QATS—Choice milling, 36c; choice feed, 30c @32c.

HAY—Per ton \$8 @10.

HOPS—Per lb. 9@12c; eastern Oregon, 10@12c.

WOLLS—Valley, 10@12c; eastern Oregon, 10@12c.

GRAIN BAGS—Per lb. Calcutta, 6c.

HIDES—Dry, 15c; salted, 6-7.

BROOMS—Per doz. \$2.25 @6.50.

There is a political crisis in Denmark. The King is said to have made preparations to flee from the Capitol in case of popular riot.

During a recent performance at the Benz Circus at Vienna, one of the lions attacked the lion-tamer named Zeth, killing and devouring him.

General Grant receives daily about twenty applications for autographs and his own gives notice that these requests cannot be complied with.

The widow of George McCullough has demanded several citizens of Columbia, S. C., to lynch her husband. She demands \$200,000 damages.

WHO WAS BRIGIT?

The name of Brigit is frequently on the tongues of people who know nothing, or little, of what they are saying. Brigit is the name of a famous British surgeon and anatomist. He made the kidneys and their disorders his special study.

Dr. Brigit was a famous British surgeon and anatomist. He made the kidneys and their disorders his special study. He first pointed out the nature of the granular degeneration of the tissues of the kidneys, and showed the demoralization of the organs, and the consequent condition that their secret powers are so impaired that the urea is not sufficiently separated from the blood.

Not the least unpleasant condition of the internal economy which is known as "Bright's disease," albumen is carried off with the watery excretions from the kidneys. The urine of the system almost as gravely as would copious and systematic bleeding, for the albumen is needed in the body, being in fact one of the great agents in nutrition. Those who labor under the disadvantage of Bright's disease are liable to uric acid congestion and inflammation, not only of the kidneys, but of other important organs. Coma, convulsions, and apoplexy may occur as part of the progress of the disease. Thus it will be seen that the malady is not a mere trifling ailment, but one involving the decay of the vital forces of the body.

"Bright's disease" is proverbially hard to cure. Say more than that, it is generally pronounced incurable. As soon as the patient begins to show clear evidences of being afflicted with this disease, the doctors advise him to tell him to prepare for death. They can alleviate his sufferings, but cannot cure him. He is left to his inevitable decay, but beyond this they give him no hope. An eminent physician in a recent address before the New York Medical Society, said: "The modern physician, in his multitudinous drugs, finds few remedies which are really curative. He is a conqueror in the prevention, not in the cure of disease. He can cure cholera, typhoid fever, or cholera, but he cannot cure a great deal better than cure. But when we find some fellow-mortals actually in the power of a terrible disease, he is constantly reminded to take to late to take of preventive measures. Something must be done towards cure, if cure be possible. The doctors advise him to tell him to prepare for death. They can alleviate his sufferings, but cannot cure him. He is left to his inevitable decay, but beyond this they give him no hope. An eminent physician in a recent address before the New York Medical Society, said: "The modern physician, in his multitudinous drugs, finds few remedies which are really curative. He is left to his inevitable decay, but beyond this they give him no hope. An eminent physician in a recent address before the New York Medical Society, said: "The modern physician, in his multitudinous drugs, finds few remedies which are really curative. He is a conqueror in the prevention, not in the cure of disease. He can cure cholera, typhoid fever, or cholera, but he cannot cure a great deal better than cure. But when we find some fellow-mortals actually in the power of a terrible disease, he is constantly reminded to take to late to take of preventive measures. Something must be done towards cure, if cure be possible. The doctors advise him to tell him to prepare for death. They can alleviate his sufferings, but cannot cure him. He is left to his inevitable decay, but beyond this they give him no hope.
