"Id as soon turn in my dog"

"Turn her in? Why should I? That old Ford is as good as she ever was. I'll get three years more work out of her anyway before she's through."

"Lubrication's the answer, of course. I've noticed that since I switched to that new Zerolene 'F' for Fords she runs like a clock and seems to have a bit more power too."

Zerolene "F" for Fords, the new Standard Oil Company lubricant developed especially for Fords, gets to all the bearings requiring lubrication—especially the wrist-pin bearings and the upper half of the cylinder walls that are frequently oil-starved when an unsuitable lubricant is used.

Zerolene "F" for Fords is made by the Standard Oil Company's patented vacuum process. It deposits a minimum of carbon, and because it lubricates better, enables the engine to develop a considerable margin of power over and above what you're accustomed to expect from your Ford.

And it costs not more, but less than most of the special Ford oils now on the market.

A Ford is an A-1 transportation investment. Protect your investment by proper lubrication.
