To the users of Grand Ronde Community Water Association

Results from the last round of routine samples show the presence of total coliform bacteria. Indicators point to the springs as the potential problem area. We have inspected the concrete cisterns at the springs, and one shows signs of deterioration. We have shut down this spring and will continue to monitor water quality as directed by the Health Division, and keep the users posted. Even though there is no health threat, we are required to publish the following statement from the State Drinking Water Program:

"Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems."

If you have questions regarding this, please call our office at 503-879-5624. ■
