Shaw Undergoes Second Operation

Luton, England, Sept. 21 (AP)—Playwright George Bernard Shaw today underwent a second major operation at the hospital where he has been recovering from a broken thigh, the British Press association reported.

The agency said the new surgery was designed to relieve a bladder and kidney condition which began to trouble the 94-year-old Irish-born dramatist after he was first operated on for a fractured thigh.

Shaw broke his thigh in a fall in his garden.

After the thigh was operated on Sept. 11 Shaw was pronounced in good condition. However, the bladder condition shortly afterward caused his physicians some concern.

At that time Shaw was treated for the kidney and bladder ailment—described by the hospital as "a worsening of long-standing difficulty"—without surgery.
