COLD STORAGE EGGS.

The cold storage egg is of course "hen fruit." Not many years ago it was proclaimed that a process had discovered whereby fresh eggs could be manufactured like wooden autmegs, but these egg machinists met the same fate as the patent rainmakers who went to the western rainless regions with their dynamite balloons to make thunderstorms to order. The ben lays the cold storage egg. however distant it seems to be removed from its primordial ancestor.

In the cheap season hucksters gather them from the farms; poultrymen haul them to the railroad stations; grocerymen, who trade them in, de-liver them f. o. b., and all together the erated eggs are freighted to wholesale houses and the "trust." Now, if these millions of eggs were all good or the men who handle them were all careful honest the cold storage eggs would be of better quality and the prejudice against them not so great. But listen!

Farmers, as a rule, are not very particular about eggs. Few of them have good henhouses and nesting places The result is the hens hatch and lay in any old place.

They lay in the haymow, next in heat to hades on a hot day; they drop their eggs under the roosts and in the cow stables; they steal their nests under the hogpens and in many other places where heat and filth soon rob them of their beauty and sweetness. Eggs found in stolen nests are often day, or it may serve in its honorable capacity for three months before it finds its way to an epicure's table in the city as "fresh stock laid while you How well we remember the day on the farm when we found a nest with ten dozens of eggs in the corner of the haymow!

If one hen laid them all they were the product of 180 hard days' work- two quarts of bolling water, two ounces that is, if she laid regularly every other of baking sods, cream of tartar, saitday, but the best type hen sweats to peter and a small amount of alum.

How we exulted one day when we spied a half bushel of eggs under the eld hognen!

We squeezed under and hauled them pigpen through all the ages of man.

You might think all the eggs shipped cool place. from a modern poultry plant were fresh. Let me lift the lid. There are gallon of liquid glass at drug store for the large incubators are running five eggs do not sink, add more water. days the eggs are tested by passing them before a strong light. All eggs that do not have a bloody-like spider in them are rejected. This spider is the live germ, and you can follow up its development till toward the twentyfirst day, when you can see the chicken wiggle in the shell.

On the fifteenth there is another test. The eggs rejected are the following: Clear or infertile, with a red streak or ruptured blood vessel, a black spot or dead germ, cracked and rotten. At the end of the hatch among those left are the eggs with dead chicks in them.

Now you can see how much latitude a blackleg in the egg business has for trickery.

The infertile eggs are clear, and one can hardly distinguish them from fresh eggs. Bakers often use them in their manufacture of wholesome cakes and pastry. But some poultrymen will mix these rejected eggs with good stock and sell them to wholesalers, and some wholesalers will ship them to retailers and storage companies, and then they go to the hotels, boarding houses, res faurants and private families, and that's where the "kick" comes in.

CANDLING EGGS .- But let us actually follow these eggs into a wholesale house where they do an honest business. They are preparing eggs for storage. Three or four carloads are stacked around, and some have been shipped clear from California. We open a crate of California goods, and they are certainly crackerjacks-large, white, beautiful eggs, superior in size to the eastern White Leghorn and good potpie. Sell them to the butcher Minorca. What fine stock they must and buy a tonic if you have that tired have in the state of orange groves and giant redwoods!

turns on a light which is in a box. A hole about two-thirds the size of an egg goes clear through the box, and the strong light shines through these | the nests if you are the man who venholes. At each opening an employee tilates his chicken house with broken is passing eggs before the light. Before he passes the egg it is tapped to see if the shell is perfect. All eggs that are not clear, that are cracked or have dirty shells are thrown out.

The soiled and cracked eggs are sold to the bakers, canned, frozen or made into egg powder. The bad eggs are a blamed good whack." sold for the manufacture of mucilage, shoeblacking, disinfectants, dyes, etc.

Most of the cracked and soiled eggs are made into desiccated eggs. The

moisture is evaporated, and the mainder, mixed with salt and sugar for preservation, is put up in tin boxes, like cocoa, to be used by bakers, camping parties and families. Pearg used these dried eggs on his last expedition to the north. After the eggs are tested, sorted and packed in clean cardboard they are sent to storage. The firm may sell them to the storage company or pay so much a crate to have them stored for winter trade.

IN A COLD STORAGE PLANT .-The best time to visit these great preserving institutions is in the summer, when the temperature outside is about 90 degrees in the shade. Indeed, if we had hay fever we should simply try the cold storage cure, which would consist of getting employment about these great refrigerators to freeze out the fever. Frost will do it every time, The cold storage plants are simply great warehouses that are built up with thicker walls than usual to resist the outside heat. These great refrig-erators are simply cooled by the evaporation of ammonia, which runs through pipes like radiators clear around the cooling rooms. They are kept at a temperature of 33 to 34 degrees, and eggs may be preserved in reasonably good condition, for six or eight months.

THE DIFFERENCE BETWEEN FRESH AND STORAGE STOCK .-We have both kinds before us on the table and will break them and give you the results.

This may come from handling, greasing or dipping in acid, and the air cell at the big end occupies one-fifth of the egg. The fresh egg shell is more of a chalky white, and the air cell is only the size of a silver five cent piece. Thus you see how much of the egg is lost by evaporation.

The yolk of the storage egg is dark, spotted, rather flat, breaks easily and when exposed soon has a thick membrane on it. The fresh egg has a round. bright yellow, full yolk, which gets no | Block No 3, Original Town of Marysscum on it and stands or floats on the white, while the other sinks through.

The white of the storage egg is duil and thin, and the chalazae, or two white membranes that hold the yolk suspended in the egg, have disappeared. The white of the fresh egg glistens, the chalazae are perfect, and for an inch around the yolk the white stands leaves a nest egg to lure the speckled in a raised ring. Beat up the whites hen back. It may be changed the next your dealer is cheating you on eggs, here is the test to catch him.

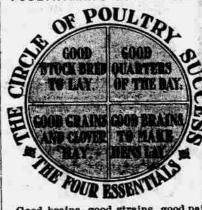

PRESERVE YOUR OWN EGGS.-Lime Method .- Slack four pounds of lime and stir in four pounds of salt. Pour this into eight gallons of water and stir well. Stir again the next day. When settled, draw off clear liquid and pour into it a solution composed of Put the eggs in a stone jar, small end down, one layer on top of the other, and pour on the solution. Keep in cool place.

Salt Method.-Put a layer of salt in out, and grandma sold them to the the bottom of a crock, then follow huckster for 10 cents a dozen. But, with layer of eggs with small end whisper it softly, the hens had been down. Fill up the vessel with alternate hatching and rehatching under that layers of salt and eggs, never allowing the eggs to touch each other. Keep in

a great many castoff eggs at poultry 75 cents a gallon. Use one part glass plants. Some set as high as 100,000 to ten parts water. Fill up your jar eggs a season. In some seasons from with layers of eggs, small end down, 0 to 60 per cent do not hatch. After and then pour on the solution. If the

These methods are all preferable to cold storage.

POULTRYMAN'S GOLDEN RULE.

Good brains, good strains, good pains and good grains bring good gains.-C.

FEATHERS AND EGGSHELLS. When the big Swift storage plant at Harrisburg burned down on Nov. 13 45,000 dozens of eggs were scrambled. The people helped themselves to omelet. Harrisburg has more wild scrambles and bad eggs than any other city

in the Union. If cold storage eggs compete with you in the winter, it is because you sold out to the trust in the summer. Less hammock swinging and more trade drumming pays the trust less and you more.

Roosters make poor egg records and feeling.

How shall & get fresh eggs? Buy We now go into the candling room, them from persons you can trust and which is pitch dark. The operator pay a little more for delivery or go for them yourself.

When the zero weather comes, do not worry about the eggs freezing in windows, cracks and knot holes. There

will be no eggs to freeze. The advertised prescriptions to make hens lay are about like one advertised to kill bedbugs. It cost 50 cents. It read thus: "First, catch your bug; second, put him on a stove; third, hit him
