My baby is fourteen months old and as I had nursed him this took all my strength. . . . I thought about Cardui and sent for a bottle—began to take it again. My . . . had never come back on me since my baby came and my back ached like the toothache at times. Shortly after I began to take Cardui again, my . . . came back on me again and I have been better ever since. . . . Now I never felt better in my life."

Mrs. Moxingo was advised by her friends to take Cardui. Now she herself "wants other women to know what a wonderful medicine it is." Ask those who have taken Cardui. Then be sure to try it yourself.—Adv.

### GREENS THAT TEMPT THE FICKLE APPETITE THESE SPRING DAYS

Mother Nature, prodigal in all her offerings, provides many Spring greens by way of tonics for that "tired feeling." These delicious greens may be found by those who search and may be had for the gathering or digging. Unfortunately, we cannot all dig. Many of us have to accept our greens through the medium of shops and other avenues. But for those interested, a harvest in nearly all localities awaits the digger.

A bit of wild onion or garlic chopped in the salad will revive the jaded Spring appetite. Dandelion is perhaps the most generally liked spring green and is at its prime as soon as the young leaves are well above the ground. The leaves are capable of so many uses that it is not surprising to see how eagerly they are sought. Washed and cut in with the salad, stewed and creamed, cooked and panned as we do spinach, or chopped and added to an omelette are a few of the ways it is delicious.

Watercress rides on the crest of numerous brooks and streams, even in the overflow from springs, and is a delightful Spring salad material. If unavailable in some sections, watercress, which is a land cress with rosettes of glossy leaves, may take its place. Up-land cress is a cousin of the others that resembles chives, which may be cultivated in the garden later in the season with the other salad greens.

Garden greens are quite different from wild greens. They include beet and turnip greens, Swiss chard, New Zealand spinach and several so-called "pot herbs." Chard and spinach have one advantage in the fact that their tender shoots may be pulled and cut without pulling up the plants. This makes the plant practically perpetual producers.

# \$12,000,000 Invested For Your Comfort

To make your home or your office comfortable and attractive—to provide every convenience in the way of furnishings—an investment of \$12,000,000 has been made in furniture factories in the Pacific Northwest.

Sponsored by the Retail Furniture Association of Washington in cooperation with the Furniture Manufacturers of the Pacific Northwest

A gigantic industry as compared with other industries of the Pacific Northwest is the furniture manufacturing business. Its factories, if combined would require 200 acres of ground. The total floor space needed would be about 8,712,000 square feet.

Exactly 296 salesmen are constantly at work disposing of Northwest-made furniture to the retail merchants.

Salesmen and executives of the various furniture factories operate 268 automobiles for traveling and business use.

The total insurance carried by the factories covering fire, liabilities, etc., amounts to \$7,700,000.

See window display of Northwest-Made Furniture

The extent of this industry is so little known by the people here that the manufacturers and retailers of the Pacific Northwest have designated a week to be devoted to a presentation of Northwest-made furniture.

During the week of April 21 to 26 there will be displays of all the various kinds of Northwest-made furniture. You are urged to go and see them. Then when you need furniture for any purpose, you will know what to buy and where to buy it so that your own community and yourself may profit by the transaction, for whatever is good for the community is good for you.
