NOW 3 OUT OF 4 TELEPHONE ORDERS FILLED IN A MONTH

In some fastest-growing areas the wait still is long—but we're making steady progress

1. Installers have been working fast the first half of 1949... keeping up their pace of the postwar years. Here in the West, 145,000 new telephones will have gone into service in the first six months of the year. Although new orders keep pouring in, we're able to take care of them faster. Seventy-two per cent are filled within thirty days—that's practically three out of four.

2. Hundreds of miles of telephone cables have been going in at a fast clip. But these voice-highways are still bottlenecked in some places—in many of our fastest-growing areas, practically no telephones can be installed for months... until the lines and other facilities can catch up with the mushrooming demand. The telephone picture looks better... but it's not yet all we want it to be.

3. Nearly a million and a half tiny soldered connections must be made before new equipment like this can begin working in a medium-sized office. But we're hurrying all we can to make the waiting time shorter still. Your telephone needs are very real to us and we won't be satisfied until everyone... everywhere in the West... has more and better telephone service than ever before.

4. Huge sums of money have gone to work in the West to make this new equipment possible—and your own telephone more valuable. Millions must come—not from telephone bills—but from people who put their savings into the telephone business. To attract these dollars, we must pay a reasonable amount for their use. This depends on the sale of our services at fair and adequate prices.
