Fire and Safety personnel submit biographical sketches

The following personality sketches were written by members of the Warm Springs Fire and Safety crew. In reading these pieces, we hope our community will become better acquainted with those responsible for providing emergency services.

Karla Bagley-Tias

by Karla Bagley-Tias

Back in 1986 the ambulance was called to my home for my son who was having a seizure, by the time we were at the hospital, I felt like I needed the ambulance more than he did. I got to talking to some of the other members of the Fire Department and they encouraged me to take a first aid class so next time I would know what

One thing led to another and next thing I knew, I was a full volunteer

Unruly conduct may halt activity bus

"A convenience and privilege which our children enjoy in our school is in distinct danger of being withdrawn," says Education Services director Tedi Tanawasha.

The Activity bus is a special run

furnished by the Tribe to accommodate those students whose study obligations or participation in athletics and activities requires students to stay at school longer than the regular school day.

Unfortunately, actions and behavior on the part of some of the individuals riding the bus are inappropriate. In fact, this conduct could lead to a concern for the safety

of all riders. **Education Services urges parents** to assist in curtailing this behavior. "Please speak to your children about our concern, which we are confident you share," commented Tanewasha in a memo sent to parents earlier this

Unless there is a positive change in the riders' conduct, the Activity bus services will be terminated.

High school sets visitation

Madras High School has four community visitation days set for this school year. October 5, December 6, February 8, and April 26. There is one each school quarter. The community visitation day is a time when parents an community members can come to Madras High to see classes, student/teacher interaction and other activities first-hand.

and I was hooked. I took my EMT I class and never in my life dreamed that I would be doing this. When I graduated from High School I had no idea what I was going to do with my life. Once your hooked on EMS, there is no turning back. Just being in the middle of it all, helping people and the lights and sirens, its so exciting I

wouldn't trade it for anything.

I am now an EMT IID and am about to start my Paramedic class. Once I'm through this class that's as far as it goes. This will be the last challenge and a tough one. The class is one year long every Tuesday and Thursday night, plus many, many hours of practical time.

I'm glad this career found me, I enjoy helping people whether it be finding a lost child or putting on a band-aid. I plan to stay here as long as I can and not get burned out.

I wake up from a semi-conscious sleep to the loud tones of a Medical call, I jump out of bed and into my boots, grab my radio and out the door to the ambulance. As I am rubbing the sleep out of my eyes, I try to concentrate on the excited voice from my radio giving me the most important information. That time it was a vehicle accident about 20 miles away. We arrive at the scene, cut away the car from the patients and send a small child and its mother away with AirLife. I finally slow down and think about what I had just gone through and wonder if that child will survive. The next morning the family calls and thanks us for being there when their family was in need of help. They say that if it wasn't for the crew's actions, the small child would not be alive today.

This brief replays is something very familiar to all the medics at this department.

Greetings to my people once again! This is Miss Warm Springs,

Starla Green

Starla Green. This time I am writing to you as a member of the Warm Springs Fire & Safety department.

When I go out on a call similar or different than this, I have to stop and analyze what I am really doing. I say I am too young to be in this field, but after I receive a call or a thank-you letter from the patient or their family member, I know exactly why I am in this helping service. When I tell the story of when I enter that burning room of someone's house, my family says I am crazy for doing it. They question why and I too, ask why. But when I see that family is able to return

to their home, I know why I do it.
I came into this department at the age of 18, fresh out of high school, and from there I was hooked. When I left to college, I entered an Emergency Medical Tech I class. I got my Basic Firefighter and other certifications dealing with this field. At the age of 19, I was hired on as part-time and continued to come home on weekends to pull shifts. Since I have graduated from college, I have continued to work in the EMS/fire field, even though my degree is in Criminal Justice. Beginning in September, I will be entering a Paramedic class which lasts until June of 1995. Through this class, I will be able to serve and give back to my community in a way that I know how. I want to be there when someone calls for help.

The only answer I have to the question of "Why?", is somewhere within my heart. It is something that I cannot put in words, it is something that I experience. When I receive that word of thanks or even that smile of gratitude, I know why I do it. So when you see that medic or volunteer within the community, tell them thank-you. Because we all give up our life to give another person another day or just another hour of life.

by William J. Bagley

I was born in Lebanon, OR on December 26, 1964 to William & Linda Bagley. At the time, my father was attending Oregon State University. We moved to Cupertino, CA so my father could finish his education in Electronics, soon after he went to work for Hewlett Packard. A few years later and after some social problems with "city life", we came home to Warm Springs.

I finished school in Madras while living in Warm Springs with my mother, Linda Bagley and younger brother & sister, Donnie Bagley & Karla Tias. I worked for Fire Management for one season. The next year (1984) I went to work for Warm Springs Forest Products Industry in the Plywood Plant. There I worked seven (7 1/2) and a half years. After leaving WSFPI, my sister Karla had me interested in volunteering for the Warm Springs Fire & Safety. From there things just kinda snowballed. Before I knew it, I was back in school attempting to get my EMT I certificate and going to training with the rest of the department.

I became very interested in this field of work. After a great deal of time and effort I was hired last year as a part-time employee. On October 1, 1993, I was brought on full time.

Today I am working as a Fire-Medic. I received my EMT I and I am currently a EMT II-D. My future goal is to upgrade to a Paramedic. My firefighting will also be subject to upgrading from my current level of "Basic Fire Fighter" to "Firefighter I" this year and working towards "Firefighter II" in the years to come. All these plans (hopes & dreams) are affected by availability and cost. I can make the time and provide the effort to commit myself to finish something that I have already started. There is so much to learn and so many outside influences on what to do like time, availability and the most important "MONEY" to continue

I am looking forward to working in this field knowing it is not just a job, it's a way of life. Living in Warm Springs, making this place a home for me and my family. I think working

for Fire & Safety is the best way I know to give something back to the community.

William Bagley

Fire/Safety offers training

The Tribal Safety Committee is sponsoring a short safety seminar on Thursday, October 6, 1994. Steve Geigle of the OR-OSHA Training Division will be the instructor of the three-hour course. He will be covering topics on Hazard Identification and Control in the workplace. This will be at the Fire Management Training Room from 9:00 a.m. to 12 noon and the cost is FREE. This course is open to anyone interested in workplace safety.

Roadwork nears completion

Tired of bumpy roads and dusty walkways on the Campus? The days of inconvenience and travel at a crawl are coming to a close as work is nearly completed on the Campus street renovation.

According to project superintendent Dick Souers, final paving will be done as soon as the contractor is available (within the next two weeks). Souers estimates it will take two days to pave the affected streets. Souers said driveways at the post office and police department still need to be

Souers added that it has been

difficult to keep crews at the site, as contractors are trying to finish other jobs out of the area.

Also under Souers' supervision was the chipseal project. The last of the chip sealing was completed September 27. Crews completed 15 miles of reservation roads, from Warm Springs to Kah-Nee-Ta, West Hills, Tenino, Kot-Num toward Tenino Apartments, and up Hollywood to the trailer court. While chip sealing, the crew also surfaced the road at the new Greeley Heights addition for Chilkat, the local contracting company owned by Kelly and Pinky

article is being reprinted as Astoria, Oregon, Barbara Omaha, requested by Leslie Thomas. He Ojibwa Indian of Minneapolis, and the Sundance group did not perform the Sundance in Switzerland as stated in the first article. Spilyay Tymoo apologizes for any inconvenience.

Enrolled Member of the Confederated Tribes of Warm Springs, Leslie Thomas traveled to Leysin, Switzerland to attend an International Retreat July 22 through August 5, 1994.

The retreat was sponsored and hosted by Emaho, a Native American from Santa Cruz, California. Emaho is a shamen (medicine man) who performed the Fire Dance. Special guest speaker Lama Tharchin Rinpoche performed sacred prayers and ceremonies.

Those who traveled to the retreat were Linus Redfeather, Lakota Indian of Pine Ridge, South Dakota, Michael and Jill Two Feathers, Lakota Indians of Horse Creek, California, Sam Fast Buffalo Horse, a Blackfeet Indian of Montana,

The 4th Annual Warm Springs

Women & Wellness Conference is

scheduled to be held October 5-8,

1994 at the Warm Springs

Community Center (2200 Hollywood

Boulevard), Warm Springs, Oregon.

This year's theme is "The Rites of

Minnesota, Brightstar Collier, Apache/Choctaw Indian of Bend Oregon and Leslie Thomas, Yakama/Wasco/Warm Springs Indian of Bend, Oregon.

The group accommodated approximately 250 people in the Sweat Lodge Ceremonies which went on for 17 days, 2-3 lodges per day. There were four men's lodges which held 10-15 people. Two very large women's lodges which held 30-70 people. One powwow was also held for the participants as well as one sweat, and mini powwow for the children.

Their audience consisted of people from all over the world but mainly they were German and French natives. Thomas was glad he was able to travel to Europe and share with the people there. He was able to do a little sightseeing as he viewed Lake Geneva, saw many acres of vineyards, and the salt mines of Bourg-Saint Pierre.

Department secretaries Monday through Friday, 8:00-5:00. Distribution date is to be announced.

When head lice a problem, treat quickly, thoroughly

Summer is over, and many children are returning to group settings, such as day-care and school. Because many of us think of this time as a "fresh start", the fall is a good opportunity to consider how to deal more effectively with the problem of head lice.

Head lice are not only a recurring problem, but they cause considerable anxiety and disruption to children, parents and professional child-care providers alike, since this infestation can be difficult to prevent and eradicate.

Despite the frustration that many feel when it comes to coping with head lice, this problem can be greatly reduced if child-care providers anticipate outbreaks before they occur and have a carefully thought out protocol in place for preventing and

dealing with it. The National Pediculosis Association (NPA) suggests that this protocol should establish head lice control policies, make sure that staff know how to identify signs of head lice, emphasize prevention, inspect their facilities to reduce the chance of spread (for example, hat should be tucked into coat sleeves and children shouldn't share clothing or headgear). establish procedures for dealing with outbreaks, and prevent new outbreaks.

Parents are often confused and frustrated about head lice and childcare policies regarding this problem, so protocols should be made clear to

parents in advance of any outbreak. To make sure that parents understand the policy, centers might want to distribute a copy to all parents and even have them sign and return a

Warm Springs Early Childhood **Education Head Lice Policy**

All ECE classrooms do routine head checks on all children Mondays and Fridays. Head checks may also be done if staff observes a child frequently scratching their scalp or if the child complains of itchiness.

As a certified Child Care/ Preschool Facility, ECE complies with State requirements for the exclusion of children with communicable diseases. Head lice/ Nits falls in that category

1) A child with Head lice and/or Nits will be excluded by an ECE program supervisor, pod supervisor, Parent/health coordinator or Social Service coordinator. Parents/ Guardians will be contacted and expected to pick up their child right away. The exclusion form will be attached to this hand out and given to the parent/guardian upon arrival.

Children with head lice/nits will be excluded from ECE until they have received treatment and no evidence of lice or nits in their hair can be found. Children can be readmitted by an ECE program supervisor, pod supervisor, and the Parent/Health coordinator or Social Service coordinator. The signed readmittance form should be returned

to the child's classroom staff so they know the child has been checked. 2) The second time a child is

excluded for Head Lice/Nits a suspension warning notice will be attached to the exclusion form along with this handout.

3) Each third time a child is excluded for Head Lice/Nits, within a six (6) month period, a suspension notice will be attached to the exclusion form and this handout. A child excluded three (3) times within six months for Head Lice/Nits will be suspended from ECE for a period of one week to allow the family enough time to complete the treatment

and resolve the problem. Families with three Head Lice/ Nits exclusions will be referred to the Public Health Nurse for support, education and assistance. The suspension form and the readmission certificate must be signed by the Public Health Nurse for an excluded child to return to ECE.

Fever, mouth blisters symptoms of illness painful, a child with this illness should blisters may also appear on the palms

Though it hasn't made the headlines, an outbreak of something called "hand, foot and mouth disease" is epidemic in various parts of the US and a number of readers have inquired

about just what this illness is. It may sound like something that affects cattle, but in fact hand, foot and mouth disease typically affects infants and older children, and it most often occurs in the summer and fall months. It is caused by a family of viruses called Coxsackie (named after the town in upstate New York

where they were first discovered). What is it? The illness usually begins with a moderate fever, but it gets its unusual name from the parts of the body it involves: small, round blisters develop inside the mouthusually on the tongue and the inside of the cheeks, but they can also appear on the lips, gums and roof of the mouth. Small round fluid-filled of the hands, the soles of the feet and between the fingers and toes. The blisters begin to break in about

one or two days, leaving shallow sores. About one-quarter of children also develop a rash, especially over their buttocks.

The blisters appear in a variety of places, and the illness can last for almost two weeks. However, the major problem for most children is the mouth sores, because they depress the child's appetite and make chewing painful. Apart from that problem, the illness is not considered serious.

How is it treated? As is true for other illnesses caused by viruses, antibiotics are of no help. If the fever makes the child uncomfortable, it can be treated with fever-reducing and pain-relieving medications (such as acetaminophen—Tylenol and other brands). Though eating may be get plenty of fluids, and they usually prefer cold liquids or frozen juice pops or ice cubes.

How is it prevented? The viruses that cause hand, foot and mouth disease are spread through contaminated feces, water or food and the viruses are also spread by droplets produced by a cough or

Prevention is difficult, because there is no vaccine, and during epidemics, the viruses are so widespread that it is hard to avoid contact with them.

However, like other infections that are spread by hand-to-mouth contact, frequent hand washing may substantially reduce the risk of a child developing this common, nonserious, but distinctly uncomfortable illness.

The Warm Springs Women & Wellness Conference is sponsored by Community Health Promotion,

Human Services General Manager, Women, Infants, & children (WIC), and Children Protective Services.

There are no fees, it is free of charge. For more information about the conference contact Marci Clements or Judith Charley at (503) 553-3291.
