A new and valuable application in the cultivation of flowers has been advanced. It is to the end that the perfume of the flower be used as a healing agent. M. Ungerer expresses the opinion that flowers and the perfume distilled from them have a salutary influence on the constitution, and, indeed, may be regarded as a therapeutic agency of high value. He says that residence in a perfumed atmosphere forms a protection from pulmonary affections and arrests the development of phthisis; thus, in the town of La Grasse, where the making of perfumes is so largely carried on, phthisis is rare, owing to the odorous vapors exhaled from the numerous distilleries. If such a fact can be established, the cultivation of flowers and the distillations of perfumes should be universally adopted.
