

THE GRUMBLER.

He sat at the dinner-table
With a discontented frown—
The potatoes and steak were underdone,
And the bread was baked too brown.
The pie too sour, the pudding too sweet,
And the roast was much too fat.
The soup so greasy, too, and salt,
Sure 'twas hardly fit for the cat.
"I wish you could eat the bread and pies
I've seen my mother make;
They are something like, and 't would do you good
Just to look at a loaf of her cake."
Said the smiling wife: "I'll improve with age,
Just now I'm but a beginner,
But your mother has come to visit us,
And to-day she cooked the dinner."
—*Little M. Hutton, in Good Housekeeping.*

A CUP OF TEA.

The Beverage That Cheers but
Not Inebriates.

Literature of the Plant That Has Made Its
Way through the Wide World—
Ideas as to Its Harmlessness.

It is curious that while the Chinese claim a remote antiquity for nearly all the products of their long-arrived civilization, they give what to them is a comparatively modern date for the introduction of tea into the Celestial Empire. And even then they trace the origin of the article to a myth. They tell us that about the beginning of the sixth century in our present reckoning, one Darma, a prince of high principle and great piety, landed among them and gave up his life wholly to devotion. He entered no temple, but, living in the open air, gave day and night to prayer and the study of God's work in nature, his aim being to so purify his life that in the end he would become absorbed into the Divine Presence. He had an idea that if he could only conquer sleep so his mind might be forever alive to the impressions and scenes around him, and in constant meditation on the unseen, the sublime purpose he had before him would surely be attained. The weakness of the flesh, however was too much for this enthusiast. Worn out by his protracted vigil, he at length fell into a profound slumber; but instead of waking up with a sense of comfort and refreshment, it was in shame and humiliation that he opened his eyes, and in an agony of grief over his failure to keep awake he took a knife and cut off the offending eyelids. Returning after a time to the spot where this extraordinary penance was performed, he was amazed to find that the eyelids had taken root and developed into fragrant and beautiful shrubs. He plucked some of the leaves and eating them felt like a man transformed. A new joy possessed his mind; he had found an elixir that conquered sleep and made persistent watchfulness a certainty. It was in this fashion, say the Chinese, that the tea plant came into existence. The story is not so meaningless as it appears on the surface. Apart from its spiritual significance, we see in the legend that from an early period tea was regarded as a preventive of drowsiness; and this, indeed, is the recommendation given to it by those Jesuit Fathers who are supposed to have been the first Europeans in China to make use of the plant.

We do not find mention of tea in literature earlier than the sixteenth century. Certain Italian writers who flourished then speak of it, and one of them, anticipating Cowper, describes it as "a delicate juice which takes the place of wine, and is good for health and sobriety." Tea must then have found its way into Europe, and the Portuguese were probably the first to import it. It was not, however, until about a century later that it was brought into England. It was so much of a rarity that a gift of a few pounds of it to the sovereign in 1664 was considered a magnificent present. In 1667 a considerable importation of the article was made into this country, the amount being nearly five thousand pounds, but it found by no means a ready sale. This was owing, perhaps, less to the price than to the prejudice with which English people in the first instance regarded the beverage. When it was first offered in our markets for £5 to £10 a pound was asked; a little later £2 10s. was accepted. Garraway, of coffee house fame, was retailing it in 1657 at from sixteen to fifty shillings a pound. In his advertisement he states that "in respect of its former scarceness and dearth it hath been only used as a regalia in high treatment and entertainment and presents made thereof to princes and grandees;" but a better era had now dawned and Garraway tells us he "first publicly sold the said tea in leaf and drink according to the directions of the most knowing merchants and travelers in those Eastern countries, and upon knowledge and experience of the said Garraway's continued care and industry in obtaining the best tea and making drink thereof, very many noblemen, physicians and merchants and gentlemen of quality have ever since sent to him for the said leaf and daily resort to this house to drink the drink thereof." Even Garraway's reduced scale of prices and accomplished brewing failed to create any great demand for the new beverage and most of the writers and wits of the time are found satirizing it. Shadwell talks of it as something "for women and men that live like women;" but Shadwell, on Dryden's showing, being "round as a tub and liquored every chink," could hardly be expected to be partial to any such mild form of dissipation. Steele was no doubt less prejudiced, but even he speaks bitterly of the new custom of tea drinking. "Don't you see," he makes one of his characters say of women, "how they swallow gallons of the juice of tea, while their own dock leaves are trodden underfoot?" This, however, was but echoing the views of economists of the times, who had said that if such a

decoction were to become a necessity it was ridiculous to pay heavily for what could just as easily be made out of sage and bramble leaves. Another complaint of the period against this new fashion of tea drinking was that it gave rise to gossip and backbiting. There is a letter in the *Gentleman's Magazine* for 1735 finding fault with ladies "who make their tea-table the mart to dispense scandal and attack reputations," and later we have a writer in the *Connoisseur* bewailing the loss of time and the profanation of the Sabbath consequent upon Sunday evening tea drinking. The beverage had by this time become pretty much a favorite at social gatherings throughout the country and neither the economists nor the wits could counteract what was quickly becoming a popular demand. Beside, tea had its champions as well as its detractors. Dr. Johnson came to the rescue among others and boldly confessed himself "a hardened and shameless tea-drinker, who has for many years diluted his meals with the infusion of this fascinating plant, whose kettle has scarcely time to cool; who with tea amuses the evening, with tea solaces the midnight and with tea welcomes the morning." When we get to Colley Cibber, we find the beverage apostrophized in this fashion—"Tea, thou soft, thou sober, safe and venerable liquid; thou female tongue-running, smile-smoothing, heart-opening and wink-tipping cordial, to whose glorious insipidity I owe the happiest moments of my life." Waller has the lines:

The Muse's friend, tea does our fancy aid,
Repress those vapors which the head invade,
And keeps the palace of the soul serene,
Fit on her birthday to salute the Queen.

Nor should Cowper's delightful home picture be forgotten in this connection, if only to give the original form of the modified words chosen as the title of this sketch:

Now stir the fire and close the shutters fast,
Let fall the curtains, wheel the sofa round,
And while the bubbling and loud-hissing urn
Throws up a steaming column, and the cups
That cheer but not inebriate, wait on each,
To let us welcome peaceful evening in.

The question seems to have arisen very early in the use of tea as to the amount of the infusion which one might safely take. Several medical men had pronounced it not only safe itself, but as conducive to health; and a Leyden physician, writing in 1671, commends it as a panacea for almost every ailment and does not think that 200 cups daily would be too much even for a moderate drinker! This, however, was interested testimony, the physician in question having, it is said, been brought over for the purpose by the Dutch East India Company. At the same time, there have been tea drinkers whose appetite for the beverage was virtually insatiable. It was not unusual for Robert Hall, the divine, to swallow twenty cups at a sitting. To Johnson, as already indicated, the beverage never came amiss. There is a story in which Sir Joshua Reynolds is credited with reminding him that he had just drunk eleven cups. "Sir," said Johnson, "I did not count your glasses of wine, why should you number my cups of tea?" Then he playfully added, "If it had not been for your remark, I should have released the lady from any further trouble; but you have reminded me that I want one of the dozen and I must ask the lady to round up the number." The story does not end here, for we are assured that as Johnson was sipping his twelfth cup he told how, on one occasion, being invited to a party to be made a lion of, he had his revenge by swallowing twenty-five cups of tea and not treating his hostess to as many words. The right method of preparing tea for drinking was not at first easily understood. The Chinese say we have not mastered the secret yet; but we have undoubtedly improved upon the instructions left by an authority in the last century, whose advice was either to boil and drink the liquid when the leaves settle to the bottom, or steep the tea overnight in cold water and boil in the morning before drinking. Crude as this system was, it was preferable to boiling the leaves and then eating them with butter, pepper and salt, as was done in some country places in ignorance of the proper use of the plant. There is reference also to a custom last century of first serving the leaves between thin slices of bread and butter and eating them as a delicacy.

The distinguishing names for tea are not expressive, as is generally supposed, of particular varieties of the plant. They relate chiefly to the conditions under which the leaves are picked. The principal black teas are Bohea, Congou, Souchong and Pekoe; while green teas are known as Hyson, Twankay and Gunpowder. Of the black varieties Pekoe stands first, and of the green Gunpowder has the preference. The Pekoe consists of the buds and very young leaves and is gathered early in spring. The Souchong is the result of the second picking, which is made about the beginning of May. Congou is the name given to the third gathering, and Bohea is a late leaf. Of the green teas, Hyson is a gathering of tender leaflets and Gunpowder is a selection of Hyson. The Twankay is the last crop of the season. China continues the principal source of the English supply of tea, though we now import largely also from Assam and India. In the United States the Japanese variety is at least as extensively used as the Chinese. The fact that other places than the Celestial Empire now cultivate the tea plant is a benefit to the consumer, not only in a larger supply of the article, but as a protection against adulteration. The best quality of tea never leaves China; it is too precious a commodity there. Besides, to enjoy tea in its choicest flavor it must be used when perfectly fresh and this freshness is impaired by the drying processes to which the leaves must necessarily be subjected for export. The effect of competition, how-

ever, upon the Chinese merchant has had the effect of making him more careful in the "sorting" of the article and we have the satisfaction of knowing that, while tea is now cheaper than ever in England, it has not fallen off in quality.—*Leeds Mercury.*

VOODOO WORSHIP.

Revolting Superstitions Prevailing Among
the Negroes of Hayti.

Sir Spencer St. John gives a very spirited description of voodoo worship in Hayti. "According to the true secretaries of the voodoos," he says, "who maintain its principles and obey its rules, 'voodoo' signifies an all-powerful and supernatural being, on whom depends all the events which take place in the world. This being is the non-venomous serpent—one so common in Hayti—and it is under its auspices that all those assemble who profess this doctrine. Acquaintance with the past, knowledge of the present, prescience of the future, all appertain to this serpent, that only consents, however, to communicate his power and prescribe his will through the organ of a grand priest, whom the secretaries elect, and still more by that of the negress, whom the love of the latter had raised to the rank of high priestess. These two delegates, who declare themselves inspired by their god, or in whom the gift of inspiration is really manifested in the opinion of their followers, bear the pompous names of 'King' and 'Queen,' or the despotic ones of 'Master' or 'Miss,' or the touching titles of 'Papa' and 'Mamma.' They are during their whole lives the chiefs of the great family of the voodoos, and they have a right to the unlimited respect of those who compose it. It is they who decide if the serpent agrees to admit a candidate into the society, who prescribe the obligations and the duties he is to fulfill; it is they who receive the gifts and presents which the god expects as a just homage to him.

"To disobey them, to resist them, is to disobey God himself and to expose one's self to the greatest misfortunes. "This system of domination on the one hand and of blind obedience on the other being well established, they at fixed dates meet together, and the king and queen of the voodoos preside, following the forms which were probably brought from Africa and to which Creole customs have added many variations and some traits which betray European ideas, as, for instance, the scarf or rich belt which the queen wears at these assemblies, and which she occasionally varies."

As for the practice of voodoo worship, it is well to say that of the votaries in Hayti there seems to be two classes—those who worship the serpent and offer animal sacrifices to appease his wrath or court his favor, and those who kill human beings and not only offer them as sacrifices, but eat their flesh. The temples of the voodoo are generally small, unpretentious wooden buildings—called by the natives *Humforto*—and are scattered generally throughout the interior of Hayti. Some of them are most incongruous in their interior decorations, and one situated a little distance back of *Heaux du Cap*, was profusely decorated with illustrations from colored weekly pamphlets, interspersed with gaudy chromo-pictures of various saints.—*N. Y. World.*

AN ALGERIAN WEDDING.

Its Celebration an Interesting Relic of
Very Ancient Custom.

A marriage celebration in Algeria is an interesting relic of ancient custom. The bridegroom goes to bring the bride, and the guests assemble outside the house to wait for his return. Soon the sound of pipes is heard coming from the summit of some neighboring hill, and the marriage procession approaches the bridegroom's house. The pipers always come first in the procession, then the bride muffled up in a veil, riding a mule led by her lover. Then comes a bevy of gorgeously dressed damsels, sparkling with silver ornaments, after which the friends of the bride follow. The procession stops in front of the bridegroom's house, and the girl's friends line both sides of the pathway. The pipers march off on one side, while the bridegroom lifts the girl from the mule and holds her in his arms. The girl's friends then surround her, throw earth at the bridegroom when he hurries forward and carries her over the threshold of his house. Those about the door beat him with olive-branches amid much laughter.

In the evening, on such occasions, the pipers and drummers are called in, and the women dance, two at a time, facing each other; nor does a couple desist until, panting and exhausted, they step aside to make room for another. The dance has great energy of movement, though the steps are small and changes of position slight, the dancers only circling round occasionally. But they swing their bodies about with astonishing energy and suppleness. As leaves flutter before the gale, so do they vibrate to the music; they shake; they shiver and tremble; they extend quivering arms, wave veils, and their minds seem lost in the abandon and frenzy of the dance, while the other women, looking on, encouraged by their high, piercing, trilling cries, which add to the noise of the pipes and drums.—*Brooklyn Magazine.*

The most prominently picturesque old building in Albany, N. Y., is to succumb to the march of modern improvements. The Staats House, southeast corner of State and Pearl, with its date, "1667," is to give way to a fine banking-house.—*Albany Express.*

The cost of postage-stamps to the Government, covering every thing, including delivery, is \$6.99 per thousand.

ABUSING WASHINGTON.

Some Scandalous Charges Made Against
the Father of His Country.

General Washington was probably as much abused as any President who has ever acted as the Chief Executive of the United States. At one time he said that he had been abused worse than a common pickpocket, and he was charged with all sorts of crimes during his administration. The Philadelphia *Aurora* was, perhaps, the most bitter. When Washington left the Presidency it had a jubilant article over the close of his term, in which it said: "If ever there was a period of rejoicing in this is the moment. Every heart in unison with the freedom and happiness of the people ought to beat high with exultation that the name of Washington this day ceased to give a currency to political iniquity and to legalized corruption. A new era is now opening upon us—an era which promises much to the people; for public men must now stand upon their own merits, and nefarious projects can no longer be supported by a name. It is a subject of the greatest astonishment that a single individual should have carried his designs against the public liberty so far as to have put in jeopardy its very existence. Such, however, are the facts, and with these staring us in the face this day ought to be a jubilee in the United States."

During a part of his Presidency Washington was called the step-father of his country, and among the paragraphs written about him was one which said: "That to talk of the wisdom of the great commander (Washington) and the great philosopher (Franklin) was a fool nonsense, for Washington was a fool from nature and Franklin was a fool from age."

In 1795 "A Calm Observer" in the *New York Journal* accused Washington of being a thief. He stated that he had overdrawn his accounts and that he owed the treasury \$1,037. Another writer accused Washington of hypocrisy and declared that he wanted to be a King. A third criticized his carriage and his aristocracy, and, in fact, all the opposition newspapers denounced him in unmeasured terms. Congress went against him during his second term and refused to celebrate his birthday, though they had been accustomed to do so, and when he refused to run for a third term they charged that he did so because he feared that he could not be elected.

It will be surprising to the people to-day to know that Washington was once charged with murder. It was during one of his Presidential campaigns. The Philadelphia *Aurora* made the charge. It stated that Washington had, during one of the battles of his early life, shot an officer who was bearing a flag of truce, and that in the papers relating to the affair he had acknowledged the act of assassination. Peter Porcupine takes up the charge in his letters and proves it to be false. The fact, however, stands that the charge was made.

Speaking of Washington, I see that some of the goody-good newspapers of the country are very indignant at the statement in Quackenbush's history that Washington at one time ate peas with a knife. I do not doubt but the statement is true. The whole literary United States at the time of Washington, however, seemed to be a mutual admiration society, and there is little unfavorable gossip about the White House dinners. I found the other day, however, Maclay's diary, giving his experiences during his term as a Senator of the United States when Washington was first President. Maclay dined with Washington a number of times, and scattered through his diary are little bits of gossip about these dinners. At two of them he describes Washington as amusing himself during all the dinner by playing the devil's tattoo upon the table with his fork. He says, speaking of one of these dinners: "The President kept a fork in his hand when the cloth was taken away. I thought for the purpose of picking nuts. He ate no nuts, but played with the fork, striking on the edge of the table with it."

SUPERSTITIOUS SIGNS.

Popular Fallacies Which Probably Originate
Hundreds of Years Ago.

If, on going out of the house, you forget something, you must under no circumstances turn back if you can possibly avoid it; if you do, you must, at any rate, sit down a moment before going out again.

If the first person you meet is an old woman, it is a sign of coming misfortune; while, on the contrary, a funeral procession denotes good fortune.

Pigs to your left bring good luck, to your right the opposite; to avert which, grasp something made of steel and the spell will be broken.

If, on setting out on a journey, you meet a sow with pigs your enterprise will be sure to be successful.

To meet two magpies portends marriage; three, a successful journey; four, unexpected good news.

To see one magpie and then more is unlucky; to kill one of these birds is irretrievable misfortune. It is also unlucky to kill a swallow.

If your left hand itches you will take in money; if the right, you will pay it out.

A ringing in the right ear means that some one is speaking well of you; in the left, you may be sure that evil tongues are busy with you.

If your right eye itches, you will see some beautiful sight; if the left, you will have cause to shed tears.

If your nose itches, you will hear some news or—will fall into the mire.—*Cincinnati Enquirer.*

A Monkey's Mathematics.

"I tell you, Bradley, that's the smartest dog in the world."
"No smarter than a monkey I saw on Walnut street yesterday. He belonged to an Italian organ-grinder. He could count."
"The Italian?"
"No, the monkey."
"Oh, nonsense, Bradley!"
"Anyhow, I saw him run up a column."—*Philadelphia Call.*

CLIMATIC CHANGES.

The Most Prolific Source of Pneumonia
and Other Respiratory Diseases.

If a blizzard of unusual severity were coming from the Northwest that would send the thermometer down 50 or 70 degrees in three hours, we should expect a great increase of pneumonia and other respiratory diseases, resulting in many deaths. Now, instead of three hours, suppose the mercury were to drop threescore degrees in three minutes—or take another step in fancy, and suppose this great change to take place in three seconds—what would likely be the effect on health? And yet we bring about, artificially, changes to ourselves quite as sudden and as severe as this.

We make an artificial climate in our houses. We live in-doors in an atmosphere heated by stoves, furnaces or steam-pipes to 70 or 80 degrees; and we pass from our parlor or hall so heated into the open air. At a step, literally in a breath, the temperature of the air has, for us, dropped 50 or 70 degrees. We may put on an extra coat or shawl and shield the outside of the body and chest, but we cannot shield the delicate linings and membranes of the air-passages, the bronchial tubes, the lung-cells. Naked, they receive the full force of the change—the last breath at 70 degrees, the next at freezing or zero—and all unprepared. We have been sitting, perhaps for hours, in a tropical atmosphere; nay, worse, in an atmosphere deprived by hot iron surfaces of its ozone and natural refreshing and bracing qualities. Our lungs are all relaxed, debilitated, unstrung; and in this condition the cold air strikes them perhaps 60 degrees below what they are graduated to and prepared for. Is it strange if pneumonia and bronchitis are at hand?

If we are in the West Indies, or even in Florida, and wish to come North in winter, we try to make the make the change gradual. But in our houses we keep up a tropical climate, or worse, for you have not the freshness of air that prevails in an open tropical atmosphere, and we step at once into an atmosphere as much colder as 40 degrees difference of latitude will make it. It is in effect going from Cuba to Iceland—or at least to New York—at a step, and we make the journey perhaps a dozen times a day. And often, while we are still shut up in our domiciliary Cuban climate, Iceland comes down upon us from an open window. Especially is this likely to occur in school-houses, where children will instinctively seek to get a breath of fresh air that has not had all its natural refreshing qualities quite cooked out of it by hot stoves, furnaces or steam-pipes. And all these sudden changes and shocks of cold come upon us while the whole system has its vitality and powers of resistance gauged down to the low necessities of a tropical climate.—*E. Y. Robbins, in Popular Science Monthly.*

CASHED THE CHECK.

How Mine Host Found His Match in a
Clergyman in a Worldly Way.

In a Western town dwells Elder R—, a clergyman very well known throughout the State for ability and shrewdness. It is pretty generally believed, on account of his evident knowledge of the ways of the world, that he was rather "rapid" in his youth. Among his skeptical neighbors is a hotel-keeper of jovial disposition and liberal heart. Whenever the elder has a specially convincing and sweeping discourse prepared it is his wont to give special invitations to his doubting friends to be present, and these are sometimes accepted with the proviso that the dominie and his lady shall meet the party at the hotel at dinner on an appointed day during the week, so they may have an opportunity to defend themselves. On these occasions dinner often lasts the whole afternoon, and the elder is obliged to parry the combined blows of the opposition.

On one occasion mine host found his match in the clergyman in a worldly way, and it was this circumstance that I set out to relate. The landlord returned on a certain Saturday evening from a trip to the far West, and next morning found him, with his wife, seated in a front pew. When the plate was passed, he felt in all his pockets, but could find only a comb, jack-knife and a circular piece of ivory marked "5," which is supposed by poker players to represent value. This latter was dropped in the plate under the vigilant eye of the pastor, but unnoticed by the sexton, whose eyes had been dimmed by age. On receiving the collection, the pastor missed the "chip," and asked the sexton for it. The latter had thrown it away, supposing it to be a mark of disrespect from some scoffer. Elder R— knew his man, and caused the representative value to be recovered. Next morning, as the landlord was dilating upon his trip to a crowd of friends in his office, Elder R— appeared, and advancing to the counter, placed the chip down with the click so familiar to connoisseurs, and asked: "Can you 'redeem' that this morning, Brother S—?"

Of course S. could not do less than hand out a five-dollar bill, and the elder departed, after expressing the hope that he might always be as lucky. Mine host says he shall not "sit down" with a preacher again.—*Pet. R. O'Leary, in Harper's Magazine.*

A Cure for Laziness.

The following singular treatment was formerly applied in Dutch work-houses to indolent and apathetic individuals: The patient was placed in a sort of large tub, into which water was kept constantly flowing through a pipe, so that in order to keep himself from drowning he had to turn a crank which pumped the water out again. The water supply and the hours of working were nicely adjusted to his strength and endurance, and the amount gradually increased every day. In one report it says: "The inactive limbs are soon brought to the required degree of suppleness, and the men very soon begin to ask for some less irksome labor, which they afterwards perform in a most satisfactory manner."—*De Amsterdanner.*

RELIGIOUS AND EDUCATIONAL

—The minutes of the last Presbyterian General Assembly show that 115 of their churches last year received additions of 50 and over each.

—Two or three clergymen in Brooklyn introduced the practice of giving brief talks to the children before beginning the morning sermon.—*Brooklyn Union.*

—Rome papers report that the Pope intends to establish a great university in the Lateran Palace. The head of the Universitas Leonina is to be the Jesuit Cardinal Mazzella.

—The Chinaman in America is being more and more cared for. According to the *New York Tribune* "twenty-two Chinese missions have been established in New York and Brooklyn since 1878, and are in a flourishing condition. What is more, a large proportion of the converts 'stick'."

—In an article published in the *Non-volite Reue*, a French traveler declares that there is scarcely a village in Syria without a Protestant church; more than one may be found even in the gorges of Mount Hermon. At Beyrout there is a German hospital and American university, where the most practical sciences are taught, especially that of medicine.

—"A Century of Protestant Missions," is the title of a book published in England by the Rev. James Johnston. It makes the startling estimate that while 3,000,000 converts have been added to the churches, there are now 200,000,000 more heathen in the world than there were when Protestant missions began a hundred years ago.—*N. Y. Witness.*

The *Illustrated Christian Weekly* follows up the remarks of President Eliot, of Harvard, in denunciation of the tendency to extravagance that seems to be increasing among collegians with some appropriate remarks of his own. Owing to this extravagance, the scale of expenditure is raised to all, and it will cost the frugal student of to-day from 50 to 100 per cent. more than it did their equally frugal fathers to take a college course in similar comfort.

—In Brazil are found the best schools in South America. They are divided into three grades—the primary, the secondary, and the technical schools. The first two correspond to the various grades of our public schools. There is but one institution in the country corresponding to our college, namely, "College Don Pedro II." in Rio de Janeiro. The lower schools are free, and the law even demands compulsory attendance.

—The Bishop of Rochester does not approve of the popular clamor for brief sermons. "Do not," he advises his ecclesiastical subordinates, "readily give in to what is often only a worldly cry for short sermons. You need a great deal more experience than you can claim now for making a fifteen minutes' sermon that shall be really useful. Either so much will be compressed into it that it will become loaded and obscure, or what is perhaps more likely, so little will go into it that it will be impossible to endure it."

—The figures laid before the Methodist conference show the steady growth of the Methodist Church in Canada. The membership is placed at 197,479. There are 1,610 ministers and probationers. The church has property to the value of \$9,975,943. The number of Sunday-schools is 2,675, with an attendance of 191,185. Sabbath-school papers have a circulation of 229,639. The work of temperance, according to the report of the statistics committee, has been carried on energetically, as is witnessed by the fact that 46,280 Sunday-school scholars have taken the total abstinence pledge.

—School-teacher—Come, Robly, surely you can spell Kentucky—K-e-n-t-uck-y—Now think what comes after? Bobby (in deep thought)—Well, I don't know which you mean. There's a George for sister Belle, Tommy Brown for me, and the man pop always tells he will settle with in the morning.—*The Judge.*

—A crier in a Massachusetts town, whose duty it was to announce auctions, lectures, etc., was needed one day, and those who went to find him were greeted by the following rather equivocal sign nailed upon his door: "No crying for three weeks on account of the death of wife."

—We must learn to accommodate ourselves to the discovery that some of those cunningly-fashioned instruments called human souls have only a very limited range of music, and will not vibrate in the least under a touch that fills others with the tremulous rapture or quivering agony.—*N. Y. Examiner.*

To Regulate

THE FAVORITE HOME REMEDY

is warranted not to contain a single particle of Mercury or any injurious substance, but is purely vegetable.

It will Cure All Diseases caused by Derangement of the Liver, Kidneys and Stomach.

If your Liver is out of order, then your whole system is deranged. The blood is impure, the breath offensive, you have headache, feel languid, dispirited and nervous. To prevent a more serious condition, take at once Simmons' LIVER REGULATOR.

If you lead a sedentary life or suffer with LIVER, KIDNEY AFFECTIONS, avoid stimulants and take Simmons' Liver Regulator. Sure to relieve.

If you have eaten anything hard of digestion, or feel heavy after meals or sleepless at night, take a dose and you will feel relieved and sleep pleasantly.

If you are a miserable sufferer with Constipation, Dyspepsia and Biliousness, seek relief at once in Simmons' Liver Regulator. It does not require continued use, and costs but a trifle. It will cure you.

If you wake up in the morning with a bitter, bad taste in your mouth, TAKE Simmons' Liver Regulator. It corrects the Bilious Stomach, sweetens the Breath, and cleanses the Furrowed Tongue. Children often need some safe Cathartic and Tonic to avert approaching sickness. Simmons' Liver Regulator will relieve Colds, Headache, Sick Stomach, Indigestion, Dysentery, and the Complaints incident to Childhood.

At any time you feel your system needs cleansing, toning, regulating, without violent purging, or stimulating without intoxicating, take

Simmons' Liver Regulator.
