## DESCRIPTION OF THE BLUEBERRY

The Blueberry is a valuable fruit and is reliable to grow in our Northern states, where the more tender varieties of fruits winter-kill. It is perfectly hardy, having stood 40 degrees below zero without showing any injury to the most tender buds. It ripens in the 25th degree about the 1st of July, and is borne in clusters like currants; shape, round; color, reddish purple at first, but becomes a bluish black when fully ripened. The flavor is equal to the raspberry, a very mild, ripe sub-acid, pronounced by most people delicious. It may be served with sugar and cream, or cooked sauce, and is splendid canned for winter use. The plant sets to flourish in all soils and is a prolific bearer. It grows very stocky and makes a nice hedge. The shining dark green leaves and the blue fruit making a pleasing contrast. The demand for the fruit is great, and usually brings 15 cents per quart. They commence bearing the first year after setting out, and yield a full crop the second and third year after setting out. They are propagated from suckers and root cuttings. The plant is about the height and size of a currant bush and very stocky, holding the fruit well up from the ground. Plants should be set in the spring, during March, April and May, in rows two or three feet apart, and five or six feet between the rows, making a perfect hedge, and no grass or weeds should be allowed to grow between rows.

### PRICE LIST.

1 dozen plants by mail	\$ 60
2 dozen plants by mail	1 00
100 dozen plants by express	50 00
