grams address student safety through prevention and intervention

Prevention occurs by preventing youth from making decisions that might jeopardize their personal health and safety or the safety of others. Intervention involves intervening in a situation when health or safety of a student or health or safety of others is involved.

Activities sponsored by OSSOM members are scheduled for the year and include: a campaign against drinking and driving, especially during the holiday season; the teaching of refusal skills to elementary grade students; a three-onthree basketball tournament promoting drug-free activities; a coed softball tournament; and, a fund raising button sale.

## Free BP/Sugar testing offered

Over the next few months Mountain View Hospital and Nursing Home will be converting to a new more efficient computer system. According to Frank Krueger, the hospital's controller, the new system will allow the District to pro-

tatives had to search for the information on print out sheets. Not only was the old system time consuming and combersome, bills did not always reflect the current status of the patients account.

Another benefit cited by Krueger

new system is fully operational, admitting time should be cut significantly. This will be especially true for patients previously admitted to Mountain View since most of the required information will already be on the system. All of these

# Warning: The Surgeon General has determined that cigarette smoking is dangerous to your health

Cigarette smoking is a major factor leading to heart disease. The link between cigarette smok-

ing and lung cancer and chronic lung disease has been known for years, However, knowledge of the link between cigarette smoking and diseases of the heart and blood vessels is more recent.

Each year, nearly one million Americans die of heart attack, stroke and related disorders-more than all other causes of death combined. And nearly 40 million Americans have some form of these diseases.

#### Smoking and the Circulation

We do not fully understand everything about how cigarette smoking increases the risk of heart disease. We do understand the effects of both the nicotine and carbon monoxide on the heart and blood vessels.

When you smoke a cigarette, the nicotine makes the heart beat faster. As a result, the heart is forced to work harder and needs more oxygen. To make things even worse, the carbon monoxide from the tobacco smoke cuts down the amount of oxygen carried in the blood to the heart.

#### Hardening of the Arteries (Artherosclerosis)

Hardening of the arteries is a build-up of fatty deposits on the inner walls of the arteries. This narrows the blood vessels. The heart must then work harder to pump blood through the narrowed blood vessels. This is a major cause of heart attack and stroke.

Smokers are more likely than non-smokers to have hardening of the arteries of the heart and the main artery. Also, the disease in smokers is more likely to be worse than in non-smokers.

#### **Smoking and Peripheral** Vascular Disease

Smoking is a major risk factor of peripheral vascular disease. This disease is a narrowing of blood vessels which carry blood to the leg and arm muscles. If a blood clot blocks an already narrowed artery, then the result could be the damage or even loss of an arm or leg.

Most people with this disease who develop some form of blockage are smokers. People who stop smoking can reduce the severity of the disease. Also, if surgery is required, it is more likely to be successful in people who stop smoking.

person who does not smoke. And heart attack in later life seems a by continuing to smoke after a heart attack, the person's chance for a second attack increases.

#### Angina Pectoris

Angina pectoris is a condition in which chest pain occurs as a result of the heart muscle not getting enough oxygen. Cigarette smoking reduces the amount of oxygen going to the heart muscle and makes the heart beat faster, thus needing more oxygen. In this way, cigarette smoking can reduce the amount of activity a person with angina can do before the onset of pain.

#### **Heart Disease and Chronic** Lung Disease

Smoking is the main cause of chronic lung diseases (chronic bronchitis and emphysema). These chronic lung diseases put additional pressure on the heart and may result in heart failure when heart disease is also present.

#### Smoking and the Birth **Control Pill**

Women who use the pill have a greater risk of having a heart attack than women who do not use oral contraceptives. A combination of using the pill and smoking cigarettes increases a woman's risk of heart attack even more.

#### **Smoking and Teenagers**

The earlier a person begins smoking cigarettes, the greater the risk to the smoker's health in future years. As a teenager, the risk of

### Ways to quit smoking

Throw out all cigarettes by breaking them in half and wetting them down. Clean out all ashtrays in your home, office, or car and put them away. Discard matches; hide lighters, or give them away.

When the urge to smoke hits, take a deep breath. Hold it a second, then release it very, very slowly. Taking deep, rhythmic breaths is similar to smoking, only you'll inhale clean air, not poisonous gases.

Exercise to help relieve tension. Climb stairs rather than take the elevator, park the car a block or two from your destination and walk the rest of the way. At home, practice touching your toes, jog in place, do jumping jacks.

When tempted to reach for a cigarette, think of a negative image about smoking. Select your worst memory connected with the habit-the time you burned a hole in your suit or when you were left completely breathless running for a bus that pulled away. Imagine this experience for 15 seconds whenever the urge occurs.

very remote danger. However, even teenagers begin to develop signs of disease, such as coughing, decreased stamina and a fast heart rate. These conditions will worsen and may develop into heart disease or chronic lung disease as the person continues to smoke.

#### Low Tar and Nicotine Cigarettes

NO CIGARETTES ARE SAFE. The low tar and nicotine cigarettes are not as bad as those high in tar and nicotine. However, the risk of death by heart attack is still greater for smokers of any cigarettes than for non-smokers.

In addition, many smokers in switching to lower tar and nicotine cigarettes, smoke more and inhale deeper to make up for less nicotine. As a result, the smoker is exposed to more of the other harmful substances in the smoke which may increase the risk of disease.

#### Why you should stop smoking now!

When you stop smoking, regardless of how long or how much you have smoked, your risk or heart disease will be reduced eventually. Ten years after quitting, the risk of death from heart disease is almost the same as if you had never smoked. It is important to stop smoking before the signs of heart disease appear. The risk of heart attack will not return to normal after heart disease has occurred, but still it will be lower. Don't wait until you have heart disease, STOP SMOKING NOW.

cess data in-house which will eliminate the use of Portland based firms printing patient bills. Krueger said the new system allows each of Mountain Views' account representatives the ability to pull information up onto the computer screen at their desk. Prior to converting to the new system, account represen-

Officials also said that once the weekdays.

# **Cigarettes linked to deaths**

According to the World Health Organization WHO, an annual average of 2.5 million people die prematurely from tobacco-related diseases.

Cigarettes are linked in developed countries to 80 percent of all deaths from lung cancer, 75 percent of deaths from chronic bronchitis and 25 percent of deaths

from heart disease, according to raise taxes on tobacco products. WHO Advisory Committee on Smoking and Health expert Dr. Judith Mackay.

on Smoking and Health, experts transport and health care facilities, urged governments to protect nonsmokers from other's smoke, ban smokeless tobacco and regularly

They emphasized that all countries should work towards establishing smoke-free environments in all At the Sixth World Conference enclosed places especially work sites, schools and child care facilities.

Mountain View Hospital and Nursing Home account representatives between 8:30 a.m. and 5:00 p.m. even greater risk.

Diabetes is a major risk factor for peripheral vascular disease. Diabetics who smoke cigarettes are at

**Smoking and Heart Attack** 

Cigarette smoking is one of three major risk factors of heart attack. The other two are high blood pressure and high levels of fat (cholesterol) in the blood. Cigarette smoking increases the risk even more in persons who also have high blood pressure and/or high blood cholesterol. The risk of heart attack increases with the number

of cigarettes smoked.

Persons who smoke a pack of cigarettes a day have more than twice the risk of heart attack than a person who has never smoked. And the risk for a smoker of more than a pack of cigarettes a day is three times greater.

Smokers who have a heart attack have less chance for survival than a

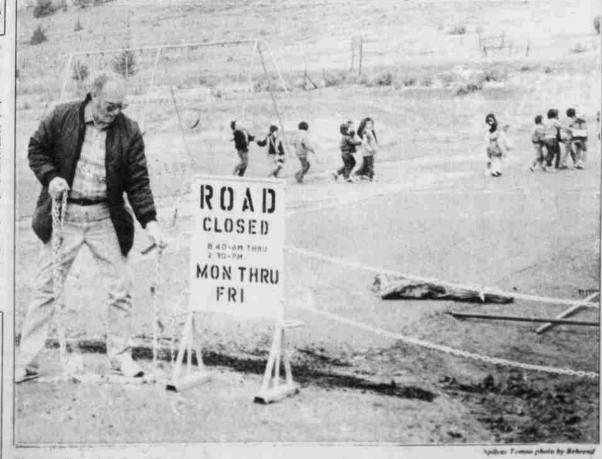

Reward yourself with oral substitutes in the same way you may have used eigarettes. Good examples: sugarless gum, lemon drops. pumpkin or sunflower seeds, apple slices, carrot sticks, unbuttered popcorn and stick cinnamon.

Eat three or more small meals. This maintains constant blood sugar levels, thus helping to prevent urges to smoke. Avoid sugarladen foods and spicy items that can trigger a desire for cigarettes.

Scramble up your day and change habits connected with smoking. Drive a different route to work; eat lunch in a new place; leave the "scene of an urge." At home, avoid your "smoking chair" after dinner, reach for gum rather than a cigarette when answering the phone.

Cleanse your body of nicotine. Drink liquids-lots of them. Water (6-8 glasses a day), herbal teas, fruit juices and caffeine-free soft drinks all fit the bill. Pass up coffee, caffeinated soft drinks and alcohol, as they can increase your urge to smoke.

Keep your hands-and mind-busy. Work on a crossword puzzle, knit a sweater, balance your checkbook, fix something around the house, shampoo the dog. Keep your fingers busy with a straw or a toothpick.

Dale Spencer, Warm Springs Elementary custodian, barrricades the road west of the school. The barricade ensures student safety while they are on the playground.

### Teenagers seek treatment

Although the number of youths drinking alcohol and taking drugs has declined since the high level use during the 1970's, more youths are seeking treatment for alcoholism.

Approximately 3.3 million teenagers between 14 and 17 are showing signs of developing serious alcohol-related problems, says spokesman for Freedom '87, a national

conference on addiction. Robert Bombay said, what worried addiction experts was not the overall number of young drinkers but the core of excessive abusers. Overall, numbers are going down but many youths are showing alcoholism problems.
