Atomic Sub Seen as Surface Navy's Doom

Washington O.R. — Some splitting atoms in the ancient volcanic wastelands of Idaho may have signalled the ultimate doom of surface navies.

That at least is the way some experts read the news that the world's first version of a nuclear engine for submarine has "gone critical" at the Atomic Energy Commission's Arco Oda, reactor testing station.

The AEC's announcement does not mean the engine actually is producing power. But the engine's atomic boilers have been fired up, so to speak, and power will result when the experts in charge decide the time has come for the big test.

Lebanon Firm Wins Citation

Lebanon — For the second consecutive year a Lebanon firm has received a national citation for employment of the physically handicapped. Less than 12 such awards are given in Oregon annually.

The award will be presented to Cascades Plywood corporation at a public ceremony in the near future by J. Richard Smurthwaite, veterans' employment representative for the state of Oregon.

Announcement of the winning was made Monday by Charles Wilson, manager of the local employment office, who directed the recent local participation in the state-wide "employ the physically handicapped" program.

Last year Santiam Lumber company received the honor

here. Wilson said the award is based on six factors utilized by employers to fit handicapped persons to jobs they can handle, the training the company offers such persons, the percentage of handicapped employed by the firm, and the effort the company makes to keep the handicapped as employees on the payroll and adjusted to their work.

Statistics were submitted to the state office three months ago by the local committee, and in turn were sent to Washington, D. C., for national selection.

The "fall line" divides South Carolina into a coastal plain and a piedmont section.
