

IMPROVED TOURIST SLEEPERS.

Railroads Are Acceding to Demands of Middle Classes Who Want Better

Sleeping-Car Service. In response to the demand of the times the O. R. & N. and its connec tions are placing in operation a much better grade of tourist sleepers for Patific coast service than at any previous time. The largely increased traffic to this section of the country has demanded all the improvements of latterday transportation, and in consideration of tihs the railroads are establishing a service which is excellent in every particular. Not only are the wishes of the first-class passengers served, but those who are traveling to and from the East on second-class tickets are splendidly cared for. There are man that he was, built his road on and was a time when a tourist sleeper appealed to a limited number of people to walk alongside the roadbed was takwho were traveling on the "cheap" order, in every meaning of the term. this season a number of special officers Now, however, there has been a radical headed off all would-be promensaders change. With the better tourist sleepers in operation the class of passengers has been improved, and one may now on the other swamps and marshes. To travel upon them and enjoy all the privileges of a first-class sleeper at a Daily, on the O. R. & N. Eastbound

fast mail, is attached one of these latest improved tourist sleepers, a model of beauty and handsome appointments. The new cars are almost an exact counterpart of the first-class sleepers.

One noticeable feature of the new tourist cars is the absence of a smok- 5 cents, and no half fares for children ing apartment. The new cars being built by the Pullman Company are not porvided with smoking apartments. This new departure has been taken because of the fact that most through trains are provided with composite cars, which provide a smoker for the sleeping-car passengers.

The demand for men to work in the lumber woods during the season that is just opening is better than it has been for some years, and the wages offered are 25 per cent higher. The tide of workers from the harvest field to the pineries has set in, and yet the demand is greater than the supply.

PISO'S CURE FOR N ONSUMPTION

MARINE RAILWAY NEAR NEW YORK IS UNIQUE.

It Is Only One-half Mile in Length but It Has a Monopoly of a Good Business and Earns a Great Deal of

The leath of Mr. Vanderbilt brought back to my memory recollections of cently called to the least known enterprise which the late Mr. Corbin founded, and which, according to one source, is the richest railroad in the world The road is within half an hour's ride from New York and is known as the Marine Railroad. The entire distance covered mile, and the fare is the uniform and cars, make up the entire rolling stock shouted: though, between the two beaches, which are connected by a narrow strip of land. This strip Mr. Corbin, wise issued orders that any one who wanted ing chances of arrest for trespass, and who wanted to save the fare of 5 cents. On one side of this strip is the ocean a walk of at least three miles, hence the profit accruing from the Marine Rathroad. The road operates only three months a year, but during these three months it carries on an average 50,000 or 60,000 passengers a week. Last Fourth of July the two engines and two coaches carried 28,000 persons at either. The staff is in keeping with the extent of rolling stock. It consists of two engineers, two firemen, two conductors, two ticket sellers and two gatemen. The superintendent of Manhattan Beach is at the same time general manager of the Marine Railroad, its general passenger agent and freight agent operating expenses for the three months of the season do not exceed \$3,000. In 1891 the road is said to have

stockholders are numerically almost as small as the staff of the road can be eastly imagined, and that none of the stock is for sale is also self-understood. In one respect the miniature railway resembles the miniature states of An-

cleared \$57,000 above all expenses. Its

capital is \$20,000, and, according to one

of its stockholders, it has cleared up-

wards of \$1,000,000 for the sharehold-

ers during its existence, a dividend of

250 per cent. per annum. The hundred-

dollar shares are therefore worth in the

neighborhood of \$5,000, a higher prem-

ium than that commanded by Chemi-

can Bank stock, which is usually con-

sidered to be the most remarkable in-

vestment in that respect. That the

CLIMATE SHOWS FEW CHANGES. Weather Conditions Now About th Fame as in Ages Past. This subject is of extreme interest and merits a most thorough study. We and under normal conditions is probafind the "early" and the "latter" rain bly not more than five hundred miles to-day in Palestine precisely as described 3,500 years ago. "Jordan over-

flows all its banks" in February to-day exactly as it did in Joshua's time, thirty-three centuries ago. Plants of the same size and have the same ap-For lung and chest diseases, Piso's Cure is the best medicine we have used.—Mrs.

J. L. Northcott, Windsor, Ont., Canada.

of the same size and have the same appearance as those growing to-day. Records of vintages in France over 700 years ordsof vintages in France over 700 years show practically the same dates as to-The supreme court of Nevada has day. Actual observations of rainfall for over 200 years in France show no change. Observations of temperature show no change appreciable to us, though, of course, the earliest observamight be adduced to fill a small volume. On the other hand, we have records of most extraordinary cold weather in ancient times. One winter the light wine in France froze. Another winter the River Po froze over so as to bear teams, an unheard-of phenomenon to-day. In this journal recently it is stated that "Parnassus and Socrate, now free from snow, were covered with it in classic antiquity. Also "the name of Greenland, which strikes us as so singularly inappropri-

> ate, was not inapplicable at the time it was named, in the fourteenth century." It is entirely probable that descriptions of the cold in ancient times were nuch exaggerated. Parnassus and Socrate have snow at times, and, in earlier days, when protection against the cold and snow was much less than now, a little snow would go a long way. The earlier voyagers from Iceland. more than 1,000 years ago, leaving a land of almost perpetual ice and snow, and reaching a land in the summer with its beautiful green color to their unaccustomed eyes, would very nat-

urally give the name of Greenland to it. At the summer time, it is said that ble cold and deep snows of their boyhood days as incomparably greater than anything which does or can occur to-day, have completely lost their reckoning the last winter when reading of a ship that had sunk in New York harbor by weight of the ice upon it; also, that Washington had had thirty-four inches of snow on a level and the low est temperature ever noted in that fair city. I am sure a careful study will show no appreciable change in the climate of this earth since the early historic times. Of course, nothing here adduced touches climatic changes in glacial times or in prehistoric times, which changes have been established

beyond question.-Popular Science. Curious Ways of Marking Time, The islanders of the South Pacific have no clocks, but make a curlous time-marker of their own. They take the kernels from the nuts of the candle tree and wash and string them on the rib of a palm leaf. The first or top kernel is then lighted. All the kernels are of the same size and substance, and each will burn a certain number of minutes and then set fire to the next one below. The natives tie pieces of bark cloth at regular intervals along the string, to mark the divisions of time. Among the natives of Singan. in the Malay Archipelago another peculiar device is used. Two bottles are placed neck and neck, and sand is put

THIS ROAD IS A MINT the other one every half-hour, when the oottlesare reversed. There is a line nea on which are hung twelve rods, marked with notches from one to twelve. A regular appointed keeper attends to the bottles and rods, and sounds the hour upon a gong.

Characteristic of Funston The Ohio State Journal, after Inter viewing a member of the engineer corps, concludes that Gen. Fred Fun ston, the Kansas boy, can be original even while in a semi-comatose state It was before the battle of Caloocan Austin Corbin. My attention was re- He had had no sleep for two days and was in bad shape. He therefore rolled himself up in some leaves and went to sleep. . Leantime, the division received orders to advance, but Funston could not be found. Many scouts had been killed, and it was feared that the Colonel's curiosity-for he was a Colone by this road is barely a quarter of a then-had led him into trouble. Pres ently, however, a glimpse was caught small rate of 5 cents. The road serves of his red hair in the tangle, and later connect the two summer resorts they found him shrouded in leaves. As Manhattan Beach and Brighton Beach. this is the way bodies are prepared for The trip over the road occupies only a burial in that part of the world, they minute with the comparatively slow got more and more apprehensive with ocomotive, two of which, with two each step, until, at length, some one "Colonel, are you dead or of this wealthy road. The road has alive?" "Neither," grunted the Colo been an absolute monopoly of traffic, nel, as he rolled over for another nap; "I'm sleeping."

It is an unexplained fact that glowworms are much more brilliant just before an approaching storm than at any other time.

The most active volcano in the world is Mt. Sangay, 17,190 feet, situated on the eastern chain of the Andes, South America. It has been in constant eruption since 1728.

The atmospheric ocean surrounding the earth is frequently disturbed by gigantic waves, which are invisible except when they carry parts of the air, charged with moisture, up into a colder atmospheric stratum where sudder condensation occurs. In this manner long, parallel lines of clouds sometime make their appearance at a great height, marking the crests of a ripple all in one person. It is said that the of air waves, running miles above our

Prof. Alexander Agassiz, with a corps of men of science, and under the auspices of the United States Fish Commission, set sail from San Francisco about the middle of August, in the steamship Albatross, on one of the most important scientific expeditions of recent times. An immense area of the Pacific Ocean, including the Paumota, the Friendly, the Ellice, the Gilbert and the Marshall Islands, and many unnamed groups of coral islets, will be thoroughly explored for the first time. The voyage will cover about 20,000 miles, and the explorations will include the life and phenomena of the sea from its surface to its greatest attainable

It has often been suggested that the brilliance of the sun's disk is due to indorra and San Marino. One never hears | candescent particles of carbon, and anything about either.-Philadelphia of carbon in the sun has been demon strated by the spectroscope. Lately Prof. Hale, the director of the Yerker Observatory, has shown that there is a thin layer of carbon in the lower part of the sun's atmosphere. It surrounds the solar globe like a luminous shell, above the sun's surface. But when an eruption takes place from beneath the carbon layer, like all the other constituents of the solar atmosphere, is broken up and locally dispersed by the tremendous agitation.

The work of keeping the mouth of the world's greatest commercial river. the Thames, open and free for ships of all classes is not lacking in difficulty. The shifting sands continually encroach upon the channels of the great estuary, and the latest surveys show tnat the Duke of Edinburgh Channel. which is at present the principal passage into the Thames for heavy vessels, has narrowed since 1882 from a mile and a half to about half a mile. "Its total obliteration, which seems by no means impossible," says Nature, "would entail a long circuit at the time of low water." 'The "Middle Swim." the main route for traffic between London and the north, has also contracted and shoaled much within late years. Occasionally small diamonds have been found among the ridges of gravel brought down from the north in the age of the glaclers and scattered over the States bordering on the Great Lakes. Prof. Hobbs, of the University of Wisconsin, thinks that these diamonds came from some place in Canada, and that by tracing back the line of advance of the glaciers the original location of the gems may be discovered. An effort to carry out Prof. Hobbs' suggestion is to be made, and Prof. H. L. Fairchild, of the University of Rochester; Prof. I. C. Russell, of the University of Michigan; Prof. J. P. Iddings, of the University of Chicago, and Prof. O. C. Farrington, of the Field Columbian Museum, will co-operate by examining, without charge, suspected gems found by persons living near the glacial moraines.

Analysis of Instinct.

An English traveler in Northern Rus-Greenland presents a most beautiful sia, telling how he made his way green near the Danish settlements to through a forest after a fall of snow this day. Our oldest inhabitants, who simply by keeping that side of the tree have been wont to describe the terri- to which the snow clung always in the same relation to his course, is led to examine how it is that a savage gains the instincts of his race.

We often hear of "the instinct of direction," as we may call it, possessed so marvelously by savage races. People profess to expla'n it in one of two ways. It is either said that the Indian actually does take note of the sun, the wind, the lay of the land, of the course of the streams-which, as a fact, it is often, in the dense forest, impossible for him to do-or else it is set down simply as "instinct," and this, although it is nearer the mark, is, in a sense, to beg the question.

Instinct, however it may be in the case of animals, is here, no doubt, hereditary experience. The sun, the wind, the streams are influences, but only that. The Indian does not consciously observe them. Just as you, using an experience gained in daylight, can follow without hands in the dark a winding staircase between the baluster and the wall, so with the Indian in his

forest. His "observation" is entirely subjective, an unconscious impression, the sum of small influences, to which, by heredity, his senses are alive, as the retina to light pictures. In the same way I had not consciously remarked the lay of the snow on the trees, yet the fact kept me

from going astray. A girl always thinks her first beau is in one of them which pours itself into perfection personified

FIRST PATENT IN AMERICA

Was Granted in 1648 by the General Court of Massachusetts.

To the general court of Massachusetts belongs the honor of granting the first American patent; this was in 1648 and was then designated as a monopoly. It was confined to the region controlled by Massachusetts and the one issue apparently included all the invention of the inventor connected with engines that depended upon water for their motive power. The limit of the monopoly was fourteen years and the court not only retained power to forbid exporta-

tion, but to prevent exorbitant charges

upon the public for their use. The patent was issued in this form: "Jenkes Monopolye.-At a generall Courte at Boston the 6th of the 3th Mo 1648. The cor't consid'inge ye necessity of raising such manifactures of engins of mils to go by water for speedy dispatch of much worke with few hands, and being sufficiently informed of ye ability of ye petition to p forme such workes grant his petition (yet no Othr p sen shall set up or use any such new invention, or trade for fourteen yeares without ye licence of him the said Joseph Jenkes) so farr as concernes any such new invention. & so it shall be always in ye powr of this co'te to restrain ve exportation of such manufacturers & ye prizes of them to moderation if occasion so require."

This inventor, Joseph Jenkes, or Jenks, as it would now be spelled, came from Hammersmith, England, settled down in Lyan in 1643 and died In 1682-83, aged 81. He was a blacksmith and machinist, made the dies for the coining for the "pine-tree" money and built the first engine in this country; altogether a man of great inventive genius and the ancestor of a large number of descendants. One of his sons removed to Rhode Island, where he built several mills.

FATAL AGE OF THIRTY-SEVEN

Many of the World's Great Men Have 'uccumbed When Only That Age. The age of 37 is a particularly fatal age. An examination of the records of the United States government shows that more people dle at that age than any other after attaining their majority. . It is also ascertained that more misfortunes overtake persons at that age than at any other time in their lives and that few fortunate events befall

An examination of history develops the same thing. At the age of 37 a great sorrow befell Aristotle, the death of Plato, his friend and teacher, with whom he had studied for nearly twenty years. This sorrow plainly showed its effects upon his future life and to it may be attributed the sad tone of his later writings. It was at the age of 37 that Lord

Byron dled of fever at Greece. As

Lord Beaconsfield says he was "greater

as a man than as a writer and his loss to the world was a great blow to it." Raphael, the glory of Italian art, died at 37. He fell sick a week before his birthday of cold and fever and died on that day, Good Friday. In him the world lost one of its greatest artists. In music, like art and poetry, England lost her greatest composer at the age of 37. Purcell, the most distinguished musician Britain produced. died within a few days after attaining

in metaphysics, and Sir Isaac Newton in philosophy and mathematics. It was at the age of 37, too, that England lost a military genius that she regarded as of the highest rank and promise. Prince Henry of Battenburg died of fever in Ashantee in that year

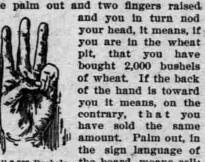

him on a par with Milton in epic poetry,

of his life. Pascall, too, died at 37, but why seek more illustrations? These are sufficient to Illustrate the fatality of the age among geniuses. Where death failed misfortune often befell.

So the age of 37 may be regarded as the fatal age of all those after a man passes his majority.

QUEER SIGN LANGUAGE

Used in Transactions on the Chicago Board of Trade. a man on the Chicago Board of Trade holds up his hand to you with the palm out and two fingers raised and you in turn nod

you are in the wheat plt, that you have bought 2,000 bushels of wheat. If the back of the hand is toward you it means, on the contrary, that you have sold the same amount. Palm out, in the sign language of Sell 2.000 Bushels, the board, means sell: palm in means buy. The number of fingers raised shows the number of

buy or sell. There are also a number of modifications which show to the eye of the expert the price at which the wheat is offered or the amount bid for it. These symbols are somewhat complicated, however, and it requires a careful train-
