Pruning Fruit Trees.

Though much has been written on this subject, still it seems to be but age orchardist.

The writer has in mind an orchard, formerly one of the best in the State in quality of fruit, that several years ago was entirely ruined by pruning. Great limbs as large as a man's thigh full bloom, and the result has been that the trees have died-a few each year-till half of them are gone, and they are still going.

killed outright in just that way.

trunk, finally rotting off, after which reign of green pastures short. the wound will heal over leaving scarcely a scar.

dangerous cracks will be lessened.

not so treated.

be necessary to say something of the ment. manner in which the growth in plants is brought about, though anything like a full statement of the process space.

Briefly, then, when two fluids come in contact, or are separated by only too much as a preparation for wheat, thin porous walls, as is the case in for it is hardly possible to get too fine plants, a flow takes from the lighter to tilth. the dense fluid until both are of equal The grain in the Tammany country density.

Now, as evaporation from the leaves is continually going on, it follows that the sap in them necessarily becomes thickened, and according to the principle stated above, the lighter fluids are drawn up.

Again, don't prune too much. Get the young tree shaped up " in the way grows older, and also if too much season.

part of the country. What has been said about pruning J. P. Paul, a few miles south of Oyscan result in no harm to the tree. The practice that I have found most satisfactory is not to interfere year until autumn, or before growth away all growth that is not wanted.

number, and that for not over eight months in the year. The remaining four months (and in some parts six Devoted to the Interests of Farmers months) it takes as much more land to furnish hay and other feed for stock, in addition to which will be the cultivating, curing and storing the same for winter use, which must be fed out. There is gr-at loss of time in cold, imperfectly understood by the aver. rigorous climates where it is necessary to keep stock warm. And during this season of the year it is impossible for

young stock to grow as fast as they do here, so that it is summer before they renew their growth. In this mild, salubrious climate the stock never stop were lopped off when the trees were in growing, and at two years are as large as stock in the East at twice that age

> Mr. Stewart, recenty from a trip East, and referring to the question of

After a careful sudy of the subject ensilaging in Oregon, says that he has for many years I have arrived at the seen many different plans of storing following conclusions, the first of ensilage in the East, and has given which is never to lop off the best and the question some consideration in thriftiest growth for the sake of syme applying the principle here. He has try, for this is just the growth needed been advised by Jared Miller, whom to make a healthy, profitable tree, and he regards as good authority, that enmany trees are irrevocably ruined, or silaging need not be given the consideration in this State where we have friends. The talk was stocks, of course

Second-Don't cut branches of any mild, moist winters, and grasses are size too close to the trunk. When a lasting and root crops abundant, as branch is left a few inches in length it the dairymen have to do in the East, get ing warm when the oldest member of dies to within a short distance of the where the winters are rigorous and the

It is said that the amount of "dead" The better way then, is not to cut capital invested in farm fences in the below the swell of the limb next to the United States alone reaches the imtrunk ; the wound will be smaller, and mense aggregate of \$5,000,000,000, and as the cut may be nearer at the right that the construction of new fences angle to the branch, the liability to and the renewal of old ones involves an outlay of no less than \$200,000,000 Third-Don't cut off large limbs annually. It is difficult to fix an apwhen it may be avoided, as such course proximate idea of what such immense must necessarily weaken the vitality sums as these represent, but some conof the trees. To verify this, the reader ception of this enormous investment may cut back severely in the spring may be formed from the fact that it any tree, even a wild one, and it will nearly equals the capital stock of all not start into growth so soon as one the railroads of the country, while the annual expense almost parallels the To make this matter plain it may entire revenue of the national govern-
