W. L. DOUGLAS

\$3.00 SHOES \$3.50

THE REASON I MAKE AND SELL MORE MEN'S \$3.00 & \$3.50 SHOES THAN ANY OTHER MANUFACTURER IS BECAUSE I GIVE THE WEARER THE BENEFIT OF THE MOST COMPLETE ORGANIZATION OF TRAINED EXPERTS AND SKILLED SHOEMAKERS IN THE COUNTRY.

The selection of the leathers for each part of the shoe, and every detail of the making in every department, is looked after by the best shoemakers in the shoe industry. If I could show you how carefully W. L. Douglas shoes are made, you would then understand why they hold their shape, fit better, and wear longer than any other make.

My Method of Tanning the Soles makes them More Flexible and Longer Wearing than any others.

Shoes for Every Member of the Family, Men, Boys, Women, Misses and Children.

For sale by shoe dealers everywhere.

CAUTION: No name printed on bottom. Fast Color Eyelets Used Exclusively. Catalog mailed free.

Pure Wholesome

Those who believe in quality use

KC BAKING POWDER

25 Ounces for 25 Cents

Made from pure, carefully tested materials. Get a can on trial. You never saw such cakes and biscuit. They'll open your eyes.

Good Blood

Means good health, and Hood's Sarsaparilla has an unapproached record as a blood-purifier.

It effects its wonderful cures, not simply because it contains sarsaparilla but because it combines the utmost remedial values of more than 50 different ingredients. There is no real substitute for it. If urged to buy any preparation said to be "just as good" you may be sure it is inferior, costs less to make, and yields the dealer a larger profit.

Get Hood's Sarsaparilla today. In small liquid form or in chocolate tablets known as Sarsatabs

Great Britain imports annually from New Zealand over 60,000,000 rabbits.

Only One "BROMO QUININE" That is LAXATIVE BROMO QUININE. Look for the signature of E. W. GROVE. Used the world over to Cure a Cold in One Day. 25c.

The eggs of the Algerian locust yield a rich oil, which burns well.

Sore throat leads to Tonsillitis, Quinsy and Diphtheria. Hamlin's Wizard Oil used as a gargle upon the first symptoms of a sore throat will invariably prevent all three of these dread diseases

Stem-winding watches were the invention of Noel in 1851.

To Enjoy

the full confidence of a Well-Informed of the World and the Commendation of the most eminent physicians it was essential that the component parts of Syrup of Figs and Elixir of Senna should be known to and approved by them; therefore, the California Fig Syrup Co. publishes a full statement with every package. The perfect purity and uniformity of product, which they demand in a laxative remedy of an ethical character, are assured by the Company's original method of manufacture known to the Company only.

The figs of California are used in the production of Syrup of Figs and Elixir of Senna to promote the pleasant taste, but the medicinal principles are obtained from plants known to act most beneficially.

To get its beneficial effects always buy the genuine—manufactured by the California Fig Syrup Co. only, and for sale by all leading druggists.

AGRICULTURAL

Farm Machinery.

In what kind of a shell are your farm machinery and tools? asks the Chicago Weekly Inter Ocean. Many farmers have a big machine shed with the sky for a roof. This is a roomy house, but it has the disadvantage of being leaky when it rains, and water is not the best thing for wood and iron.

So many complain that net profits of farming are small. No wonder, when they are compelled to purchase a new blinder or cultivator nearly every summer. These machines ought to and will last for many ears if properly cared for.

Now is the time, if it has not already been done, to get all tools and implements carefully stored away in a dry building. On rainy days or at odd times all the wood and iron work should be coated with oil or axle grease to prevent rust and decay. This will not only make them last longer, but will keep them bright and sound for immediate and satisfactory use when they are taken out next spring. Rusty wheels and bearings will not run smooth, and the rusty plow is a vexation when the new season opens for rush work. A cent's worth of oil and a minute's work now will save an hour's work of scouring and swearing next spring.

Men who get rich and have money to lend make it a point to prolong the life of their farm implements by sheltering them and keeping them well oiled and painted. Why not you?

Overcrowding Chickens.

The great loss each year from overcrowding runs up into thousands of dollars. This can easily be remedied by spending a few cents each for a number of piano boxes. Two gunny sack partitions may be put in these boxes, and each one will accommodate several hundred small chickens. Fifty small chicks is the largest number that can safely be housed together. Most overcrowding is found in brooders, and the most common mistake made is not to consider the rapidity with which a chick develops and hence the necessity of more spacious quarters. The secret is to separate the chicks into small lots and never to let them pile up. Overcrowding results in lack of exercise, food and drink, which means bowel trouble and other diseases. Lack of pure air weakens their system; it is better to cull out half of your flock and raise the remainder in health and vigor than to overcrowd them and suffer the loss of your whole flock. Keep the quarters clean to rid them of mites and lice which sap the life out of them in a short time.

Never allow the young stock to be confined in houses and yards that are occupied by old birds, as they tramp and run over them, and thus stunt their growth. Stunted chickens are like stunted pigs—no good at all; they may pull through to maturity, but they can't develop into healthy birds.

New Type of Horseshoe.

If horses had means of expressing their thanks they would probably unite and send a resolution of gratitude to the Pennsylvania man who invented the horseshoe shown in the sketch. And humans who have seen the patient beasts sliding about on slippery streets in desperate and often vain efforts to keep their feet will hope that the invention is a financial success. The horseshoe has a series of parallel ridges on its heel and toe portions. The ridges on the toe portion run parallel to the longitudinal axis of the shoe and those on the heel portion run transversely. These ridges form a series of recesses adapted to receive and retain snow or dirt, thus forming a bearing surface for the shoe and making the horse surer of his footing. Running in opposite directions, as they do, the corrugations act as a sort of brake in which ever way the animal's feet may happen to slip, and the whole effect is to prevent snow or dirt "caking" on the flat of the shoe.

Simple Gopher Trap.

Make a box from boards or slats 8x10 inches and 2 feet long. At one end make a door and hang it at the top with leather hinges. Make the door to that it will open inward at the bottom and so that when shut it cannot be opened outwardly. Make an opening in the bottom of the door A-shape, and large enough that the gopher can push his nose through, and when in the box the door will fall behind him and you have him. Place the box at the mouth of the hole so that he cannot get out without going into the trap.—Farm and Home.

The Silo Theory.

After a series of painstaking experiments, for which he is noted, Professor Hoecker of the Minnesota station affirmed that there is a misapprehension among the siloists about the quality and feeding value of silage by the presence or absence of ears on the stalks. The general opinion is that the silage is made more valuable by developing the grain. That is, a stalk without an ear will not store up as many units of feed nutrients as it will by forming an ear. This total, of course, includes the ear. Thus the effort is made everywhere to introduce a large growing corn and induce earing. The professor has found that the stalk that has never shown an ear—if left until mature—is the same as another similar stalk supporting the ear. This is not an argument to go back to some variety of corn; it is only this: the ear is not essential if full development and maturity of the plant are secured before silaging. The fact was also found that the "expense" of digestion was much less to the animal where the food solids were in the structure of the plant than when in the grain, though the latter was "assisted" by the condition of the succulence as contrasted with grain dried. The discovery opens up new lines of culture. Shall we plant thicker to get more fodder; cultivate a little deeper to arrest too rapid growth and assist in promoting earlier and perfect maturity, which includes, of course, the maximum amount of nutrition?

Long-Distance Farming.

A city man wants to run a big farm by means of a foreman who will execute orders sent him from the city office. He asks persistently: "Why cannot this be done?" The asking of the question is evidence that our friend does not understand farming and could not direct the work to best advantage even if long-distance farming were a feasible thing. The practical farmer knows the difficulties. He knows his plans change continually as weather changes and as plants and animals develop. He is watching, thinking and modifying his plans according to changed conditions. He makes progress by having some things forced upon his attention through daily contact. He gains expertise by daily experience. No man in a city office can farm successfully unless he goes to the farm almost daily or else has a foreman who is competent to do more than execute orders. The man who actually manages must be on the ground. — Alva Agee, in National Stockman and Farmer.

Sheep Rack for Inside Feeding.

This form of rack can be fixed permanently along the wall of the passage

The Feeding of Dogs.

A dog should not be fed on meat alone under any consideration. Besides making him a nuisance it makes him naturally carnivorous and often savage. If he is always fed at the conclusion of a certain meal—dinner, for instance—he will wait patiently until the prescribed time. It is a good plan to feed after one's midday meal, giving plenty of green vegetables, bread and potatoes, with a very few scraps of finely cut meat, the whole well mixed and some gravy poured over it. If two meals are given, one should be at breakfast time and one in the evening. One should consist of only a little oatmeal and milk or a piece of dry dog biscuit. At no time should the dog have more than he will eat, and if he leaves anything his allowance should be reduced or a meal omitted.—Journal of Agriculture.

Commercial Value of Cornstalks.

After numerous experiments the chemists of the Bureau of Forestry and Plant Industry assert that paper can be made from cornstalks by very nearly the same process employed in making it from wood pulp. Moreover, they are confident that when machinery has been perfected the cost of making paper from cornstalks (at present such paper costs about a dollar a ton more to make than wood pulp paper) will be a little over half what it is now.

Two grades of cornstalk paper have been made, a white paper made from the outside shell of the cornstalk, and a yellow from the pith. It has taken fifty years to develop the present methods of making paper from wood pulp. Dr. H. S. Bristol, the head of the bureau, believes that when proper machinery is built and the farmers realize that a good revenue may be derived from the sale of cornstalks, paper will be manufactured from the new material at half the present wood pulp paper.
