Gallier and son have the newest and nobbiest thing in the way of a shoeing rasp we have seen. It is a square drum of saw-blade steel somewhat larger than the ordinary rasp, and is perforated at an angle after the fashion of a grater. Its tendency is to cut forward, instead of dragging, and is readily sharpened with a file resembling a scratchawl, which is inserted in perforated surface. It is a New York man's invention, and will do the work, it is claimed, of twenty-five ordinary rasps.

McDonald, but found that the mine had been so handled that it could not be worked without loss and shut it down for the present. On Monday he sold most of the fixtures about the mine. His hasty departure from here was occasioned by a telegram that he received from Mr. McDonald to the effect that the Coos Bay was on her way up for a load of coal which was still in the bunkers. Mr. Elliott is a bright young man, highly educated and has held many important places of trust, among which was assayer of a mint.
