MARTIN BROS., PROPRIETORS.  
All kinds of rough and dressed lumber on hand or cut to order.  
**200,000 Feet in Stock.**  
Slab wood for cook stoves or harvest engines at 50 cents a load.

**THE ARMY RETIRED LIST.**  
The retired list of the regular army includes 794 officers. Of this total there are 327 officers who are 65 years of age and upward to 88, which is the age of Brigadier General D. H. Rucker. Four officers are 85, two 84, two 82, three 81, two 80, four 79, twelve 78, nine 77, sixteen 76, fourteen 75, fourteen 74, ten 73, twenty 72, fifteen 71, twenty-six 70, forty-one 69, thirty 68, twenty-nine 67, thirty-three 66 and forty 65.  
The oldest officer in the army now living, Brigadier General Daniel H. Rucker, was appointed to the army from civil life in 1857. He was brevetted for gallant and meritorious conduct at the battle of Buena Vista. The next oldest officer of the army and the oldest living graduate of West Point is Major William Austine of the class of 1838, who was brevetted for gallantry at the battles of Contreras and Churubusco. Among the other officers of the retired list who are veterans of the Mexican war are Generals Wilcox and T. J. Wood, Colonels Getty, L. P. Graham, John P. Hatch, Fitz John Porter, L. N. Palmer, M. D. Simpson, James Oakes and Captain N. J. T. Dana.  
Among the surviving Mexican war veterans outside of the regular army are General William B. Franklin of the Union army, who is 77, and General James Longstreet of the Confederate army, who is nearly 81. Among the distinguished generals of the Union army upon the retired list are Lieutenant General Schofield, who is 69; Gen-

erally it is better to have a cow that will give a quart of milk than one that will give a gallon of water. The milk of a cow is not only a source of food, but it is also a source of wealth. The cow that gives a quart of milk a day will give you a quart of milk a day, and a quart of milk a day will give you a quart of milk a day. The cow that gives a gallon of water a day will give you a gallon of water a day, and a gallon of water a day will give you a gallon of water a day. The cow that gives a quart of milk a day will give you a quart of milk a day, and a quart of milk a day will give you a quart of milk a day. The cow that gives a gallon of water a day will give you a gallon of water a day, and a gallon of water a day will give you a gallon of water a day.

**HOW TO DEHORN.**  
USING A CLIPPER IN ONLY A FRACTION OF A SECOND.

C. S. Briggs in The American Agriculturist describes his system of dehorning cows:  
"My method is to use a clipper which costs complete about \$12. It is better to have two men to do the cutting, as it is desirable to have plenty of power. Then the obstinate ones come just the same. It only requires a fraction of a second for experienced hands to remove a horn. Gentleness should be used, but there for business. A mixture of tar and carbolic acid will keep the flesh away if put on every few days. We use 1 or 2 per cent acid mixed well with the tar."  
DEHORNING A COW.  
with the tar. If dehorning is done in cold weather, the animals should be kept as warm as possible. The method is to catch the animal around the neck with a rope, around the neck with a rope, with about two feet of slack. Then with a clipper, the horns are cut off. The clipper is held in the hand and the horn is cut off. The clipper is held in the hand and the horn is cut off. The clipper is held in the hand and the horn is cut off. The clipper is held in the hand and the horn is cut off.

**Eureka Harness Oil**  
Give Your Horse a Chance!

**CONSUMPTION**  
Do not think for a single moment that consumption will ever strike you a sudden blow. It does not come that way. It creeps in slowly. First you think it is a little cold, nothing but a little hacking cough; then a little loss in weight; then a harder cough; then the fever and the night sweats. Enter stop the disease while it is yet creeping. Better cure your cough today. You can do it with  
**Ayer's Emory Pectoral**

The pressure on the chest is lifted, that feeling of suffocation is removed, and you are cured. You can stop that little cold with a 25 cent bottle; harder coughs will need a 50 cent size; if it's on the lungs the one dollar size will be most economical.

"I confidently recommend Ayer's Emory Pectoral to all my patients. I have used it for thirty years and it has saved many lives."  
—Dr. J. C. Ayer, Lowell, Mass., Jan. 4, 1898. Fort Madison, Iowa.  
Write the Doctor at any time. Address: Dr. J. C. Ayer & Co., Lowell, Mass.

**Richness of Milk.**  
When there is a near prospect of a pretty high standard for milk being established, it is of some interest to learn the conclusions reached bearing on the question as to some of the factors determining the richness of milk by C. D. Smith, after five years' study, and noted in the proceedings of the Society for Promoting Agricultural Science. The conclusions in question are:  
First.—A cow yields as rich milk as a heifer as she will as a mature cow.  
Second.—The milk is as rich in the first month of the period of lactation as it will be later, except perhaps during the last few weeks of the milk flow, when the cow is rapidly drying off.  
Third.—There is little difference in seasons as to the quality of the milk.

**"I Advise"**  
All women who suffer from chronic diseases should use Dr. Pierce's Pink Pills for Pale People.

That is, I advise you to use Dr. Pierce's Pink Pills for Pale People. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good.

While the cows are at pasture the milk is neither richer nor poorer, on the average, than the milk yielded when the cows were on winter feed.  
Fourth.—The milk of a fair sized dairy herd varies little in composition from day to day, and radical variations in this respect should be viewed with suspicion.  
Practical men might do worse than study these conclusions and express their opinions thereupon. We would draw attention on our part to the conclusion regarding seasons in quality of winter fed and pastured milk.  
Land of Butter Makers.  
It is an odd and interesting fact that Denmark, the butter-making country of the world, bought from the United States last year 25,000,000 pounds of oleo oil, with which to make oleomargarine, and that the Danish farmers and butter makers use oleomargarine on their tables. C. M. Pay of Copenhagen, is in the business of importing oleo. He came to Kansas City, says The Star, to see the packing houses and to make business arrangements. The butter of Denmark is known for its excellence throughout Europe. The Danish creameries have learned the scientific way of making the best butter, and the Danish government has passed laws to insure its purity. England last year imported \$4,000,000 worth of butter from Denmark, and yet the Danish farmers spread oleomargarine on their bread. The reason is simply the frugality of the Danish butter makers. The best butter is worth 40 cents a pound. Oleo can be bought for about 35 cents a pound. Therefore, whenever a Danish family eats a pound of oleo it makes 25 cents.

**Working Butter.**  
If the butter is sufficiently solid and at the right temperature, 58 to 60 degrees in summer and two to four degrees warmer in winter, the process of working can be entirely completed before taking from the chums, says a correspondent of The National Stockman. Should it not be possible in summer to hold it at a proper temperature and it becomes too soft for final treatment it may be removed to a butter house and placed where it will harden. When the finishing touches may be given.  
It is entirely needless to rework butter if proper temperature has been secured. All that is needed is a way in which to incorporate the salt and water into the butter. This can be accomplished at one operation further manipulation is not only unnecessary but altogether harmful, since every additional stroke of the indle after that point has been reached serves to break the grain and render the butter unwholesome.  
How to Make Free of Peas.  
One cupful of dried peas soaked overnight and put on the fire with three scant pints of cold water and a stalk of celery. Bring to boiling point and simmer until tender. When done run through a sieve and add a binding of one tablespoonful each of butter and four seasoned with one teaspoonful of salt, one-half teaspoonful of pepper and half a teaspoonful of sugar. Serve with vegetables.  
How to Grease a Griddle.  
The best method of greasing a griddle is to take a bit of salt pork and rub over with a fork. This prevents adhesion and yet does not allow the fat to soak into what is to be cooked.  
How to Make Ashes.  
Cut a rather thick slice from the top of a log and split it in half. Put the pieces on a fire and let them burn together, cut into small pieces.

**"I Advise"**  
All women who suffer from chronic diseases should use Dr. Pierce's Pink Pills for Pale People.

That is, I advise you to use Dr. Pierce's Pink Pills for Pale People. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good. I have used them for many years and they have done me a great deal of good.

**PERSONALITIES.**  
Senator Jones of Nevada is said to be still one of the best rough riders in the state.  
One of ex-President Harrison's ancestors was the Thomas Harrison who served under Cromwell and signed the death warrant of King Charles. On the restoration he was executed in 1660.  
Lord Rowton, who is the literary executor of the late Earl of Beaconsfield, has been visiting the queen, and it is rumored that she has directed him to put off the publication of Beaconsfield's memoirs till after her death.  
Congressman George R. McCallan of New York is regarded as the best story teller in the house, and when there is nothing important before the chamber his desk is the center of a group of members who enjoy a laugh.  
Edmund Haviland Burke, a direct-lineal descendant of Edmund Burke, is again trying to get into the British parliament. Although still a young man, he is somewhat of an actor himself. He has already acted for parliament as a Parnellite, but unsuccessfully.  
Where in the wide, wide world is there such a comic opera name as that of the Ocho Taming of Bungo, who lives in the little island of Taveuni in the Solu group. One could almost get the name alone to make it one of the members that Bungo is postmaster of Bungo.  
M. Fernand de Rodryz, the editor of the Paris Figaro, who has been made a knight of the Legion of Honor, is a member of the council of the president of the Paris press. He has had the chief editorial control of the Figaro since the death, a few years back, of M. Magnard.  
The official reporters on the exhibition have been selected and named to deal with their respective departments. M. Charles Bizard with section of the fine arts, M. Louis Bizard with the section of the decorative arts, M. Michel Lory with manufactures, M. Glide with social economy and M. Diercke with colonization.  
Governor Roosevelt while at Harborside was associated with the Natural History Club, the Art Club, the K. K. society. He was an associate member of the Olive Club and steward of the Harvard Athletic association. At his graduation he served on the class day committee.  
The death of Lord Roberts' son was a terrible blow, and it is telling heavily upon him. To a friend he writes: "He was all we could wish a son to be—a dear, good fellow in every way. I know he is infinitely happier now, but I have often and often wished during the past three months that he could have been with me."

**STAGE GLINTS.**  
Julia Arthur has finally determined that she will go on sailing next season. This season France will again be seen in the late Francis Yonkers' repertory.  
Donna Maria Guerrero is considered by Spaniards to be their foremost historical artist.  
The New York Hall has returned to vaudeville in the fall season she appeared with Francis Wilson.  
The vaudeville "Bachelors" is ready for production, and now he is at work on the musical version of "Quo Vadis."  
The Theatrical Union of Paris, which was formed for the protection of actors and singers in France, now possesses 400 members.  
Walter Clarke's wife, known as Theo Caprice, is to enter a convent. She is a niece of General Post's wife of the British army.  
The Hermitine is the woman dramatist. Her drama is "The Hermitine." It is one of the best of her work and has been written several plays.  
Hall Caine's play of "The Christian" has just been presented in the Isle of Man, with the author's daughter, Lily Hall Caine, in the role of Glory Quayle.  
Walter Jones, the comedian, was married recently in Minneapolis to Mrs. Beatrice C. Palfrey, the daughter of George Champin, the Chicago millionaire.  
Miss Florence Kahn will appear as the chorus in Mr. Richard Mansfield's revival of "King Henry V." The introduction of this character will afford opportunity for some very fine spectacular effects, of which Mansfield intends to make the most.

**ORCHARD AND GARDEN.**  
Thick skinned fruits are the best keepers.  
The quince is a great feeder and requires good cultivation.  
One of the best fertilizers for strawberries is well rotted stable manure.  
Of all fruits the cherry is the least trouble to grow. About all it needs is to be planted and left alone.  
Rich soil is rather more necessary for the quince than for the apple, but the quince is more subject to blight, although in localities the fruit is profitable to grow.  
In evaporating apples it is calculated that one barrel of green apples will produce about 15 pounds of evaporated fruit and that one pound of this is equal to half a peck of the fruit before it is pared or sliced.
