WILL WED AGAIN.

Princean Stephanie, Widow of Archdule Rudolf, to Marry a Count.

Princess Stephanie, whose approaching marriage with Count Lonyay, a nobleman of Hungary, has been announced by the Austrian emperor, will go to her husband with a dowry suitable to her rank. Stephanie is second daughter of King Leopold of Belgium. She was born May 21, 1804, and on May 10, 1831, she was married to Archdule Diede Rudolf, son of Em-Princess Stephanie, Widow of Arch-

PRINCESS STEPRANIE.

peror Francis Joseph and heir to the imperial throne. When her husband died, in Japuary, 1889, the chance of the archduchess to be empress passed away, and she has lived in quiet ever the state of the chance of t since. Her sister Louise, who married Prince Philip of Saxe-Coburg-Gotha, is noted for the extravagance if not the insanity of her character, being as wild in her ways as Stephanie is the reverse. The future wife of Count Lonyay is 35 years old and quite pretty. Her flance has adapted the Roman Catholic faith.

Fond aunts and grandmothers are always looking for something new for the baby. Every woman has grown tired of knitting and crocheting the old reliable worsted sack, and every one with the slightest experience knows that these same worsted sacks are a delusion and a snare after the first washing.

Everybody knows how great the success of the Japanese kimono has been this last year, and it struck some doting female relative of a worshiped cherub one day that a kimono on a cherub one day that a kimono on a very small scale might be a good idea. No sooner thought of than acted upon. Some pretty pale blue French flannel, with a delicate white stripe running through it, was purchased, and some pretty white merino for facing it. A kimono was fashioned, tried, proved a success and now there is the greatest sort of a run on tiny, short kimongs for the tyrants of the nursery,

ly left in juxtaposition with the dinner roast, which spoils the flavor of the latter. A dish of cold boiled onions is thoughtlessly set near the butter, which at once absorbs its distinctive odor without advantage to itself. Celery is laid near the cream pitcher and turnips or bolled cabbage set by the cooling custard for supper. Through such carelessness and ignorance the loss is sometimes quite great. Milk, cream and butter should be kept as much as possible from all food, as they too readily absord any flavor at hand.

Ment or poultry should not rest against each other, but be arranged so that the air can circulate about them. If meat and poultry are to hang, they should be suspended with the choicest part down that the juices may settle there.

A woman who would invent a prac-tical pocket for the sex at the present moment would win permanent gratitude. The inconvenience to which we are daily subjected can hardly be detailed. Handkerchiefs have to be carried up the siceves, just as men have hitherto disposed of them in their uniforms. Our grandmothers would have none of this. They carried their housewifely keys in pockets stowed away under their skirts. But we have borrowed from them the small reticules and larger bags attached to the side of the skirt. Neither of these plans is really convenient, the pocket beneath the skirt nor the detached bag, and the scoper we return to the old competition. the sooner we return to the old comfortable dress pocket the better-that is, a pocket placed where we can get at it without unseemly struggles.

Handkerchiete. Just at present it is the fad to have the finest and most expensive handkerchiefs that can be bought-exceedingly simple so far as they are finished with a hem and hemstitching, of course, but the expense lies in the very fine tex-ture of the material and in the wonder-

fully fine stitches that are employed in the lettering. One set of handkerchiefs the lettering. One set of handkerchiefs—the set only amounting to three—that were finished the other day, were embroidered in hair. Large letters are not fashionable—as small as possible when single letters are used—and even with the monogram nothing exaggerated is equaldered correct.—Baltimore News. Ted to example

HUMAN BRAIN CELLS

THEY REFUSE TO WORK UNDER TOO HIGH & PRESSURE.

Put on Too Much Steam and These Minute Organisms 60 on Strike, Why Men Go Crasy or Become Absentminded.

Keeping pace with scientific thought and progress certain problems which in the past have been shelved for want of light being thrown ppon them have been taken up again one by one to un-dergo further examination by the aid of improved science.

The newest revelation in this direc-

tion tends to the science of the mind and includes the following problems: Why does a man act queerly when he is intoxicated?

Why is a man absentminded on occasions?

Why does a man sometimes become violently insone, often a dangerous, raving lunatic?

Such questions as these have puzzled our immediate fathers, who have hardly ever satisfactorily explained them away or indeed thrown much reliable light upon them. The human brain is composed of cells, and each cell is a simple bit of nerre substance, from one end of which, like an octopus, spring a number of tentacles, while from another part arises an arm different from them and of great length. The long arm is intended for transmitting impressions from one portion of the brain system to another, it being made to touch the tentacles or short arms of the next one to it, the latter in its turn effecting contact with a third cell, and so on.

Thus a message is conveyed and the mind gets its news. The entire brain is made up of these cells, whose num-ber is legion and whose full strength is grouped in systems, these systems in turn being arranged in communities, the communities in clusters and finally the clusters in constellations. by which divisions they are known to physiologists.

So long as the mind is in a healthy condition each little cell. or brain octopus, attends to its business faithfully and gives no trouble, but as man generally is an animal who usually refuses to live the life spanned out by nature and adopts instead the life laid down by the modern artificial process

you should go a little too far it rebels NOTICE FOR PUBLICATION. NOTICE FOR PUBLICATION. If paby could only talk, he surely would thank the originator of the list long arm and getting itself out of circuit. But the companion could be companion to the list long arm and getting itself out of circuit.

> tiny cell has stored within its minute space only a certain amount of energy, but if you put on the high pressure this is easily consumed by the operation of the brain, and the organism breaks down from exhaustion. Now, take the first of the problems just the land sought is more valuable for its timber stated. When a person takes too much of August 4, 1892, Ellard E. Neison, of Florence, County of Lane, State of Oregon has this day filed in this office his sworn statement No 1156, for the purchase of the NW4 SE 14 No. 1155, for the purchase of the NW4 SE 14 No. 15 and 4 of Section No. 19 in Township No. 18 S. Range No. 2 West, and will offer proof to show that stated. When a person takes too much of or stone than for agricultural purposes, and to establish his claim to said land stated. When a person takes too much to drink, the cells in those patches of the brain that are responsible for the conduct of muscular movement be-

like one dead. Finally, if more than enough of alcoholic drink be taken, the effect on the cells is to paralyze them, and the unfortunate man dies.

There is some relation between extraordinary activity of the mind and insanity. Geniuses are apt to exhibit symptoms of mental altenation, and, singular to relate, their children are usually inferior to those of average

For instance, not to go out of England for example, Cromwell was a hypochondrale and had visions, Dean Swift inherited insanity and was himself not a little mad, Shelley was callself, sec, 30, and NW1/4 SW1/4, Sec, 29, T. 19 S.,

Nevada and Washington Territory," as extended to all the Bubble B self not a little mad. Shelley was callself not a little mad. Shelley was extendday filed in this office his sworn statement

county of Lane, State of Oregon has this ing insanity (modern ideas of hades are largely formed on the description evolved by his diseased imagination). and Byron said he was visited by ghosts.

This mental allepation occurring in the foregoing cases shows that certain specific groups of brain cells have come upder the baneful influence of the guiding spirit called talent or to make flual proof in support of his claim, and that said proof will be made before G H Holden Point Terrace, Oregon. H. H. Fisk, of insanity as depicted or, to phrase it more softly, induced disturbance of his continuous of said her the mental equilibrium.

The remaining problem is absentmindedness. This is produced by a temporary disjunction of certain groups of cells. A man becomes so absorbed in his study of some partieular subject and leads his whole aind to thought that the hard thinking disorganizes the groups of cells employed in the process of reflection. their tentacles being turned all one way, to the detriment of mental action generally, and so the man with the tentacles of his brain cells turned in the one direction passes along the structs lost to all observation or mental inception and does all manner of queer things because he is not conscious of Dated at Florence, Oregon, August, 2nd, 1900, that the undersigned has been appointed Administrator of the Estate of Anna Mathilde Fanke by the Deganty Court on Degember 7, 1900, viz.
