet which contains valuable and surprising information about maintenance cost of the SAMSON compared with horse upkeep.
