To Cure Stammerers.

It is said that stammerers rarely, if ever, show any impediment of speech when speaking in whispers. On this fact a new method of treatment has been advocated, which is as follows: For the first ten days speaking is prohibited. This will allow rest to the voice and constitutes the preliminary stage of treatment. During the next ten days speaking is permissible in the whispering voice, and, in the course of the next fifteen days, the ordinary conversational tone may be gradually employed.
