MUTUAL BENEFIT

LIFE INSURANCE COMPA'Y

ASSETS, \$51,395,903.59.

ANNUAL DISTRIBUTION OF SURPLUS VS. TONTINE OR LONG "TERM DISTRIBUTION.

Annual Distribution Shows Decidedly Best Results.

SOME STRIKING COMPARISONS, showing that the MUTUAL BENEFIT, the leading Annua Distribution Company, saved more of its interest receipts above expenses in 1892 than the Four leading Tontine Com panies combined; that over \$16,000,000 would have been saved by the Four leading Tontine Companies in 1892, and over \$120,000,000 would have been saved by the two Original Tontine Companies since organization, for policy holders, had their management been as favorable as the MUTUAL BENEFITS.

Tontine Funds Jeopardized as a General Surplus Available For Expenses.

system the LIABILITY (for deferred or confiscated dividends withheld in pool estensibly for the benefit of persistent survivors) is not only IGNORED; but this Tontine Fund is included in and unjustly jeopardised with the general surplus, and is also available for expenses. The enormous expenses of the Tontine companies a below, and the great disappointment experienced with the results of the first drawing of the Tontine lottery, prove not only this, but also that "Tontine is

ance Company the leading "Amnual Distribution" Company, on one hard, andthehwes

more available to excite hopes of legitimate gains

The following tables, compiled from Official Reports, show the relative standing of the Museual Benefit Life Insur

New York Life, the Mutual Life, and the Equitable Life, the leading Tontine or "long term distribution" companies, on the oth

hand, for the year 1892: COMPANIES. 1,338,654 2,472,341 7,419,611 7,659,278 7,621,499 ,597,595 1,139,886 2,684,489 1,408,220 1,687,135 Mutual Benefit, N. J..... \$ 6,952,833 2,633.21 2,753,538 32,047,765

But the Tomtime Companies claim that, as by their plans they withheld moneys for many years which the MUTUAL BENEFIT pays out in Dividends Annually, they should be credited annually with the additions to their assets; that

is, with the amounts "put by" during the year for the future benefit of their policy-holders. The fellowing table compares the stand

† Execss of Expenses over Interest in 1898.

COMPANIES. \$6,952, 11,804 32,047 25,040 \$ 8,295,158 12,270,811 34,455,550 25,546,920 \$119 31 108 96 107 51 102 03 MUTUAL BENEFIT, N. J. \$1,511,916 3,781,626 4,326,933 6,727,502 Equitable, N. Y

The figures speak for themselves, a the payments and accumulations of the Tontine Companies, as well as dividends, are proportionately Less than those of the Mu al Benefit, and show that \$16,648,086 would have been saved to the policy holders of the four Tontine Companies in 1892, under management as favorable as the Mutual Benefit's

RELATIVE STANDING SINGE ORGANIZATION.

The following table shows the results produced by the Mutual Benefit, the leading "Annual Distributi the one hand, and the New York Life and the Equitable Life, the Two Original "Tontine" Companies on the other hand, since

\$146,207,257 296,983,263 328,941,759 169,290,106 174,922,419

The above table shows that from \$150, 000,000 less premiums than the New York Life, the Mutual Benefit has saved \$50,000, 000 more of its interest receipts than the New York Lafe; that from \$182,000,000 less premiums than the Equitable, the Mutual Benefit has saved \$6,000,000 more of its interest receipts than the Equitable; that from \$479,000,000 less premiums, the Mutual Benefit has saved over four times as much of its interest receipts above expenses for policy holders as the New York Life and Equit able combined, by excess of payments to members, plus assets, over premiums received; and that \$120,000,000 would have been table shows that while the Mutual Benefit saved \$1,294,557 of its interest receipts above all expenses in 1892, the total expenses of

the New York Life and Equitable exceeded their combined interest receipts by over three million dellars in 1892. The Tontine Companies, like lotteries, do not publish the moneys forfeited by members unable to pay up to the end but the above tables exhibit the enormous amount of the loss to the losers, and show the great advantage of the Annual Distribution of surplus, as practiced by the Mutual Benefit.
