ROASTING CAN MAKE OR SPOIL THE FLAVOR OF COFFEE

Hills Bros.' Patented Process Removes Risk of Ruining Roast—Assures Always

Roasting determines the flavor of coffee. Too much or too little can cause dissatisfaction. But there is a perfect degree of roast! Hills Bros. invented and patented a process that insures that degree for every pound. It is called Controlled Roasting.

As the accuracy of the hour-glass depends upon an even, continuous flow... a little at a time... so a perfect, unvarying degree of roast is secured for Hills Bros. Coffee by Controlled Roasting—the patented process that roasts evenly, continuously... a little at a time. The rare blend passes through the roaster in a steady, unvarying stream. And instead of guessing—as is necessary with ordinary, bulk methods—Hills Bros. control the temperature of the roast automatically. Every berry is perfectly roasted. As a result, every pound has a matchless, unvarying flavor.

To keep this delicious coffee fresh, Hills Bros. pack it in vacuum cans. Air, which makes coffee go stale, is removed and kept out of the cans. Ordinary "air-tight" cans won't keep coffee fresh. But Hills Bros. Coffee can't go stale. Order some today. Ask for it by name, and look for the Arab trade-mark on the can.

Hills Bros. Coffee, Inc., Portland, Oregon.
