Novel Coronavirus

Fact Sheet

What is novel coronavirus?

Novel coronavirus (COVID-19) is a virus strain that has only spread in people since December 2019. Health experts are concerned because little is known about this new virus. It has the potential to cause severe illness and pneumonia in some people and there is not a treatment.

How does novel coronavirus spread?

Health experts are still learning the details about how this new coronavirus spreads. Other coronaviruses spread from an infected person to others through:

- the air by coughing and sneezing
- close personal contact, such as touching or shaking hands
- touching an object or surface with the virus on it, then touching your mouth, nose, or eyes

How severe is novel coronavirus?

Experts are still learning about the range of illness from novel coronavirus. Reported cases have ranged from mild illness (similar to a common cold) to severe pneumonia that requires hospitalization. So far, deaths have been reported mainly in older adults who had other health conditions.

What are the symptoms?

People who have been diagnosed with novel coronavirus have reported symptoms that may appear in as few as 2 days or as long as 14 days after exposure to the virus:

What should I do if I have symptoms?

Call your healthcare provider to identify the safest way to receive care. Let them know if you have traveled to an affected area within the last 14 days.

Who is at risk for novel coronavirus?

Your risk of getting COVID-19 relates to your exposure to the virus. To minimize the risk of spread, health officials are working with healthcare providers to promptly identify and evaluate any suspected cases.

Novel coronavirus (COVID-19) Fact Sheet — continued

2

Travelers to and from certain areas of the world may be at increased risk. See wwwnc.cdc.gov/travel for the latest travel guidance from the CDC.

How can I prevent from getting novel coronavirus?

If you are traveling overseas follow the CDC's guidance: wwwnc.cdc.gov/travel.

Steps you can take to prevent spread of flu and the common cold will also help prevent coronavirus:

- Wash hands often with soap and water. If not available, use an alcohol-based hand sanitizer
- Avoid touching your eyes, nose, or mouth with unwashed hands
- Avoid close contact with people who are sick
- Stay home while you are sick and avoid close contact with others
- Cover your cough or sneeze with a tissue, then throw it away. If you don't have a tissue, cough into your elbow.
- Clean and disinfect objects and surfaces that you frequently touch.

Currently, there are no vaccines available to prevent novel coronavirus infections.

How is novel coronavirus treated?

There are no medications specifically approved for coronavirus. Most people with mild coronavirus illness will recover on their own by drinking plenty of fluids, resting, and taking pain and fever medications. However, some cases develop pneumonia and require medical care or hospitalization.

WHO SHOULD GET TESTED FOR HEPATITIS C?

All adults age 18 and older should be screened for hepatitis C virus at least once according to updated guidelines from the Centers for Disease Control and Prevention (CDC).

“The CDC guidance is necessary to increase the screening and surveillance of hepatitis C so that we can identify, treat and cure hundreds of thousands of Americans who don’t know they are living with the illness and are unknowingly passing it on to their loved ones,” said National Viral Hepatitis Roundtable Director Lauren Canary. “Especially at a time when liver disease and other underlying illnesses place thousands at increased risk of COVID-19, it is more important than ever to increase the screening and treatment of hepatitis C.”

If you haven’t been tested for hepatitis C, ask your doctor!!

GET TESTED AND GET CURED

How to Nurture a Child’s Mental Wellness.

1. Actively Listen Before Offering your Advice.

Ex: Get down on your child’s level & give your full attention to them.

2. Be Patient

Ex: Take a few deep breaths or step away for a moment when you find yourself losing patience.

3. Share your Feelings & Validate Theirs

Ex: Honor what your child is saying or expressing about their experiences.

4. Tell the Truth

Ex: Always search for a way to tell the truth. When you are honest with them, they will be honest with you.

5. Model Healthy Behavior

Your children are always watching, and while what you tell them is important, your example has a stronger impact on them

This information is provided to you by the Indigenous Project LAUNCH (Linking Actions for Unmet Needs in Children’s Health). The purpose of this grant is to foster culturally responsive models to support and promote the wellness of children and families
