Without Touching a Tool You Can Get Up To 15% More Power From Your Engine

Shell Premium Gasoline with TCP, the greatest gasoline development in 31 years, neutralizes lead and carbon deposits that cause pre-ignition and misfiring.

All of today's gasolines contain deposit-forming compounds. In automobile engines, these deposits of lead and carbon steal power two ways: In combustion chambers they get so hot they set off the fuel mixture prematurely. The explosion hits the piston "on the rise"—before it reaches the proper firing position. This means power wasted, not used. The name for this is pre-ignition, and it happens most often when more power is actually needed—in passing or climbing a hill.

With your first gallon, TCP additive starts to break through the power barrier set up by lead and carbon deposits. It "preproofs" the hot spots in combustion chambers, preventing pre-ignition. Power works for you again! It changes the deposits on spark plugs so they no longer short-circuit. You get a full spark again—the plug fires every time. Your engine smooths out and the fuel pays off in power.
