**BLACK WELSH CATTLE.**

A Breed That Should Be Better Known in This Country.

The principality of Wales has two indigenous breeds of black cattle, of which at least one fills an important place in Great Britain, though it is unknown on this side of the Atlantic. The black cattle of Wales were originally all of one breed, and in fact are supposed to descend from the species Bos primigenius, which is now represented by the wild white cattle of Chillingham, England, and the so-called Podolian race of the continent. One singular fact that justifies this opinion is that among the black Welsh cattle is seen an occasional white calf, black on the muzzle and inside of the ears, like the cattle of Chillingham.

The original black cattle of Wales were coarse and slow of maturity, but they possessed such hardiness, dairy qualities and special adaptation to their environments that no effort at improvement was made until within a few recent years. The first herd book was published in 1874, embracing both the so-called Castle Martin cattle of South Wales and the Anglesea of North Wales. The former are coarse boned, with flat sides and deficient beef qualities, but good milkers. The Anglesea cattle, or "runts," as they are called, have been so greatly improved that they are now recognized as a distinct breed with a separate herd book of which the first volume was published in 1883. The improvement in these cattle is the result of careful selection and breeding, to which they have responded rapidly. The large bone, slow growth and light quarters have been bred out, and a fine, blocky animal is the result, like that shown in the illustration above, which is a lifelike reproduction of a Welsh steer that won the prize breed cup in the Smithfield club cattle show, London. His weight was 2,464 pounds. Fat cows of the same breed have attained weights of 1,800 to 2,400 pounds. The cows are deep and long continuing milkers, producing an average yield of from 12 to 14 pounds daily at the flush. The milk is fairly rich in butter fats. With their extreme hardiness, early maturity, good beef and dairy qualities, the North Welsh cattle are rapidly growing in favor among British feeders and breeders and seem worthy of attention in this country.—Farm and Home.

**GOOD BUTTER SALT.**

Dairymen Should Exercise Great Care in Its Selection.

Hunter Nicholson says in the Jersey Bulletin that there is almost as much difference in the quality of salt as in the quality of butter. Good butter salt is fine-grained, bright-colored, clean, pure and free of foreign odors. It must be fine-grained in order to mix readily and dissolve regularly and quickly through the butter; bright-colored, showing that it is well crystallized; clean, that is, free from foreign substances; and free from bad smells, which salt is very ready to absorb. Salt, like everything else sold, is likely to be adulterated. Baryta is most commonly used. A simple and trustworthy test of salt may be made by dissolving a small quantity in clear, hot water. This will bring out any bad flavor and disclose the presence of any foreign substance. Pure salt will make a clear brine and deposit no sediment. If the brine smells, is cloudy or colored, or leaves a sediment, do not use the salt for butter. There are a number of excellent brands of salt, prepared expressly for the dairy. If you can find out where they are sold, get a lot; be careful, however, not to keep it near any ill-odored substance, as it absorbs odors very readily, and, once absorbed, the salt is ruined beyond remedy. Besides the American salts, there are one or more foreign brands of excellent reputation.

**The New Century Infant.**

Willie, aged five, appeared at the main entrance to the circus tent hand in hand with a venerable graybeard. "Grandpa wanted to see the animals," he explained to the doorkeeper, "and I had to come along to take care of him."—Chicago Tribune.

**Not Up to the Standard.**

Mamma—What's the matter, Willie? Didn't you have a good time at the party?

Willie—Now.

"Why? Didn't you get enough to eat?"

"Yes; but I didn't get too much."—Philadelphia Record.

**His Plan.**

"Ah," said the great foreign actor "I have hit on a plan which will, indeed, bring me distinction."

"What is it?" asked a friend.

"I shall make a farewell tour of the United States—and I shall not get back."—Brooklyn Life.

**Naturally Worried Her.**

After vainly trying to make his pipe draw he threw it on the floor and stamped on it.

"Why, John Henry, what are you doing?" she cried.

"That's all right," he growled; "that's just my nature. With anything that's mine I'm patient up to a certain point, and then if it doesn't suit me I just smash it. See? I smash it good and plenty, so as not to be annoyed any more."

"Dear me!" he returned, fearfully. "What a terrible thing it would be if I shouldn't suit you some time."—Chicago Post.

**LIVER TROUBLES**

"I had Theford's Black-Draught a good medicine for liver disease. It cured my son after he had spent \$200 with doctors. It is all the medicine I take."—MRS. CAROLINE MARTIN, Parkersburg, W. Va.

If your liver does not act regularly go to your druggist and secure a package of Theford's Black-Draught and take a dose tonight. This great family medicine frees the constipated bowels, stirs up the torpid liver and causes a healthy secretion of bile.

Theford's Black-Draught will cleanse the bowels of impurities and strengthen the kidneys. A torpid liver invites colds, biliousness, chills and fever and all manner of sickness and contagion. Weak kidneys result in Bright's disease which claims as many victims as consumption. A 25-cent package of Theford's Black-Draught should always be kept in the house.

"I used Theford's Black-Draught for liver and kidney complaints and found nothing to equal it."—WILLIAM COFFMAN, Marblehead, Ill.
