Strikes to Affect Supplies of Sugar

New York, May 12 (AP)—Sugar supplies for 1947 probably will be affected by the coal and steel strikes, and the resultant loss in fertilizer production, B. W. Dyer and company, sugar economists and brokers, reported today.

Sulphate of ammonia, production, derived from coke in the process of making steel, has been cut from about 950,000 tons to 750,000 tons for 1946, the sugar firm reported.

Puerto Rican cane, California beet and other sugar producers will be affected. "Puerto Rico's supply of this fertilizer is expected to be reduced from 85,000 tons to 60,000 tons. The 1947 Puerto Rican sugar crop would thus be about 100,000 tons less than would otherwise be the case," the Dwyer firm stated.
