# More Proteins For Better Health

Doctors find that many older adults and children, too, would improve in health by a diet containing more proteins.

In children a lack of proteins in the diet causes poor appetite, irritability, frequent stomach upsets, pallor, and susceptibility to infectious diseases.

Older adults with low protein diets are apt to be subject to constant fatigue.

You should not change your diet at will however, the advice of a physician is most important in determining a well balanced diet for you.

Depend upon a reliable druggist to supply any medication your doctor recommends.
