There will be a baby day at the Portland Industrial Exposition, on October 12, and every fond mother for miles around will enjoy her baby to the grand exhibition building, baby and all, with the proud consciousness that with her nursing no other can compare. What an array of cherubic darlings will be presented to the bewildered judges, who, as sometimes happens, may be bachelors and know nothing about the little "God's blessings." Wee beside them if their decision award not the prize to the sweetest pretties and best. Better for their peace of mind that they were up-pires in a base ball game.

A gentleman named Bushe has been awarded the contract for surveying townships 10 south, range 5 and 6 east, where there are a large number of squatter claims. THE SANTIAM MINES.

Practical Evidence of the Value of Profitable Mining Operations.

As evidence of the value of mining operations tributary to a city, it can be stated that the Albany Mining & Milling Co., is already adding more to the trade of this city than is generally supposed. This company has expended in Albany for supplies alone during the past week over \$1000. Their expenses for the past 30 days for labor and other expenditures, not including the cost of their new machinery, has been \$3000 per month. This has been nearly all paid in this city and to men who trade here. From this some idea of the value that these mining operations will be when fully under way, may be reached. The company is carrying on the work on a business basis. They know the value of the ore, and are now putting in machinery to work it. Before the year is ended it is believed that the work will develop the fact that a profitable mining industry tributary to Albany is an established fact, and the gold and silver bars from these mines will be produced in quantities sufficient to insure profitable returns for the capital invested.

This company now employs about 50 men, and there is already becoming one of the valuable industries of the country.

A Volt Defined. Aluminum Age: A definition of a volt, which, although somewhat unscientific, may prove suggestive to readers, is given in the Chicago Evening Post in the following terms: "The volt gives one blow of a specified force. As volts are added together the force of the blow is increased until the endurance limit is reached. It takes about twenty-five volts to make a perceptible tingling sensation. When fifty volts pass through the body the tingling sensation becomes unmistakable, but not strong, while 100 volts feels lively, 200 volts strong, 300 volts powerful, 400 volts tectonic, and 500 volts will knock a man flat."

The Warm Spring Indians who come to the valley every year to pick hops, are growing more independent with the flight of time. Before they would agree to pick hops for Scott Wallace, they raised the price to 75 cents a box, and also stipulated for free pasturage for their ponies—and to make their demands as unreasonable as possible, they asked for a quantity of that interdicted beverage—whiskey.

A di-patch from Brownsville says that Hugh Fields and J. H. Washburn are figuring upon an enterprise by which that town will become a noted health resort. The aim of these men is to lay a pipe from Upper Soda to Brownsville, a distance of thirty-five miles, and bring the soda water down into civilization. They calculate that the laying of the pipe and the building of a hotel and ample accommodations will cost \$200,000.

Testing the Baking Powders. Comparative Worth Illustrated. BY PROF. PETER COLLIER, LATE CHEMIST IN CHIEF OF THE DEPARTMENT OF AGRICULTURE, WASHINGTON, D. C.

Table listing various baking powder brands and their comparative worth. Brands include DR. PRICE'S Pure Cream Tartar, ROYAL, UNRIVALED, Taylor's 1 Spoonful, MONARCH, SNOW BALL, CALUMET, HOTEL, YARNALL'S, MILK, SHEPARD'S, MON BON, FOREST CITY, CHICAGO YEAST, CROWN, SILVER STAR, DODSON & HILS.

Above diagram was drawn and verified in all its details, by Prof. Peter Collier, who is pre-eminent as a Chemist, and Scientist. The illustration is made in accordance with his chemical tests of each brand enumerated. The Carbonic acid gas was calculated to get the leavening strength and the quantitative analysis to ascertain the comparative wholesomeness, purity, and general usefulness of the leading Powders. The result of Prof. Collier's examination and test, reveals the fact, that, with but one exception, every brand tested contained either Ammonia or Alum, and a number both.

NOTE.—Dr. Price's Cream Baking Powder, as shown by Prof. Collier's examinations, is the only pure Cream Tartar Powder found from adulteration and the highest in strength. All authorities report Dr. Price's free from Ammonia, Alum, Lime, or any other adulterant. The purity of this ideal Powder has never been questioned.

While the diagram shows some of these Ammonia or Alum Powders to be of higher strength than others classed below them, it must not be taken that they possess any value. All Ammonia or Alum powders should be avoided as dangerous, no matter how high their strength.
