PUBLIC OPIN

Prepagating Lobsters Artificially.

The first experiments in artificial

opagation of lobsters were made sim-

y in class jars with sea water that was

janged daily. Even under these primi-

ye conditions the newly hatched fry

rived and grew to be of some size and

falthy. Any one who desires to rear

bsters by hand can accomplish the pur-

so must quickly by keeping the spawn

aring females in suitable pends or

nks until the young come out. In

ising the animals on a large scale, wever, it would be best to separate

e eggs from the lobster and spread

em upon trays, allowing the water to

produte among them, as is done with lmon eggs. By this method much

uble would be avoided, as well as the pense of feeding the adult hen lob-There is no reason apparent wherefore

e same success should not be obtained.

ith lobsters as has been achieved with

lmon, which have been made to swarm.

ce thore by myrinds in streams depote ated by improdent fishing. Already

e lobsters on the North Atlantic coast

e rapidly vanishing, and unless meas-

es are soon taken for supplying their

ace by artificial propagation there will

none left. Apparently, however, it

ill be entirely practicable to turn out

on the depleted grounds many mill-

us of young lobsters yearly as soon as
