AGRICULTURAL.

Devoted to the Interests of Farmers and Stockmen:

How to Raise Alfalfa.

A correspondent of a California paper gives the following as his expe rience in the cultivation of alfalfa;

Alfalfa as a fodder plant is coming more and more into general use and favor, both for horses and cows, and, best butter brought to this town, and in fact, all kinds of stock, hogs not excepted.

I am inclined to think that there is no fodder plant that will continue in breeding to the best bull, making the The ship Firth of Olna has been lost full bearing equal to the above, if properly handled.

Seven years ago this coming March I sowed about three-fourths of an acre, points and make the poorest and mean-John Neave deliberately murdered and for years this block has furnished est stuff that goes to a market! his father, Joseph Neave, at Falmouth, feed for a span of horses and a cow en-Ky., in a dispute over a division of tirely, excepting a few pumpkins, and I have sold considerable hay. For the past three years my horse has had no grain whatever. As for my cows, I find that they do far better, both in regard to milk and butter, on alfalfa alone, than cows do in the States with a good supply of milk feed. This plant taking the horse out of the shafts, and keeps green the year round, for we seldom have frost in this country to kill

the young growth. My experience leads me to advise horse is, place your hand over his nose wrecked on Lake Michigan during a those who desire planting alfalfa to and shut off his wind until he wants plow very deep (subsoiling is far bet to go. Fourth, then, again, take a thirty pounds of seed, not less, to the the fore legs just below the knee, tight Two laborers, Joseph Gahack and acre and brush it in lightly. By this enough for the horse to feel it; tie in tunnel, on the Northern Pacific, after Harry Doyle, were instantly killed by plan you gain three points: First, you a bow-knot. At the first click he will the premature explosion of a blast on get a good stand, which can be obtruding from their sockets, and their third, you will get a greater amount of hay. Unless you can irrigate, I would A washout occurred on the Erie advise sowing in the fall after the first

We usually cut four times the first year after seeding; after that from six several cars passed over in safety, but to eight times during the year. It is twenty one cars of cheese went down usually cut when fairly in blossom. If it begins to lodge it may be cut sooner. The earliest I ever commenced harsylvania was one of the greatest and vesting was the 20th of March, and finished the 5th of January, cutting umbia river basin this season at 17, down in Wyoming County, N. Y., this eight crops that year. As for the yield 000,000 bushels. that depends very materially on the care given. The average is from onehalf to two tons per acre at a cutting. Five crops of hay and one of seed are making compost. Apply the compost often grown in one season.

When the gophers are troublesome I advise, after a newly seeded track is settled, to throw out a ditch twelve or fourteen inches wide and sixteen or eighteen inches deep; then sink an old the groin, and he will die. Officer leaky oil can down in the bottom of natural curiosity in the way of a cow Warden then shot McNerny in the the ditch so that the top of the can will be flush with the bottom of the ditch. By this device you can keep The boiler of the Houston Lumber the gophers out entirely. In case you Company's saw and planing mill, at can irrigate, this ditch will carry a head Houston, Texas, exploded, wrecking of water (100 inches), and by striking the whole building and killing A. G. a tapoon across you can flood your Cal., at an elevation of 1,400 feet, has Wells, general manager of the com- whole ground. I have used this kind allotting it to the Indians, has been let cide at her home in Pleasant valley, pany, and Andrew Henry, engineer, of ditch for several years with marked

My mode of treatment with alfalfa is this: After this has been sown uses. The express ran into a freight train three or four years I apply a sharp standing on a siding at York, Ind., harrow, well weighed down, say 200 kfiling the engineer and fireman of pounds, and give it a thorough appli- don't leave the land to grow up in money was made in the business, but wreck the train, as the switch was also levels the surface of the ground, corn planted in August will make good known to have been in good order To secure the greatest amount of feed cow feed before frost, and if it did not half an hour before it was found it is desirable to cut it instead of pas make anything would pay to plant and turing it. Never allow stock to tramp cultivate it to keep the ground clean. over and pack the ground.

Some object to alfalfa, saying that stock fed upon it are liable to bloat. sugar for horse or cow, place it well lieved repeat the dose in twenty min-Cramer, Portland; J. W. cents a pound more, and the people to

run after him for it. It is no mean thing for the people to say: "Such a farmer makes the we indeed cannot get all we want, for everybody wants it." Such a man takes a pride in having the best cows, most butter, having the name for the very best, and getting the highest price. But how many neglect all of these

Treating Balky Horses.

First, pat the horse on the neck, examine him carefully, first on one side then on the other; if you can get him a handful of grass, give it to him, and speak encouragingly to him, and jump into the wagon and give the word go, and he will generally obey. Second, turning him around in a circle until he is giddy, will generally start him. Third, another way to cure a balky probably go dancing off. After going a short distance you can get out and remove the string, to prevent injury to the tendons. Fifth, again, you can try the following: Take the tail of the horse between the hind legs, and tie it by a cord to the saddle girth. Sixth, the last remedy I know is as follows: Tie a string around the horse's ear, close to head. This will attract his attention and start him,

than the supply. - N. Y. Sun. -Great speed has been attained in the manufacture of rifles. One hundred and twenty barrels can be rolled in an hoor by one machine; they are straightened cold and bored with corresponding speed, and even the riding is now done automatically, so that one man tending six machines can turn out sixty or seventy barrels per day. With the old rifling machine twenty barrels was about the limit of a day's work, but the improved machines attend to every thing after they are once started, and when the rifling is completed ring & bell to call the attention of the work man. He is thus enabled to attend a many as six machines at a time. -N. Y

PUNGENT PARAGRAPHS.

-A live man should not want the earth, he should be above it .- Texas Siftings.

-"What is education?" asks a writer. Well, it is something a college graduate paper man .- N. Y. Mail.

-Many a young man who has been too bashful to propose to a girl has had her father come into the parlor at eleven o'clock and help him out.-To-

-The man who invented the English language must have been a humorous sort of chap. Otherwise he would never have called servants "help." merville Journal
