How to Make Pine Cough Syrup at Home

Pine is used in nearly all prescriptions and remedies for coughs. The reason is that pine contains several elements that have a remarkable effect in soothing and healing the membranes of the throat and chest. Pine cough syrups are combinations of pine and syrup. The "syrup" part is usually plain sugar syrup.

To make the best pine cough remedy that money can buy, put 2½ ounces of Pinex in a pint bottle, and fill up with home-made sugar syrup. Or you can use clarified molasses, honey, or corn syrup, instead of sugar syrup. Either way, you make a full pint—more than you can buy ready-made for three times the money. It is pure, good and tastes very pleasant. You can feel this take hold of a cough or cold in a wey that means business. The cough may be dry, hoarse and tight, or may be persistently loose from the formation of phlegm. The cause is the same—intamed membranes—and this Pinex and Syrup combination will ston it—usually in 24 hours or less. Splendid, too, for broughial asthma, hoarseness, or any ordinary throat allment.

Pinex is a highly concentrated compound of genuine Norway pine extract, and is famous the world over for its prompt effect upon coughs.

Beware of substitutes. Ask your druggist for "2½ ounces of Pinex" with directions, and den't accent auvithing else. Guaranteed to give shou late satisfagtion or wency.

'State-Wide' Telephone Service

Our efforts are constantly directed to the extension and improvement of "state-wide" telephone service. Large and small communities are dependent upon each other, commercially and socially. Good telephone equipment in the cities and towns of Oregon, with good construction and wellmaintained "long distance" pole lines and wires between, mean their mutual convenience and profit.

The value of any telephone is proportionate to the number of other telephones which may be connected with it. In Oregon there are approximately 138,000 telephones connected with our system. Ideal telephone service means the prompt connection of any one of these with any other and the least possible loss in strength and distinctness in the conversations that follow.

Our entire plant is engineered and constructed with the object of rendering a satisfactory "state-wide" service sufficient in facilities available and with these facilities efficiently maintained. For this purpose the telephone equipment must be better, local and trunk wires must be of proper size and type, and central offices and switchboards must have additional apparatus to accommodate and care for the long distance circuits.

Before the troubled period of the war we always aimed to maintain "spare" or reserve plant — that is, plant ahead of immediate needs, thus ensuring prompt and more satisfactory compliance with demands for service as they arose. During the war this reserve was exhausted as the materials we use were reguired and properly taken by the Government and those industries given priority consideration.

With the reconstruction period, as is the case with all other lines of business, our problems have continued to an unexpected degree. We are still hampered by shortage of materials and delayed deliveries.

-We realize the requirements of our long distance patrons. We have a comprehensive and well-defined program designed to provide additional toll circuits sufficient to meet the present and constantly growing demands.

The Pacific Telephone and Telegraph Company
