SMOOTH BROME GRASS.

Capidly Establishing Reelf In Favor

Smooth brome grass has within the past two or three years been widely tested throughout the dry region of the west and northwest, as well as elsewhere, and has proved probably the most valuable of recent introductions among grasses for hay and pasture. It gether it is a safe variety to plant." quickly forms a thick, firm turf and appears to grow with equal vigor in Canada and in Tennessee, remaining green throughout the winter season in the intter state. It is the strong perennial character of this brome grass and its unusual drought resisting qualities which recommend it particularly for the semiarid region. It will thrive on loose, dry soil, but of course the better

the soil the greater the yield. All kinds of stock eat it with relish. rows 3 to 312 feet apart, dropping sin and while some investigators pronounce its nutritive value comparatively low, others claim that chemical analyses show it to be rich in flesh forming ingredients, much more so than timothy, and stockmen give excellent accounts of it. It is also especially recommended as a grass for reseeding worn meadows or pastures.

The wonderful rapidity with which it grows, producing heavy crops and luxuriant pasture, and its thoroughly permanent character make very proming the value of smooth brome to the "dry farmer." One authority on grasses says of it: It is very hardy and not injured by severe spring and fall frosts when once established. As it starts to as necessary that water should not be grow very early in the spring before sllowed to attack the substructure any of the grasses upon the native from below as that it should not be prairies show any signs of life and re- permit mains green and succulent far into No- Especially is the former provision esit will supply the long felt sential in cold climates, where if water want of early spring and late fall pas- is allowed to remain in the substructure

Smooth brome grass will withstand broken up and destroyed by frost and changes in the temperature without inwhere the road runs through low, wet jury. Its ability to produce good pasture during long periods of drought far lands or over certain kinds of clayey exceeds that of any other cultivated variety. In Canada, where it had been ed to a temperature of several degrees below zero and not covered by snow, it was entirely uninjured. Without doubt it is the grass for the semiarid regions of the west. From the reports received it is evident that it is very little influenced by the changes of climate. It does well in California, Kansas, Montana, North and South Dakota, Tennessee, Utah, Wyoming and all parts of Canada.

In California, Washington and Oregon smooth brome will succeed with or without irrigation. In Colorado it retains its fresh green appearance until soils surface drainage is not all that is December, affording excellent pasture, necessary. Common side drains catch During the severe droughts in Kansas, surface water, and surface water only. Montana and Nebraska it lies down Isaac Potter says: and appears dead, but as soon as rain to make about the same growth as or chard grass, but withstands dry weather much better.

The Ben Davis Apple. "The Ben Davis apple in many ways has given pleasure to thousands and brought dollars to hundreds, but no

WATER DESTROYS ROADS.

"Many miles of road are on low, flat falls it becomes green again. It is now lands and on springy soils, and thouwell established in the Dakotas and is sands of miles of prairie roads are for grown extensively both for hay and many months in the year laid on a wet pasture. In Indiana and Ohio it is said subsoil. In all such cases-and, indeed, In every case where the nature of the ground is not such as to insure quick drainage-the road may be vastly benefited by underdrainage. An under drain clears the soil of surplus water, ble the formation of deep, heavy, fro-zen crusts, which are found in every undrained road when the severe winter weather follows the heavy fall rains This frost causes time-tenths of the difficulties of travel in the time of sudden

or long continued thaws. drained hands are always difficult to manage and expensive to maintain, and they are liable to be broken up in wet weather or after frosts. It will be much cheaper in the long run to go to the expense of making the drainage of the subjacent soil and substructure as perfect as possible. There is scarcely an earth road in the United States which cannot be so improved by surface or subdrainage as to yield benefits to the farmers a hundred times greater

in value than the cost of the drains "Underdra'us are not expensive. Ou the contrary, they are cheap and easily way and according to the rules of comnion sense a good underdrain will last here he fived or died. All that is for ages. Use the best tools and mawith a clear conscience. Slim fagots of wood bound together and laid elphia there are probably more of lengthwise at the bottom of a carefully graded drain ditch will answer fairly well if stone or draintile caupot be

On Festive Occasions It Arrays Itself In Hired Finery. old companions on the wedding night bire their gowns and veils.

S:iii More Counterfeiting.

It is only by a state aid law that the city population can be enabled to give farmers the help they are willing to give and which justice requires them to give. Strict justice would require, in fact, that the state should pay the whole cost of road building and maintenance instead of one-half, as is pro-posed by this bill. The whole people have equal rights in the use of the and they have substantially equal benefits from them, for, though the people in cities may rarely use them, they are used constantly for the Without them the cities and the people of cities and towns

Regular Meals. Regularity of meals is a more powerful

Regularity of means is a more powering factor in our comfort than we realize. With the exception of the bite which is often taken to induce sleep food should be taken at regular intervals. Promiscuous and irregular enting brings a train of disorders, of which one of the most annoying is a flushed face. The habit of eating between meals should be frowned in manle sugar, which was a dull down if one cares the least little bit for the complexion, or, better still, it should never be taken up. I know what you are going to say—you learned it in child hood, when you were not responsible for your acts. Yes, I know, but make amends for your mother's carelessness by bringing up your own children on ap-proved and improved methods.

For Over Fifty Years.

An old and well tried remedy. Mrs. Winslow's Soothing Syrup has been used tor over fifty years by millions of mothers for their children while teething, with perfect success. It soother the child, softens the gums, allays al. pain, cures wind colic and is the best remedy for diarrhoea. Is pleasant to the taste. Sold by druggists in every part of the world. 25 cents a bottle. Its value is incalculable. Be sure and ask for Mrs. Winslow's Soothing Sy rup and take no other kind.

A facetious man who rejoices in the name of Bird conceived the idea of calling a convention of all the people in Philadelphia who belong to his tribe. Of course it was a Joke, but a glance through the pages of the directory convinced him that such a gathering would be a big one. He discovered that there were just an even 100 plain Birds, but the variety of those who specified their kinds was appalling. The list, as far as he went, was as follows: Doves, 15; Engles, 8; Finches, 21; Fowls, 3; Hawks, 30; Jays. 6; Larks, 6; Jencocks, 20; Pigeons, 1; Parrots, 40; Partridges, 30; Sparrowhnwks, 7; Sparrows, 7; Wrens, 10; Robins, 15; Nightingales, 9; Flickers, 5; Thrushes, 4; Canarles, 3; Geese, 2, and Turk-y, I. There were two Chip-peys, and Philip Ducks upheld the dignity of his branch of the family.— Philadelphia Record, Double Trouble

PROMPT, SURE CURE

IN THE SUGAR BUSH. Maple Sugar Making - The Modern

Though tons of maple sugar are made, for the most part in New York and Vermont, there are probably many people living on farms throughout the United States who have no more clear idea of how maple sugar is made than they have of the production of electricity, says a writer in Farm and Fire-side, from whose description of the process the following items and illus-

trations are reproduced: The sugar maple is so called on account of the sugar contained in the sap. The person with no experience can hardly tell the difference between it and water, as it is clear and sparkling and has but a faint taste of sugto make it a little sickish.

In the fall the greater part of the sap goes from the trunk and branches into the roots, where, burled deep in the

THERE AND DOOR OF COLLECTING SAP ground, it will not be chilled. In the February or first of March, according as the season is forward or backward, the sap begins to ascend the body of the tree, the greater part in the outer could not exist for a day; destroy them. layers of the tree. Securing this sap as it ascends and boiling it down conmust scatter instantly to find subsist- stitutes the work of maple sugar mak-

the early days before the bit and brace ply of water can be contained in a tree an oblique notch was cut into the tree near the ground, and from this wound Now is your opportunity. There is the sap would of course flow. Then uninto this was driven a short wooden made by digging out basswood blocks. After the bit and brace came into use Constipation is cured by Hoe .'s a hole was bored into the tree, and a round spout made from a piece of sumae from which the pith had been burned out was driven into the bole to convey the sap to the trough.

Next the wooden bucket came into use. By driving a nail into the tree under the spout the bucket could be bung anywhere on the tree.

and hear a beautiful poem every day." There is no doubt that children would be

FROM ECZEMA!

The state of the s

No Torture Equal to the first symptoms of Eczema, but it is not long before the little redness begins to itch and burn. This is but the beginning, and will lead to suffering and torture almost unendurable. It is a common mistake to regard a roughness and redness of the skin as merely a local irritation; it is but an indications of ointments, salves, etc., applied to the surface. The disease itself, the real cause of the trouble, is in the blood, although all suffering is produced through the skin; the only way to reach the disease, therefore, is through the blood.

through the skin; the only way to reach the disease, therefore, is through the blood.

Mr. Phil T. Jones, of Mixersville, Ind., writes:

"I had Ecrema thirty years, and after a great deal of treatment my leg was so raw and sore that it gave me constant pain. It finally broke into a running sore, and began to spread and grow worse. For the past five or six years I have suffered untold agony and had given up all hope of ever being free from the disease, as I have been treated by some of the best physicians and have taken many blood medicines, all in vain. With little faith left I began to take S. S. S., and it apparently made the Ecrema worse, but I knew that this was the way the remedy got rid of the poison. Continuing S. S. S., the sore healed up entirely, the skin became clear and smooth, and I was cured perfectly."

Ecrema is an obstinate disease and can not be cured by a remedy which is only a tonic. Swift's Specific—

S. S. FOR THE BLOOD

—is superior to other blood remedies because it cures diseases which they can not reach. It goes to the bottom—to the cause of the disease—and will cure the worst case of Ecrema, no matter what other treatment has failed. It is the only blood remedy guaranteed to be free from potush, mercury or any other mineral, and never fails to cure Ecrema, Scrofula, Contagious Blood Poison, Cancer, Tetter, Rheumatism. Open Sores, Ulcers, Boils, etc. Insist upon S. S. S.; nothing can take its place.

Books at these diseases will be mailed free to any address by Swift Specific Company, Atlants, Georgia.

the main consideration, and there was no incentive to keep out the dirt and cinders, for black sugar was just as sweet, and sugar lighter than chocolate was looked upon as having been adul-

The next improvement was the large pan placed mon an arch made of stone or brick. About the same time tin buckets came into use. A little inter the metallic spout was invented. This is now of such shape that it fills but a small portion of the hole bored in the tree, but is held so firmly that the bucket is supported by it. It allows sap to flow from the outer layers of the tree where there is the greatest amount of sap, and that which makes the whitest

A few sugar makers have their plant so arranged that the sap, or sirup, does not touch wood after the sap leaves the tree. At the present time color is an important factor in the value of maple sugar, and as wood tends to color it wooden utensils of all kinds have been discarded as far as possible The maple sugar now made is of a light straw color. Any darker than

AVERAGE BOILING PLACE OF TODAY. that will not command the highest refined sugar is suspected.

The sap is gathered in a tank holding about three barrels proceed on a low sled with wide runners. Roads are made through the sugar bush so the gathering tank can be driven near all

GOOD WATER FROM TREES.

men Tap With an Auger, In many sections of the forest lands of the south during the dry seasons a man may walk for miles without finding a stream of water or a spring by which to queuch his thirst. If, how ever, he is an experienced hunter and woodsman, he will not have to drink water from the stagnant pools in order

to keep life in his body. Queer as it may seem, an experienced man can bunt for days through such dry tracts and yet experience no inconvenience on account of the lack of water. Nature has provided a means which is only known to the initiated. Every old huntsman carries with him when going on a long hunt a small auper, by which he can secure a refreshing drink and water to cook with at any moment.

A cottonwood tree or a willow is the well which the wily huntsman taps. He examines each tree until he finds one that has what a woodsman calls a "vein." It is simply an attenuated protuberance. By boring into this "vein" a stream of clear water will flow out. It is not sap, but clear, pure water. The huntsmen say that the water is better than the average to be had from ordinary wells. There is no sweetish taste about it, but it has a strong flavor of sulphur and is slightly carbonated.

The first thing is to get the san. In not easily be explained, but that a supis not so surprising. The fact of its flowing is the wonderful feature, show ing that is must be under pressure or. considered that the trees furnish the ground is literally baked, it is the more depth into the ground .- Memphis Scim-

Training Children.

Children are most susceptible to strong impression previous to their seventh year. and they learn more during the first seven years of their lives than at any other time. Goethe, who studied everything in the human calendar, said this of children, Every child should see a pretty picture

Modern Woman Must Eat. A woman of 30 of today does not pre-tend to be a girl, whereas the spinster of the last generation often made herself ri-diculous at 45 by aping the reticences, the blushes and the childish appetites of

One wonders, indeed, what our comic writers would have done without her. For about 100 years she has flourished in English literature, a mixture of uneducated fool and narrow minded prude.

This curious creature, of course, was not supposed to cat. When she went out to dinner, she let the dishes pass, toyed with an ice and was held to be a pattern of all the domestic virtnes. Mr. George Meredith's ideal heroine is

a ludy who can play a good kuife and fork, and no doubt it will be for the ultimate benefit of the race, as well as the immediate benefit of the current menu, if this species of woman is encouraged.—New York World.

Girls' Ambition.

Many girls will have noticed that as our lives advance our ambitions are apt to become more simple. We learn gradually to know that in smaller duties better fitted to our hands lies the greatest happiness, and the possibility for fullest and richest development. Almost every girl, when she first begins to realize that she will probably never fulfill all her girlish will probably never fulfill all her girlish ambitions because they are many of them beyond her possibilities, will have the luclination to "give up," as the children

This is apt to be the beginning of real discontent, and it ought to be battled with. Let a girl once try to fully realize what it means to be the inspiration of some one person's life, the sunshine in the darkened lives of some one or two people, and she will then understand how it may fill her life almost to the brim with hap

Things to Know. Good minearoni is of a yellowish tint, does not break readily in cooking and swells to three or four times its bulk. In estimating the amount of chicken saind to be served to a company the pro-portion of five large chickens to 30 per-sons would be a safe one. Clothes turned right side out, carefully folded and sprinkled are half ironed.
