"Another wonderful discovery has

Tom Douglas was young, good looking, and would some day be well to do; but above all things he he began to learn chemistry in the fourth form at Halstones school. Tom and all his class-fellows were deeply taken by the weird and unearthly odors, the terrifying explosions, and the miraculous subaqueous fire which appeared at the will of Mr. Stubbs, the science master. Indeed they endeavored persistently to emulate their tutor's exploits; but even the tutor's performances were presently eclipsed by those of his promising pupil Tom. The boy had a perfect genius for explosions, so that it soon became customary among the others during the two or three hours they spent each week in the laboratory, to give up any little enterprise of their own and simply keep an eye on Tom's movemedts. It was usually worth their while, for he rarely failed to do something mar-

When the end of the term came and the youth arrived at his home at Dulberry, he set off at once on a tour ef inspection about the home premises. A small building which belonged to the gardener, and was used by him as storehouse for seeds, flower-pots and other things appertaining to his craft, struck his fancy. He found no difficulty to persuade his too complaisant parents to make this room over to him; and notwithstanding the murmurs of Sandy, the gardener, it was emptied of its horticultural contents, fitted with benches, shelves and a fireplace, and generally habitable.

Chemicals also, and alt kinds of apparatus were ordered from London. Had his friends not been altogether ignorant of chemicals they would have noticed that the chemicals that Tom ordered, and for which they blindly paid, were chiefly of the kind that go to make up explosions. Almost as soon as the laboratory had been fitted up the goods arrived from London. On the first day nothing of note was seen or heard, Tom being too busily engaged in arranging and admiring his treasures to begin experimenting with them. Soon, however, the household began to listen with mild toleration to the loud explosions which at intervals of about an hour were constantly heard from the direction of Tom's laboratory. They were not quite so tractable, however, when the embryo chemist grew tired for the moment of noises and turned his attention to the production of untempt to approach the source of odors, by which they were already almost stifled; whereas Tom reveled in the malodorous products of his experiments, and behaved, in in an atmosphere reeking with the most abominable gasses, as if he were once more breathing his native air after a long and painful period of exile. His love of science grew stronger,

if a good deal more rational, as years passed by. At last, when he went up to Oxford, another room was added to his den. This was furnished after the manner of the average undergraduate's room. and here he kept his personal property and did most of his reading. Like most science men, he was fond of novels, and of these this room soon contained an extensive and catholic collection. But the course of true love never did run smooth, and at last Tom Douglas discovered that there was one thing which, struggle as he might to ignore it, was beginning to interest him far more than any of the sciences to which he had hitherto devoted himself. His father's brother had many years ago emigrated to Australia. Almost immediately he had married, but after a few years of hard struggle against poverty, his wife had died, leaving to him a little daughter, Dora. Tom Douglas was in his fourth year when he heard from home that his unknown uncle was dead, his father had recieved a letter some months before saying that Dora would soon be alone in the world.

She would be quite rich—for

success had come to her father when it was too late to save his wife-and now the dying man begged his brother to become her guardian and offer her a home. Mr. Douglas had at once consented; and Dora had arrived in England shortly before the commencement of Tom's last long vacation; so that when he arrived at Dilberry she had already been there for a week or two. The cousins became very good friends, and it was the image of a sweet, girlish face, blue eyed, and a little sad, which oc-

most entirely. At the end of the "long" he to love me just a little?" went up to Oxford once more in order to take leave of his friends and formally to take his degree, for at the end of the previous term he spoke in another voice: "Why at the end of the previous term he had gained a "first" honors in chemistry. This brief absence from Dora was so utterly painful to him that he became aware of the fact that he was really very much in love with her. Of course he again. "Tom!" said the voice. ought to have known it before; and turning, he saw his cousin they are justly entitled to the disperhaps he had done so, but at standing with half-parted lips and tinction (which is claimed for them); least he had never acknowledged laughing, rosy face only a yard or of having originated the spotted it to himself. At any rate, he made haste to get back to his

When he returned to Dulberry he carried with anxious solicitude. a box, which appeared to contain he raised and kissed it, she whissomething at once very fragile and pered: "Yes, Tom, long ago." inestimably valuable. Dora had taken a great interest in his seientific studies-or rather, he had revived for her benefit his boyish opened a new line of portiers, table funterest in explosions. After lunch lovers, towel rings, stair mails therefore he told her that during and novelties in furniture and his absence he had spent a tew house-finishings. Call and see days in town and there had secured their elegant new store in the identity beca surprised at a game of Masonic building.

examine. He took the box under A Scientific Courtship. examine. He took the box under his arm and away they went togarden. Arrived there he opened the box and took out a piece of mechanism, which he said was a the hands of the military, and in sand years age. The strangest was scientific. His passion for with the air vibrations on a thin the First Cavalry, who succeeded already marked out on the wax.

Finally, turning the screw again, he set the cylinder in motion, and pers, who would do much to de- man, druggist. the stylus, traveling along the line plete the national reserve of its it had traced thereon, vibrated as noble game unless prevented. in the first instance. By this There was never anything like a reighbors talking about it, You may in vibration, and, as it communicated its vibrations to the air, the cated its vibration is a cated its vibration. original sounds were once more re- wonders preserved should rejoice ever tried it, you are one of its staunch

trions made by the Interior Departrefunded. Trial bottles free at Fosbey days passed not happily for Tom ment have been efficiently en-bouglas. He was in love, deeply forced, and ir a manner acceptable in love with Dora, but he did not to the public dare to tell her as yet the secret her keen sight by his every word and action. He spent a good deal of time alone in his study, and of time alone in his study, and amused himself after a rather silly fashion with the phonograph.

As she went she was thinking of him, and wendering why he hesitated to ask her the simple question which she would so gladly answer-the question which he was constantly asking himself, and to which his love and humility both gave different answers. She had chosen a book when her eye fell beautiful deer appeared by the months she coughed incessantly and on the phonograph lying ready for use. Now that she was alone, she thought it would be rather pleasant to try how her own voice

She had read lately in one of the papers that people had no idea of what their own voices sounded like; and she rather wondered are known to exist in the eastern Mason's Drug Store. whether her singing, of which she was inclined to think highly, was really so good as she imagined. Filled with dread least the unflattering phonograph should prove to her that her voice was harsh and unpleasant, and not quite depleasant odors. But even then the boy was quite safe from interruption. They were not likely to attempt to approach the source of What sound was that which fell the partment of Agriculture, was especially a partment of Agriculture, was especially a partment of Agriculture, was especially and neek for weeks. Finally 1 procured tablished at a little German village a bottle of one of the leading Sanaparton. They were not likely to attempt to approach the source of the color of the col What sound was that which fell there were live, and in 1861 interest, and interest ter a moment of blank astonishment, she listened with a quiet smile, as though Tom was stauding before her in the flesh and saying what the phonograph said for Ct., in 1875. There were four in took a bottle with the same benefit. "Dora, darling, I have loved you every since the day I first saw you! I have longed to tell you every day the latter year congress made the enterprise national by an appropri-

> nalike the cheerful tones to which are employed. she had been accustomed; but the

At that moment she heard her ousin's voice at the other .end of home unexpectedly, and was chatt ing with the gardener, he would be here presently, no doubt.

In a moment she had once more phonograph, and bending over it spoke a few words in a low, clear screws is driven by an electric mostepped quickly into the next wheel more than five miles away room—the laboratory.

In a few minutes she heard the conversation between Tom and the gardener cease. The young man chair and then the phonograph half a mile, and 250 horse power a struck his attention. He moved quarter of a mile. In the United toward it, and stood looking down States no electric motor of more door of the room whence Dora was eagerly watching him. Then he began absent mindedly to put the favorite size belng 10 horse power is known to Mr. Pope, but there are as many as 6,000 small motors in use, a favorite size belng 10 horse power. began absent mindedly to put the favorite size belng 10 horse power. treadle in motion. Once more the It is predicted that in cities electric Dora moved silently forward and stood in the open door-way o. the laboratory.
