—DEALERS IN ALL KINDS OF—
LUMBER
Both rough and dressed material on hand and orders of any size promptly filled.

FARM GARDEN LANGUID

Many a school-girl is said to be lazy and shiftless when she doesn't deserve the least bit of it. She can't study, easily falls asleep, is nervous and tired all the time. And what can you expect? Her brain is being fed with impure blood and her whole system is suffering from poisoning. Such girls are wonderfully helped and greatly changed, by taking **Ayer's Sarsaparilla**.

HOTBEDS.
One of Greenhouse Traps—An Improvement in the Hotbed. On all appliances for the use of glass in hotbeds, the most common, is by far the most common, from its small bed of a few sashes suited to a summer garden up to the large range of hotbeds owned by market gardeners. The ordinary making of hotbeds is well understood, but there are certain variations from the usual form which are not so well known, although worthy the consideration of progressive gardeners. To this attention is called in an article originally appearing in *Vick's Magazine*. The writer says:
First we will speak of a form of hotbed which is somewhat in the nature of a greenhouse.
Fig. 1 shows such a hotbed of greenhouse form in cross section. The width of the house is 14 feet. The roof con-

sists of six foot hothead sash supported by iron pipes at intervals of eight feet, as shown in Fig. 2. The principal advantage of such a house is that the work of painting, watering, etc., can be done in the house, and the plants are not exposed to cold winds as they are ordinarily made. There are some gains also in that it is a more economical as well as in that of being able to replenish any part with fresh manure in case this is desired for increased heat.
First, an excavation two feet in depth and the size of the house was made, the soil being used in part for banking against the house for shelter and to carry away moisture. The sides consist of two inch sawdust boarded up on the inside and at the top on the outside. The sash supports, of two inch stuff, at one end rest on the outer walls, while toward the other end they rest on two plates two and a half feet apart, which run lengthwise with the iron gas pipes at intervals of eight feet. These plates are supported by the wall and the sides of the house. The height of the walk at the center is six and a half feet. The manure spaces are of the same extent as the beds proper and are about three feet deep. In the boarding up of the manure space at the walk it is arranged to have the greater part of the board surface movable, being kept in place by the buttons which are attached to the stationary boards at the top and bottom.

As the Canadian farm stations large whole potatoes did not give a corresponding yield to the weight of tubers planted, and the result points to the inadvisability of planting very large sets. Small whole potatoes were more satisfactory and give promise of furnishing in a favorable season means of disposing of some unmarketable potatoes. The result from seed only shows the error of a prevalent theory as to their worthlessness for seed purposes.

To Stop a Runaway Horse.
Some device by means of which fractious or runaway horses may be controlled has long been needed, says the *Tennessee Farmer*. The great difficulty is that one may know of a most excellent check, but it is sure to be in the harness room or hanging on the hook in the barn when it is most needed. One objection to all such attachments is the necessity for an extra line or cord by means of which the check is to be operated. A simple appliance consists of a couple of small pads attached to the sides of the bit and connected by the nose of the horse by an appropriate and simple band. These pads bear directly upon the nostrils. When not in use, they merely touch or rest lightly upon the nose. The extra rein when pulled upon steadily presses these pads into the flexible skin over the nostrils and partly shuts off the animal's breathing powers. No horse can run any distance without taking breath, and the result is almost immediate confusion and suffocation, which bring the animal to a slow halt or a complete stop. The greatest care must be taken not to pull too long on this line, as the horse may empty his lungs and fall from exhaustion. It is desirable that the pads be so arranged that the nostrils will not be entirely closed, as in inexperienced or excited hands, the animal might lose his life before the driver could recover sufficiently to release the strain on the stoppers.

Pearls and Tears.
"What splendid pearls the bride has! How can a man give his bride pearls? They mean tears."
"Oh, that's superstition! Besides, they are imitation pearls."
"Well, if she knows that the tears will be genuine, at any rate."—*Philadelphia Whittier*.

Backache.
So many women suffer from it. It mars alike their hours of work and pleasure. Backache is generally a symptom of derangement of the delicate womanly organs. It is useless therefore to apply plasters and similar local treatments. A cure can only be effected when the cause of the ache is removed. The use of Dr. Pierce's Favorite Prescription will cure the inflammation, ulceration and displacement which cause backache, side-ache, headache and many other aches and pains. "Favorite Prescription" contains no alcohol and is absolutely free from opium, cocaine and other narcotics. It agrees with the most delicate persons.
"I took your medicine six months and I feel now like a new person," writes Miss Annie Stephens, of Belleville, Wood Co., Mo. "I have no backache, no headache, no nervousness, no dizziness, no fainting, no sickness, no indigestion. I took seven bottles of Dr. Pierce's Favorite Prescription, and seven bottles of his 'Golden Medical Discovery.' I think there is no medicine equal to Dr. Pierce's Favorite Prescription. I feel well and think there is no medicine equal to Dr. Pierce's Favorite Prescription."
The Medical Adviser, 1008 pages, sent free on receipt of stamps to pay expense of mailing only. Send 21 one-cent stamps for paper cover, or 31 stamps for cloth, to Dr. R. V. Pierce, Buffalo, N. Y.

THE BEGINNER.

Some of the Troubles He Has and Mistakes He Makes.
The question of how to begin in the poultry business is one of importance. There must be beginners or there can be no true fanciers, but a very serious fault exists in many young minds—they expect to become fanciers at the very start. They imagine that the poultry business consists in merely buying a few good fowls and letting the stock produce some more of the same kind. They hold the belief that "the produce like," and therefore if they place a pen of prize winners at work the next season will see them surrounded with a host of equally valuable specimens.

The fact is, the breeding of prize winners is an art. This is owing to several causes: First, the tendency of fowls to revert to type—that is, the strongest element in the blood is the disposition to get back to the original parentage in style, whatever that may have been. This creates a large percentage of inferior birds in every flock. In the second place, prize winners are in one sense artificial specimens, which have no fixed standard. We say this in face of the fact that a standard of perfection is published by the recognized authority—the American Poultry Association. But no two judges of fowls agree in their detailed interpretation of that work, and no exact reading can be given it. Take the Plymouth Rock, for example. This breed comes nearest to being a satisfactory popular one, but there are few breeders who coincide on the first point—namely, shape. It therefore follows that wide diversity of opinion obtains as to what shall be called worthy of a prize. Even with the established breeds color and shape are hard to maintain.

These are the principal reasons why novices fail the second year and become discouraged. Experience in the work and familiarity with the fanciers' trade are essential to success. No man can spring into high place in any business or profession and hold his rank without having a foundation in knowledge.

The way to begin is to take a single breed and study it in the light of publication and in one own yards. Comparison with the members of an educative series, but no beginner should attempt to sell birds as superior stock until he actually knows what other men call good fanciers' stock.

The sowing of birds at low price is a mistake. A fancier's fowl is never sold for \$1 or \$1.50. Good birds for egg and meat purposes can be had at that rate, but not the kind that gets the winners at shows. A single specimen may be just the bird needed to mate with an established family, but the chances are that it will in the hands of a novice cost back to a ruinous weakness. Only confirmed line bred birds maintain stamina.

If a beginner is contented to start as a beginner, he can pretty surely count on developing into a fancier, but if he jumps to the front without experience he is likely to jump back again out of sight.

This rule holds good with those who aspire to become "large raisers" in one year. It is safer to spread that ambition over several years. In time the breeder of fowls for market may reasonably calculate on becoming a fancier, but there are lessons to learn all along the way, and the necessary qualities to insure success in any business—arc perseverance, pluck and industry.—*American Poultry Journal.*

Life's Lessons.
A child came close to his teacher's side, his book light clasped in his little hand. "Teacher," he said, with wistful eyes. "We are coming to words that I don't understand." I've turned the pages over and over, And the words are so big, and they're all so new. When we come to the lessons where they are put, Oh, teacher, I don't know what I'll do!"

The Making of Man.
And the high gods took in hand
Fire, and the falling of tears,
And a measure of sifting sand
From under the feet of the year,
And forth and drift of the sea,
And dust of the laboring earth,
And bodies of things to be,
In the house of death and of birth,
And venous with weeping and laughter,
And fashioning with laughing and love,
With life before and after,
And death beneath and above,
For a day and a night and a sorrow
That his strength might endure for a span,
With travail and heavy sorrow,
The holy spirit of man.
—Swainburne.

Influence.
The smallest bark on life's tumultuous ocean
Will leave a track behind;—
The lightest wave of influence, once in motion,
Extends and widens to the eternal shore.
We should be wary, then, who go before
A myriad yet to be, as we should take
Our bearing carefully whose breakers rear
And fearful tempests gather. One mistake
May wreck unnumbered souls that follow in our
—Sarah K. Bolton in *Christian Advocate*.

GEMS IN VERSE.

Wheat and Clover.
On one side slept the clover,
On one side sprang the wheat,
And I, like a lazy lover,
Knew not which seemed more sweet—
The red caps of the clover,
Or the green gems of the wheat.

Think For Yourself.
There is one man who through the world will always make his way,
The man who dares to reason for himself,
Who doesn't take as gospel all that other people say,
Who takes duty dogmas on the shelf,
Who dares to look clear-eyed at truth and follow where she leads,
Who dares to take a stand, although alone,
Who isn't always ruled by ancient precedents and creeds—
The man who has a thinker of his own.

War Is Crime.
Pride of nations, work your will;
While its powers are in their prime;
Hedge it round with tact and skill,
Paint it fair in prose and rhyme;
Tinge it gentler than the same
That darts through battle's mist;
Stain it with the gold you spill
Brighter than the daffodil.
Work your will, yet—war is crime.

Life's Lessons.
